### New generation Sumiboron inserts – an even better way to machine hardened steels

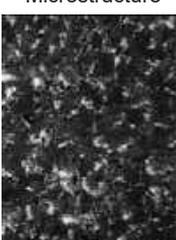

#### ■ General

Building on its global success machining hardened steels with Sumiboron inserts the addition of heat and wear resistant coatings to a variety of tough new CBN substrates has resulted in a new generation of high performance grades. With economy in mind the new inserts are multi cornered.

Choose the coated insert suitable for your application and take your hard part machining operations to the new industry standard.

#### ■ Types and Application

Type	ISO	Grade	Application	Characteristic	Hardness Hv (GPa)	TRS (GPa)
Microstructure  Uncoated CBN	H	<b>BN1000</b>	High speed Continuous cutting	Best wear resistance grade and suitable for high speed continuous cutting	27–31	0,90–1,00
		<b>BN2000</b>	Continuous and Interrupted cutting	Micro-grain CBN with Ceramic binder improves fracture toughness and wear resistance	31–34	1,05–1,15
		<b>BNX25</b>	High efficiency cutting (Continuous–Interrupted)	Binder with high heat resistance improves tool life during high speed machining	31–33	0,95–1,10
		<b>BNX25</b>	High speed Interrupted cutting	Superior fracture toughness in high speed cutting and suitable for high speed interrupted hard turning	29–31	1,00–1,10
		<b>BN350</b>	Interrupted cutting (Heavy)	Micro-grain CBN with higher fracture toughness that improves cutting edge strength	33–35	1,20–1,30
Microstructure  Coated CBN	H	<b>BNC2010</b>	High precision continuous cutting	New generation TiCN layer improves notch wear resistance and provides an excellent surface finish.	30–32	1,10–1,20
		<b>BNC100</b>	High speed continuous and light interrupted cutting	High speed finishing grade for continuous and light interrupted cutting applications	29–32	1,00–1,10
		<b>BNC160</b>	High precision continuous cutting	High precision grade for continuous cutting - ideal when an excellent surface finish is required	31–33	1,10–1,20
		<b>BNC2020</b>	High efficiency general purpose	New coating technology offers excellent adhesion during both continuous and interrupted cut applications.	34–36	1,20–1,30
		<b>BNC200</b>	Continuous and Interrupted cutting (Light–Medium Interrupted)	General purpose grade with low to high speed cutting capability and extended tool life - removes the carburised layer on heat treated components	33–35	1,10–1,20
		<b>BNC300</b>	Interrupted cutting (Heavy)	Tough grade for heavy interrupted cutting applications	33–35	1,15–1,25
		<b>BNC500</b>	GG and GGG machining	For Cast Iron machining with a good balance of wear and fracture resistance	32–34	1,00–1,10
Microstructure  Uncoated CBN	S PM	<b>BN7000</b>	High speed machining of GG Cast Iron machining Iron based products Rolls of high hardness Heat resistant alloy	First choice for high speed finishing of grey cast iron	41–44	1,25–1,35
		<b>BN7500</b>	High efficiency machining of powdered metal	Less burrs when machining sintered parts due to excellent edge sharpness	41–44	1,40–1,50
		<b>BNS800</b>	High speed machining of GG Machining rolls of high hardness Sintered component roughing Special cast Iron machining	High thermal impact resistance with high heat transfer ability and higher CBN content ratio	39–42	0,95–1,10
Binderless CBN 	S K	<b>NCB100</b>	Ultimate CBN grade achieves highly efficient and precise finishing of hard-to-cut materials	Binderless CBN is harder and has better thermal conductivity. Therefore, it enables higher efficiency and longer tool life in machining of hard-to-cut materials, such as titanium alloy and cobalt-chromium alloy.	51–54	1,8–1,9

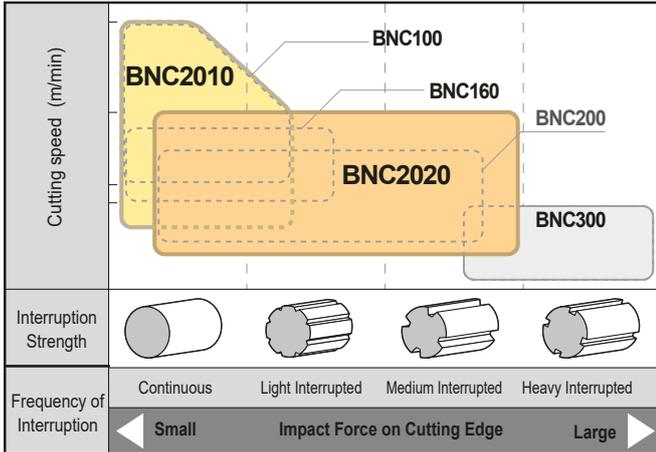

## H

### HARDENED STEEL MACHINING

#### Advantages of using CBN

In terms of cost investment, it is much lower in machine cost and overhead cost due to the fact that a CNC lathe is cheaper than a grinding machine. As for the quality of finish, inserts can machine different profiles and the finishing is also commendable as compared to grinding. Environmentally, sludge treatment for grinding is a hazard to the environment but for turning, the chips can be collected and recycled.

#### Application Range

Application	Conditions	Recommended Cutting Speed (m/min)			
		100	200	300	400
Hardened Steel	General Purpos (Continuous to Light interrupted Rz = above 3,2)	BNC2020 / BNC2010		BNC200 / BNC100	
		BNC300			
	Heavy Interrupted	BNC2010			
	High Precision (Rz = 1,6 to 3,2)	BNC160			
	High Efficiency (Carburized layer removal)	BNC2020		BNC200	
Cast Iron	Ductile Cast Iron	BNC500			

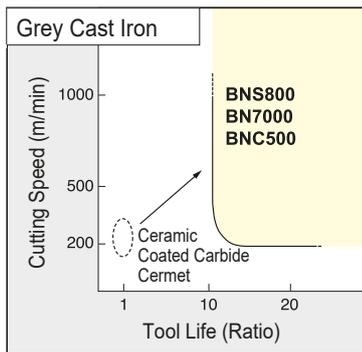

## K

### CAST IRON MACHINING

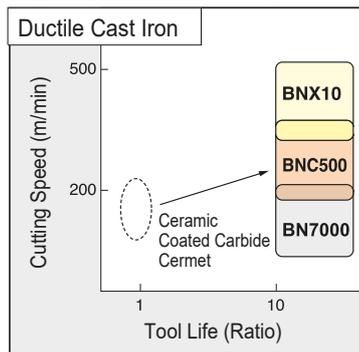

#### Advantages of using CBN

Following charts show merits of using CBN in cast iron machining compared with conventional tools, such as carbide, cermet or ceramics. SumiBoron performs longer tool life than conventional tools in high speed machining and brings higher efficiency and superior precision.

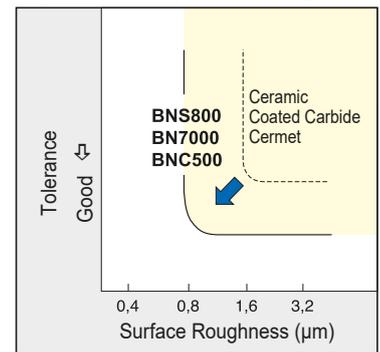

#### High Speed Machining

# Edge Specification of SUMIBORON Inserts

## Sumiboron Inserts and Edge Preparation

All SUMIBORON inserts are enhanced with the optimum cutting edge preparation for various grades and geometries (shown on the right).

This is to avoid cutting edge fracture caused by the heavy loads generated during the machining of high hardness materials such as Hardened Steel.

As the pioneer of CBN tools „SUMIBORON“, various selection of grades and edge preparation combinations is our strong point for Hardened Steel machining.

### Cutting Edge Specification Identification Code

Notation of Edge Preparation			
No.	Standard Type		
L	Low cutting forces	F	Sharp edge
E		E	Honing
E	High efficiency	T	Negative land
H		S	Negative land + honing
WG / WH / W		Wiper	
N-FV / N-LV / N-SV		With Chipbreaker	

### Edge Preparation Identification Code

**S 0 1 2 2 5**

W: Negative land width     $\alpha$ : Negative land angle

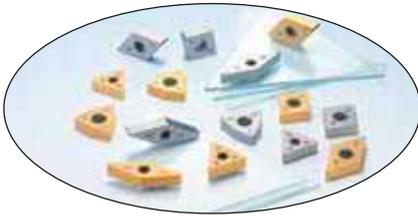

Cutting edge: T - Negative land  
S - Negative land + R - Honing

Example: **S01225**  
→ 25°/0,12 mm width negative land with honing

SUMIBORON

## Insert Types and Cutting Edge Geometries

### Multi Cornered One-Use Type Inserts

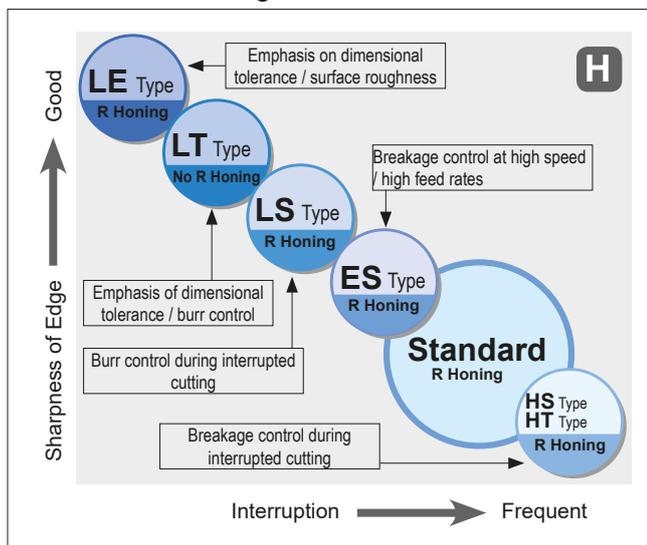

#### ■ Characteristics

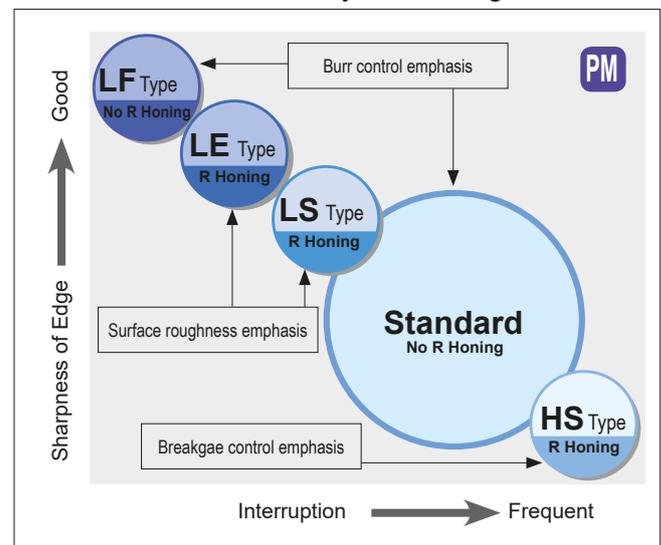

- One-use type inserts improve machining efficiency by using each cutting edge to its full potential following the numbering system on each cutting edge then throwing the insert away.
- Multi cornered inserts have a single piece of Sumiboron mounted on every useable corner. Single sided inserts use the top corners whilst double sided inserts use both top and bottom corners. Diamond shaped inserts have 4 corners and triangular inserts have 6 corners.
- A variety of Sumiboron coated grades readily replace expensive grinding operations for high precision tolerances outstanding surface finish, heavy interrupted cutting and efficient cost effective machining of hardened parts.

### Cutting Edge Preparation

#### Machining of Hardened Steel

#### Sintered Alloy Machining

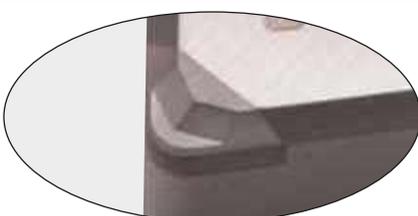

### One-Use Wiper Insert

#### ■ Characteristics

- New lineup includes:
  - WG Type ⇨ for low-feed cutting
  - WH Type ⇨ for high-feed cutting
- SUMIBORON one-use insert with wiper edge for hardened steel machining
- Excellent surface finish similar to grinding
- Improved efficiency with higher speeds and feeds

### Break Master N - FV, N - LV, N - SV

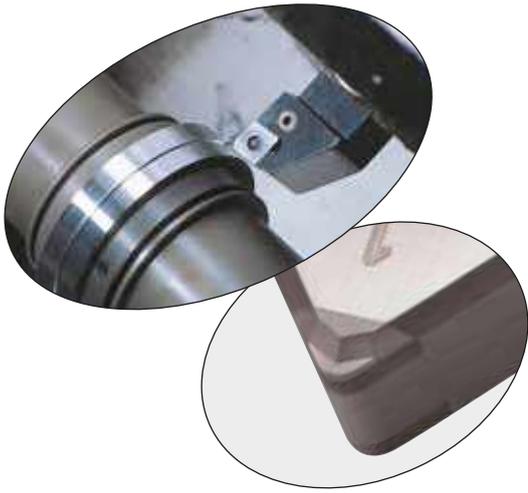

Break Master N-SV Type

#### ■ Characteristics

- N-SV type is perfect for carburised layer removal while N-FV / N-LV types are best suited to finishing of hardened steel.
- First CBN insert to feature an integral chipbreaker
- Ideal for removing carburised layer - can be used on both hardened and unhardened materials.
- Effective chip control solution protects component from swarf damage.

# SUMIBORON Insert With Chipbreaker Break Master N-FV /-LV /-SV

**H** Hardened Steel

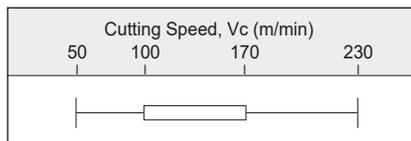

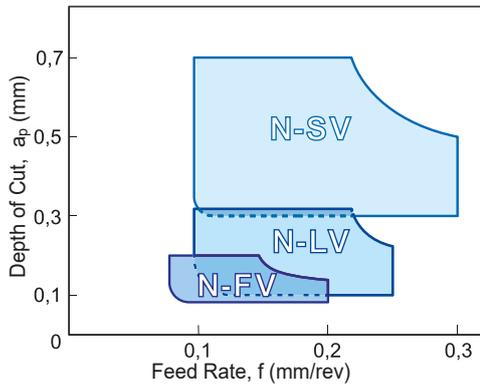

## Characteristics

- SUMIBORON one-use insert with chipbreaker.
- N-SV type is perfect for carburised layer removal while N-FV/N-LV types are best suited to finishing of hardened steel.
- Breaker included on the CBN edge, chipbreaking effect can be maintained throughout machining process.
- Unique breaker design can be applied to both hardened and non-hardened parts with effective chip control.
- SV type lineup now includes BNC2010/BNC160 for good wear resistance, while SUMIBORON BNC2020/BNC200 allows high efficiency machining.

In addition to general purpose SUMIBORON BNC2020/BNC200, the

- N-FV / N-LV type lineup includes BNC2010/BNC160 for excellent wear resistance and general purpose uncoated SUMIBORON BN2000.

## Application Range

\* When machining heat treated steel harder than H<sub>R</sub>C50 the depth of cut should not exceed 0,5 mm.

## Application Examples

External Carburised Layer Removal	
<p>No constant stopages or incorrect part dimension problem and the chips are small.</p> <p>Double the tool life of competitor's CBN</p> <p>Work material: 42CrMo4, Carburised steel (shaft) Insert: CNGG 120408 N-SV NC4 (BNC200) Conditions: <math>v_c = 150</math> m/min, <math>f = 0,15</math> mm/rev, <math>a_p = 0,5</math>mm, x 2 passes, wet</p>	<p>Break Master N-SV Tool life = 200 pcs</p>
	<p>BNC200 (no breaker) Tool life = 200 pcs</p>
	<p>Comp. CBN (no breaker) Tool life = 100 pcs</p>

Carburised Face Layer Removal	
<p>Break Master N-SV type improves chip control with increased productivity until the pre-set tool life.</p>	<p>Break Master N-SV: No chip control problem (relative productivity ~1.4)</p> <p>No breaker: Constant chip control problem (relative productivity 1.0)</p> <p>No. of pcs / unit of time (relative)</p>
	<p>Work material: 42CrMo4 (HRC30-62) Insert: CNGG 120408 N-SV NC4 (BNC200) Conditions: <math>v_c = 140</math> m/min, <math>f = 0,15</math> mm/rev, <math>a_p = 0,3</math> mm, wet</p>

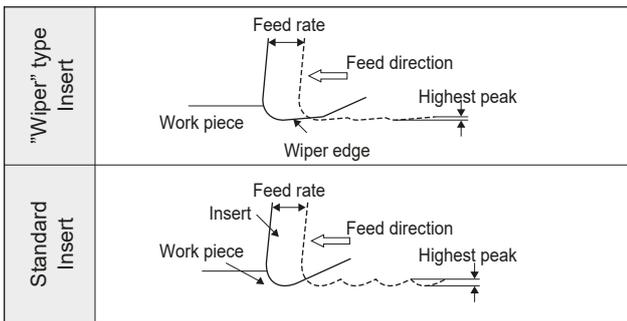

### Characteristics

- SUMIBORON one-use insert with wiper edge for hardened steel machining
- Excellent surface finish similar to grinding
- Improved efficiency with higher speeds and feeds
- New lineup includes:
  - WG** type ⇨ for low-feed cutting
  - WH** type ⇨ for high-feed cutting

### Purpose of Wiper Edge

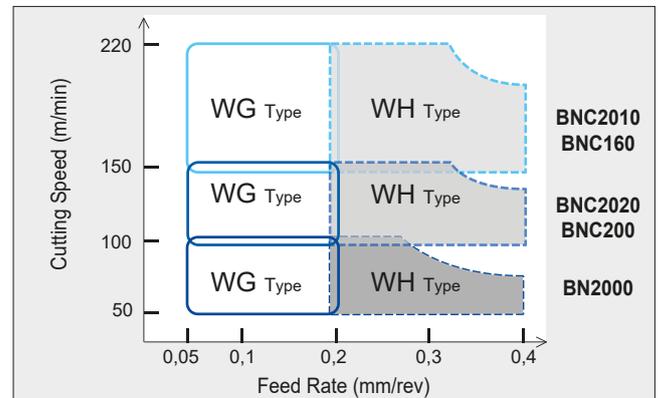

### Surface Roughness of Wiper Insert

	"Wiper" Insert (RE 0,8)		Standard Insert (RE0,8)	
	Finishing (f = 0,10 mm/rev)	High feed cutting (f = 0,30 mm/rev)	Finishing (f = 0,10 mm/rev)	High feed cutting (f = 0,30 mm/rev)
Surface Roughness Profile	<b>WG</b> Type	<b>WH</b> Type		
Surface Roughness Rz	0,63 µm	1,39 µm	1,98 µm	9,20 µm

### Recommended Cutting Conditions (Surface Roughness Standard: Rz = 1,6–3,2 µm)

- For optimum effectiveness, use wiper inserts for continuous cutting.
- For copy turning, inserts with nose-radius is recommended.
- Chattering and undulation may occur, please use work and machine with high rigidity.

Two types are available depending on the feed rate:  
 WG type: Recommended feed rate: less than  $f \leq 0,20$  mm/rev  
 WH type: Recommended feed rate: more than  $f \geq 0,20$  mm/rev  
 Range of good surface roughness:  $R_z = 1,6 \mu\text{m}$  to  $3,2 \mu\text{m}$   
 Available grades: BN2000, BNC2010, BNC160, BNC2020, BNC200

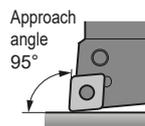

### Tool-Setup WG / WH Wiper

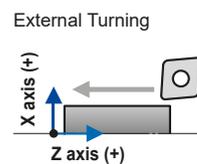

#### CNGA / CCGW / WNGA Type Wiper

1. Use a holder with a 95° approach angle.
2. Tool compensation required.

CNGA / CCGW / WNGA type wiper inserts do not follow the ISO standard. Correction of the tool offset of the cutting edge as explained on the right.

#### Cutting Edge Position Compensation, Outer Processing

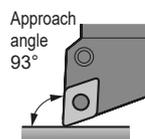

Nose Radius	Type	X-Direction	Z-Direction
RE 0,4	WG	-0,02	-0,02
	WH	-0,06	-0,06
RE 0,8/1,2	WG	-0,01	-0,01
	WH	-0,06	-0,06

#### DNGA / DCGW Type Wiper

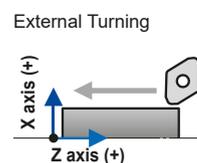

1. Use a holder with a 93° approach angle.
2. Tool compensation required.

DNGA / DCGW type wiper inserts do not follow the ISO standard. Correction of the tool offset of the cutting edge as explained on the right.

Note: DNGA/DCGW type wiper inserts are only possible for external and internal turning, not for facing.

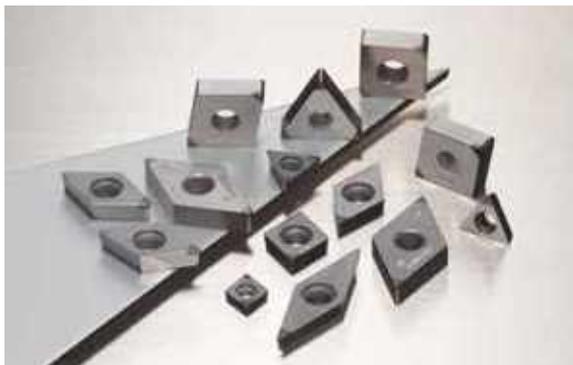

#### Cutting Edge Position Compensation, Outer Processing

Nose Radius	Type	X-Direction	Z-Direction
RE 0,4	WG	-0,17	-0,01
	WH	-0,70	-0,06
RE 0,8	WG	-0,05	0
	WH	-0,58	-0,05

# Uncoated SUMIBORON BN1000/BN2000

**H** Hardened Steel

## Uncoated CBN grades for hardened steel machining

### General Features

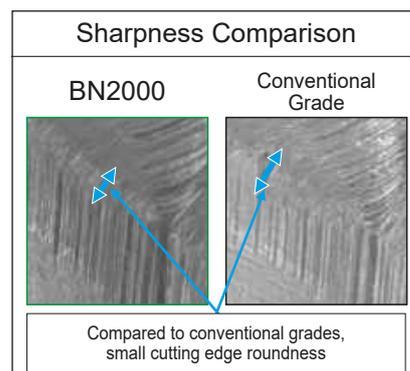

A new uncoated type of SUMIBORON that has a newly developed high-purity ceramic binder.

Both fracture and wear resistance are combined to achieve a stable tool life in a wide variety of hardened steel machining.

Available in single corner and multi-corner type inserts.

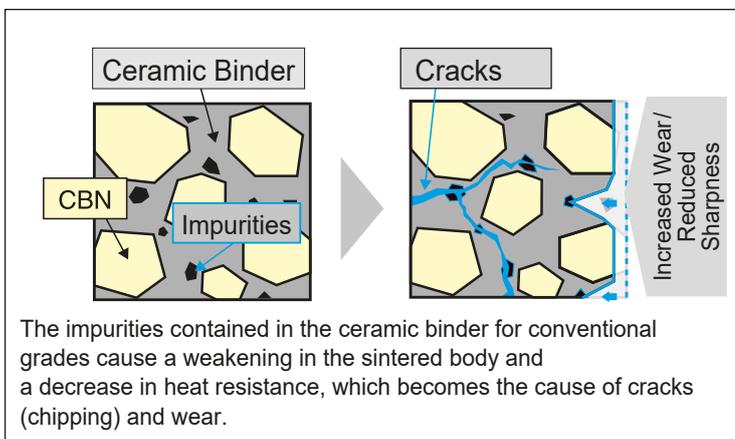

### Characteristics

- BN1000** - Superior high-speed machining grade with the highest wear resistance of any uncoated SUMIBORON. Delivers excellent tool life in continuous cutting to light-interrupted cutting.
  - Improved fracture resistance while also emphasizing wear resistance.
  - Improved hardness and heat resistance from the high-purity TiCN ceramic binder.
- BN2000** - General purpose grade suitable for typical hardened steel machining applications. Provides stable tool life in everything from continuous cutting to light-to-medium interrupted cutting.
  - High degrees of both fracture resistance and wear resistance.
  - Significant improvements in the performance of both by employing a high-purity ceramic binder.
  - Stable surface roughness by increasing sharpness (Figure on right).

BNC100

BNC160

BNC200

BNC300

BNC500

### New Coated SUMIBORON Series achieving

- higher speed
- higher efficiency and
- higher precision

### ■ General Features

Using a high heat resistant and tough CBN substrate coupled with a special ceramic coating, this series caters to a wide variety of applications with improved precision and longer tool life as compared to conventional CBN.

There is a comprehensive lineup of economical and easy-to-use insert selection, such as the cost effective double-sided, multi-cornered, one-use type inserts.

BNC2010 and BNC2020 are the latest additions to the Coated SUMIBORON series, to provide even better stability and longer tool life for hardened steel machining.

### ■ Characteristics

**Double sided, Multi-cornered One-use Insert**  
More cost effective than conventional one-use inserts.

**Easy Edge Management**  
Numbering of cutting edges.

**Strong Brazing**  
Utilizing a new brazing method with improved strength.

**Special Ceramic Coating and Newly Developed CBN Substrate**  
Provides longer tool life.

### ■ Cutting Performance

Application		Conditions	Recommended Cutting Speed (m/min)				
			100	200	300	400	
Hardened Steel	Finishing	General Purpos (Continuous to Light interrupted Rz = above 3,2)	BNC2020 / BNC2010		BNC200 / BNC100		
			BNC300				
	High Precision (Rz = 1,6 to 3,2)	BNC2010				BNC160	
		High Efficiency (Carburized layer removal)	BNC2020		BNC200		
Cast Iron	Ductile Cast Iron		BNC500				

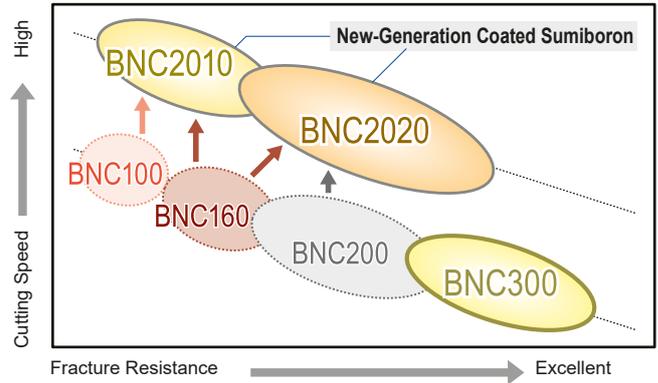

### ■ Cutting Edge Management

Before usage

After usage

The edge numbers are still visible after machining, which makes the management of used cutting edges easy.

BNC2010 and BNC2020 are coated in gold, which makes it easy to distinguish used edges.

## Characteristics of Grades

### BNC2010

CBN Content: 50 ~ 55 %  
 Grain Size: 2 μm  
 Hardness HV: 30 ~ 32 GPa  
 TRS: 1,10 ~ 1,20 GPa  
 Main Coating Components: Multi-layered TiCN  
 Coating Thickness: 1,5 μm

High Precision Machining

Newly developed CBN substrate with high crater wear resistance coated with special multi-layered TiCN, which exhibits excellent notch wear resistance. Ideal for finishing of hardened steel requiring excellent accuracy or surface roughness. Able to stably maintain 1,6 R<sub>z</sub> finishing.

### BNC2020

CBN Content: 70 ~ 75 %  
 Grain Size: 5 μm  
 Hardness HV: 34 ~ 36 GPa  
 TRS: 1,20 ~ 1,30 GPa  
 Main Coating Components: Multi-layered TiAlN  
 Coating Thickness: 1,5 μm

General and High Efficiency Cutting

Newly developed tough CBN substrate with highly wear resistant TiAlN coating. Provides improved stability by inserting a highly adhesive layer between the substrate and the TiAlN layer. Ideal for general machining including finishing and interrupted cutting as well as high-efficiency machining such as carburised layer removal.

### BNC100

CBN Content: 40 ~ 45 %  
 Grain Size: 1 μm  
 Hardness HV: 29 ~ 32 GPa  
 TRS: 1,05-1,15GPa  
 Main Coating Components: TiAlN/TiCN  
 Coating Thickness: 2,5 μm

High Speed Cutting

### BNC160

CBN Content: 60 ~ 65 %  
 Grain Size: 3 μm  
 Hardness HV: 31 ~ 33 GPa  
 TRS: 1,10-1,20GPa  
 Main Coating Components: TiAlN/TiCN  
 Coating Thickness: 2,0 μm

High Precision Machining

### BNC200

CBN Content: 65 ~ 70 %  
 Grain Size: 4 μm  
 Hardness HV: 33 ~ 35 GPa  
 TRS: 1,15-1,25GPa  
 Main Coating Components: TiAlN  
 Coating Thickness: 2,0 μm

General and High Efficiency Cutting

### BNC300

CBN Content: 60 ~ 65 %  
 Grain Size: 1 μm  
 Hardness HV: 33 ~ 35 GPa  
 TRS: 1,15-1,25GPa  
 Main Coating Components: TiAlN  
 Coating Thickness: 1,0 μm

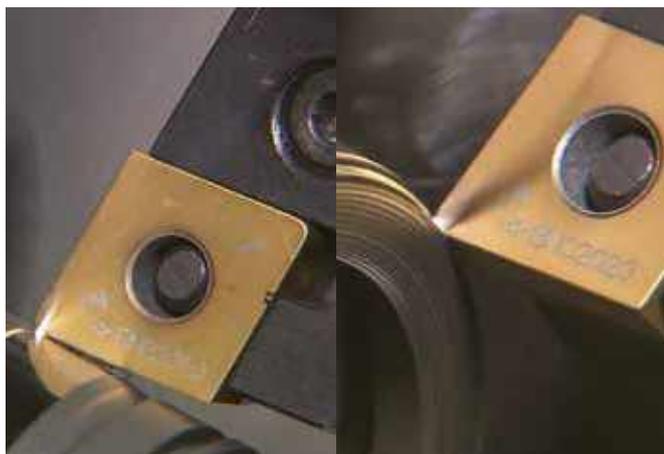

Heavy Interrupted Cutting

### ■ Characteristics

#### BNC2010 - High Precision

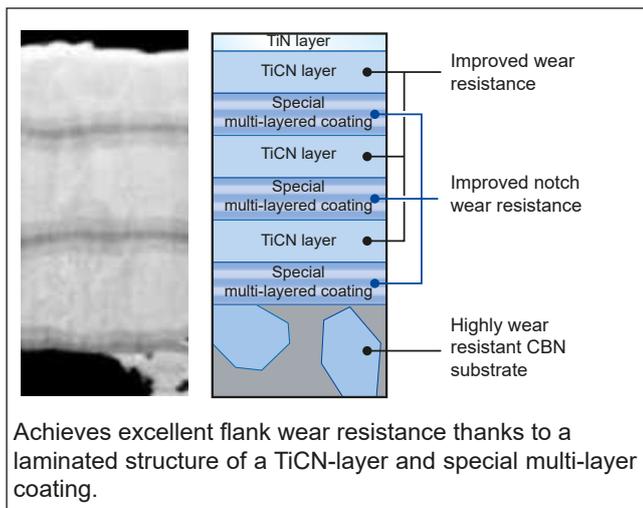

A grade for high-precision machining applicable for finishing requiring good surface roughness and dimensional accuracy. Provides further improved wear resistance thanks to a newly developed CBN substrate coated with a TiCN layer. Reduces flank wear and achieves excellent surface finish thanks to newly developed special stable multi-layered coating.

#### BNC2020 - General Purpose & High Efficiency

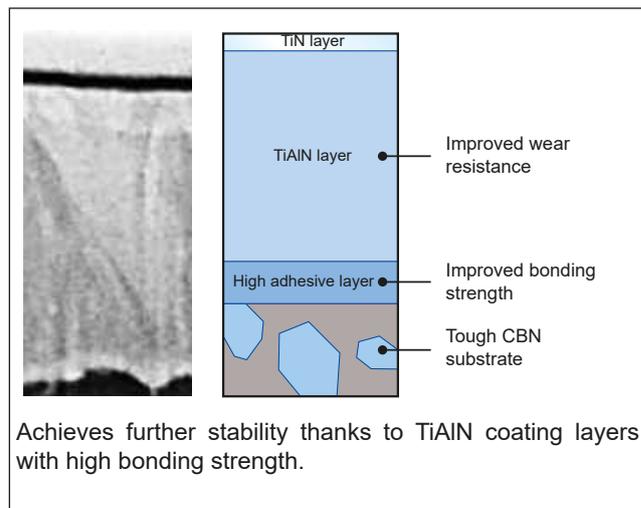

A general-purpose grade applicable to general hardened steel machining. A newly developed tough CBN-substrate coated with a highly wear-resistant TiAlN layer. Achieves more stable machining and longer tool life by employing a highly adhesive layer for high chipping resistance.

## Cutting Performance

### BNC2010

Work Material: 15CrMo5, 58-62HRC, Continuous  
 Insert: DNGA150408NC4 (BNC2010)  
 Cutting Edge Treatment: S01225  
 Cutting Conditions:  $v_c = 160$  m/min,  $f = 0,08$  mm/rev,  $a_p = 0,1$  mm, wet

### BNC2020

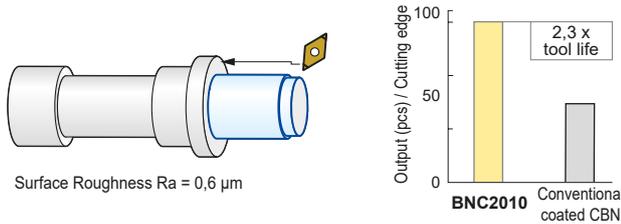

Work Material: SCM415-5V, 58-62HRC, Interrupted  
 Insert: CNGA120412NC4 (BNC2020)  
 Cutting Edge Treatment: S01225  
 Cutting Conditions:  $v_c = 130$  m/min,  $f = 0,1$  mm/rev,  $a_p = 0,6$  mm, dry

## Application Example

### Continuous External Turning of Main Shaft

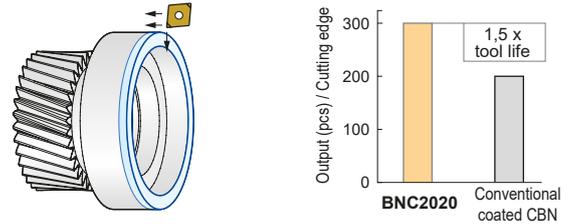

BNC2010 provides excellent wear resistance and achieves excellent surface roughness.

Insert: DNGA150408NC4 (BNC2010)  
 Cutting Conditions:  $v_c = 200$  m/min,  $f = 0,10$  mm/rev,  $a_p = 0,35$  mm, dry

### Carburised Layer Removal for Sun Gears

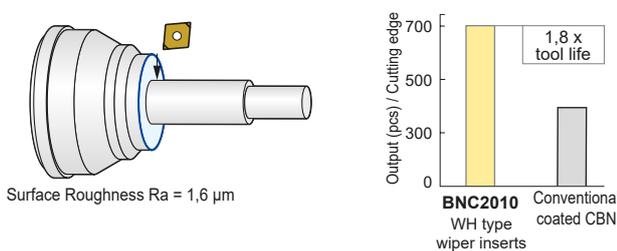

BNC2020 achieves a longer tool life in high load cutting.

Insert: DNGA120408NC4 (BNC2020)  
 Cutting Conditions:  $v_c = 100$  m/min,  $f = 0,15$  mm/rev,  $a_p = 0,5$  mm, wet

### Facing of CVJ Outer Race

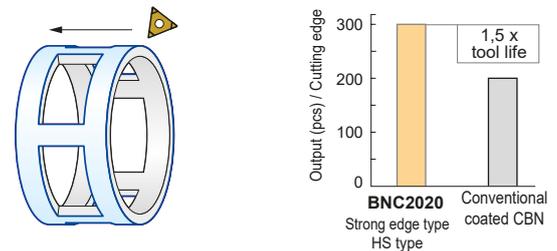

BNC2010 with a WH type wiper insert maintains excellent surface finish for an extended time.

Insert: CNGA120412NCWH2 (BNC2010)  
 Cutting Conditions:  $v_c = 150$  m/min,  $f = 0,2$  mm/rev,  $a_p = 0,2$  mm, dry

### Interrupted Machining of CVJ Cage Window

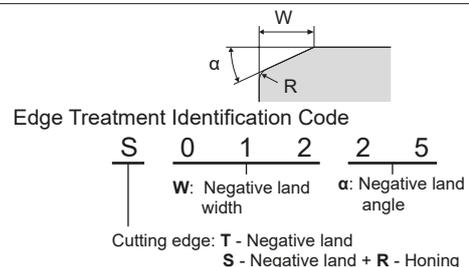

BNC2020 strong edge HS type provides stable performance in interrupted cutting.

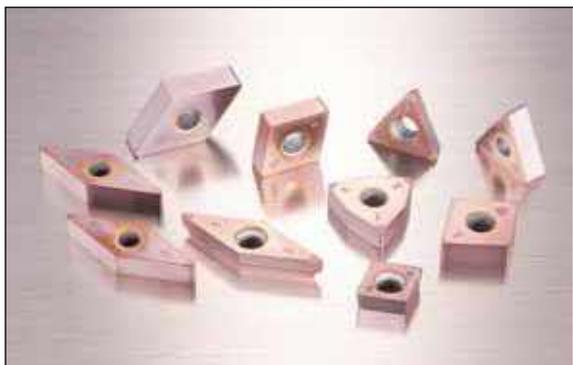

Insert: TNGA160420HSNC3 (BNC2020)  
 Cutting Conditions:  $v_c = 120$  m/min,  $f = 0,10$  mm/rev,  $a_p = 0,15$  mm, dry

## Cutting Edge Preparation

Grade	General Edge Treatment	Strong Edge Type: HS
	Edge Treatment	Edge Treatment
BNC2010	S01225	S01730
BNC2020	S01225	S02735

### Coated Sumiboron premium grade for high speed machining of hardened steels

#### General Features

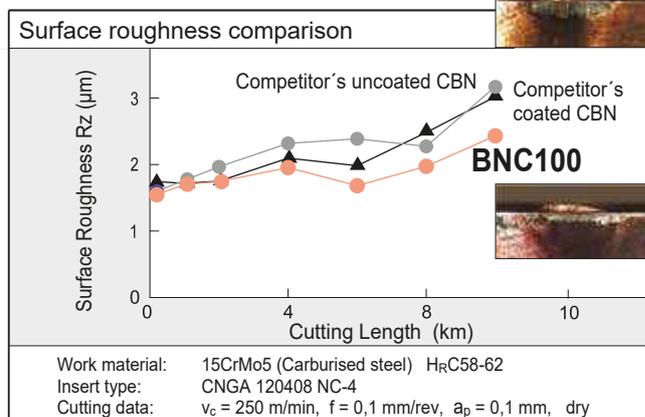

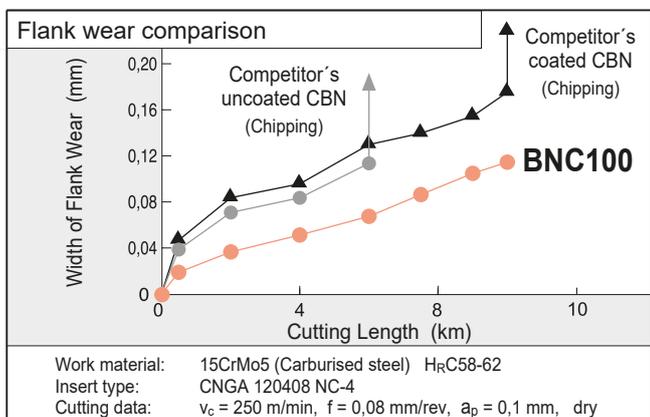

Our copper coloured Sumiboron grade BNC 100 resists premature plastic deformation of the cutting edge by withstanding the high temperatures that occur when machining hardened steels. This new grade features a heat resistant CBN substrate and a special TiCN based ceramic coating to enhance surface finish across a broad range of finishing applications at elevated cutting speeds.

Ideal for higher speed machining and suitable for continuous or light interrupted cuts BNC100 delivers reliable performance and excellent tool life

#### Advantages

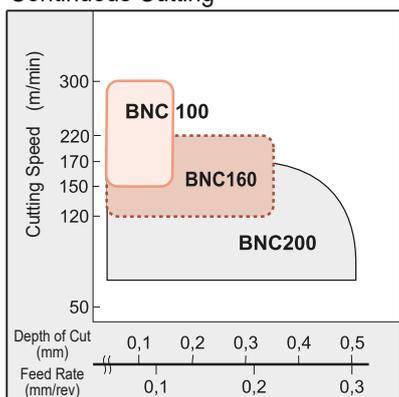

- High speed machining!  
Suitable for continuous to light interrupted high speed cutting with  $v_c = 150 \sim 300$  m/min.
- Extended tool life!  
Wear resistant ceramic coating and tough CBN substrate considerably extends tool life.
- Excellent surface finish!  
A consistent surface finish to values less than 6,3 Rz is easily achieved on both continuous and light interrupted cut applications.

#### Performance

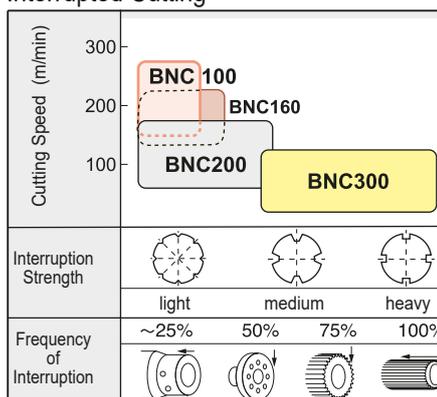

#### Application Range

##### Continuous Cutting

##### Interrupted Cutting

#### Recommended Cutting Conditions

$v_c$ (m/min)	$f$ (mm/rev)	$d_{oc}$ (mm)
100 - 300	0,03-0,2	0,03-0,3

Coolant ... Continuous cutting: dry or wet  
 Interrupted cutting: dry

**High precision machining with surface finishes down to 1,6 Rz possible thanks to smooth coating!**

■ **General**

Use the copper coloured Sumiboron grade BNC160 to improve surface integrity as well as machining accuracy. The TiCN based smooth surface ceramic coating and the newly developed Sumiboron substrate enhances edge strength and wear resistance making high precision machining with surface finishes as low as 1,6 Rz readily achievable.

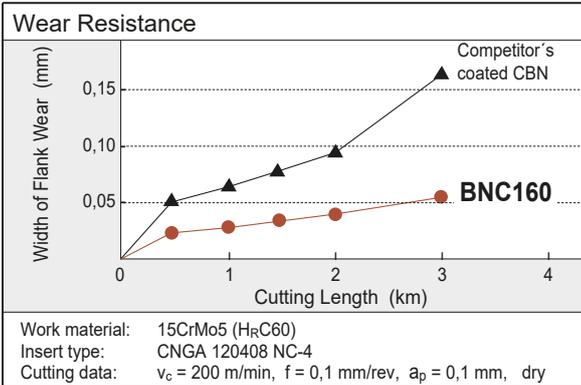

This new grade is ideal for turning components that previously relied on precision grinding machines for final machining.

■ **Advantages**

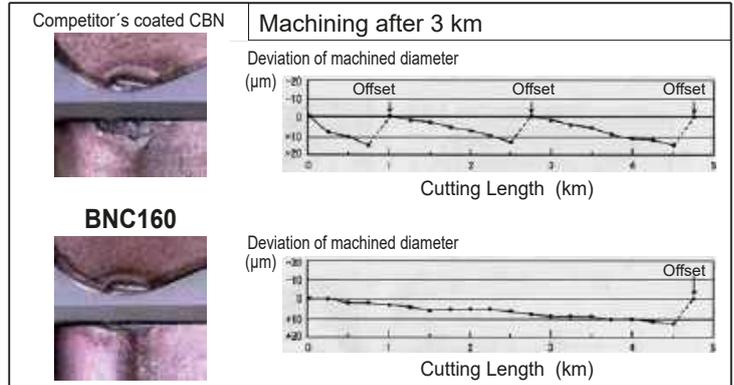

- **Excellent surface roughness!**  
A consistent surface roughness is maintained for hours because wear at the boundary is so gradual.
- **High Precision Machining**  
High precision work previously ground, can now be turned.
- **Enlarged scope of application!**  
A wider range of hardened steels can be cut using Sumiboron the result being high productivity on close tolerance machining applications.

■ **Performance**

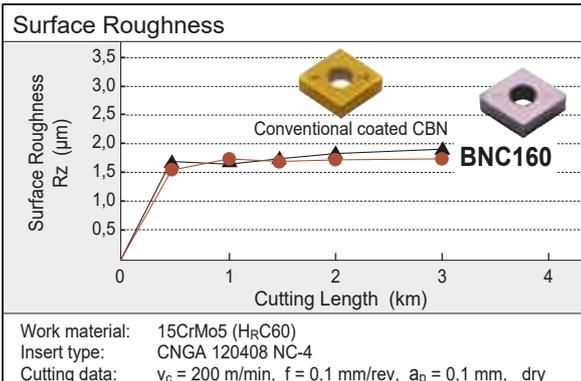

**Continuous Cutting**

**Machining Accuracy**

**Continuous Cutting**

■ **Recommended cutting Conditions**

v <sub>c</sub> (m/min)					f (mm/rev)	d <sub>oc</sub> (mm)
120	150	200	220	250		
----- ----- ----- ----- -----					0,03–0,2	0,03–0,35

Feed rate and nose radius are set such that the theoretical surface roughness is 1/2 to 1/3 of the required surface roughness.

Coolant ... Continuous cutting: Dry or Wet  
Interrupted cutting: Dry

Most suitable for high speed finishing !

### Excellent wear and fracture resistance! Predictable tool life on a wide range of applications!

#### General

Our silver coloured Sumiboron insert grade BNC200 offers safe reliable cutting and predictable tool life.

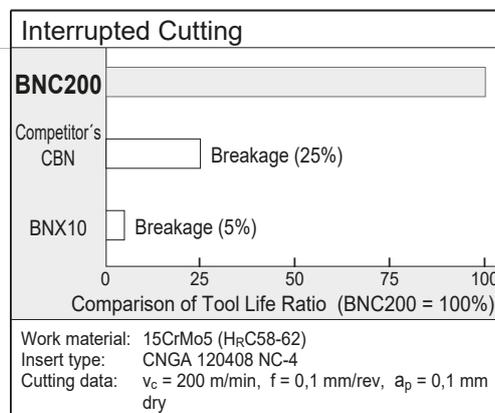

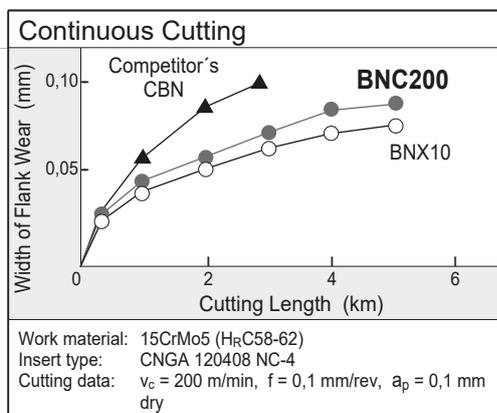

The newly developed cutting material with enhanced edge strength is coated with TiAlN based ceramic for excellent wear resistance and realises extended tool life even when interrupted cutting.

This grade is especially suitable for medium speed machining of carburised surfaces.

#### Advantages

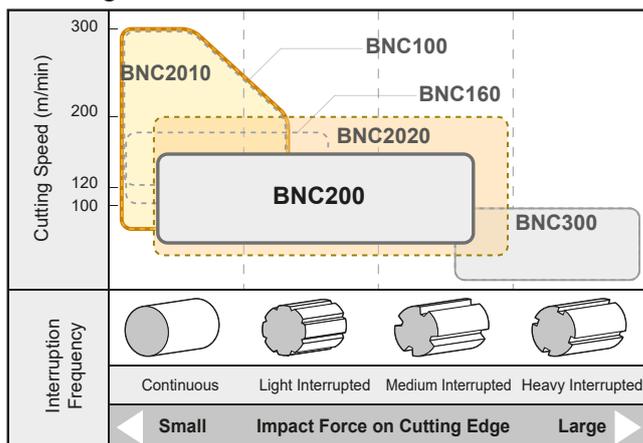

- Predictable tool life!  
Extended tool life is realised even when high speed cutting thanks to excellent wear resistance.
- Wide range of applications!  
Sumiboron is suitable for a wide range of applications eg. from low to high speed interrupted cutting.
- The newly developed brazing technology maximises edge strength making Sumiboron suitable for interrupted and continuous cutting.

#### Performance

- BNC200 features excellent wear resistance comparable with BNX10, plus outstanding fracture resistance.

#### Application Range

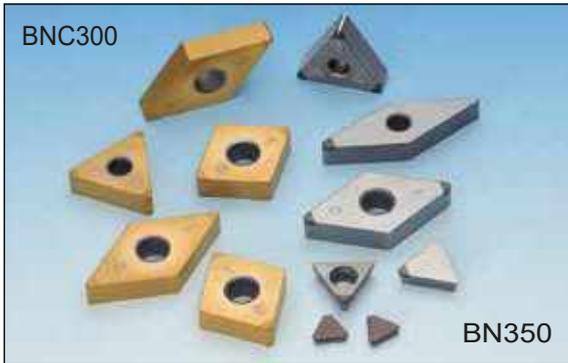

#### Recommended Cutting Conditions

$v_c$ (m/min)	$f$ (mm/rev)	$d_{oc}$ (mm)
50 80 170 220	0,03-0,25	0,05-0,5

Coolant ... Continuous cutting: dry or wet  
Interrupted cutting: dry

Can be used in a wide range of applications from low to high speed operation.

**The ultimate grades BNC300 and BN350 in interrupted machining of hardened steel**

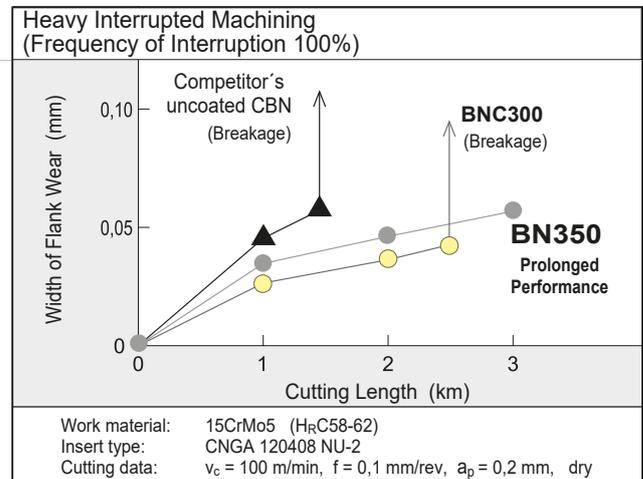

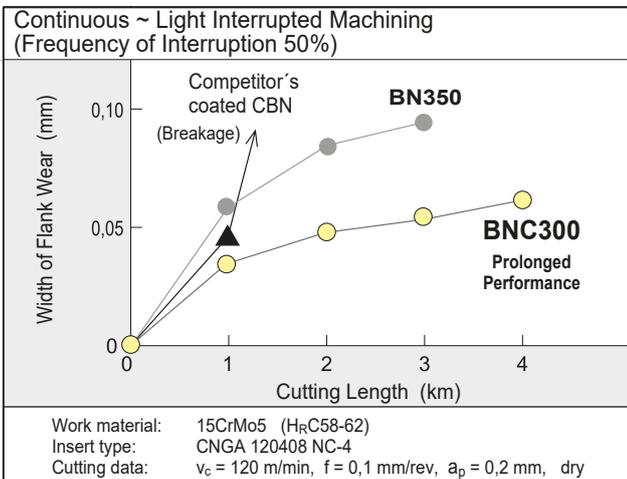

■ General Features

- **BNC300**  
CBN substrate that emphasizes on toughness coupled with a highly wear resistant TiAlN based coating layer that has improved adhesion strength. With a good balance of fracture and wear resistance, stable and longer tool life can be achieved in interrupted cut or in a mixture of continuous and interrupted cutting.
- **BN350**  
SUMIBORON series highest fracture resistance and toughest CBN. Reliable grade for achieving stable tool life in heavy interrupted cutting conditions.

■ Characteristics

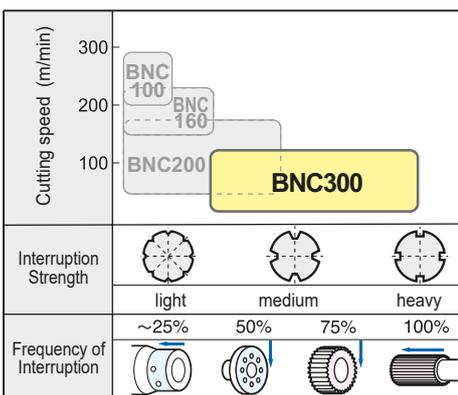

- BNC300**
- Stable and long tool life in interrupted cutting  
Achieving stable and long tool life in heavy interrupted cutting, with superior fracture resistance.
  - Superior dimensional precision  
Good adhesion strength, TiAlN based, high wear resistance coating. Achieving superior dimensional precision even in interrupted cutting.
  - Suitable for different types of workpieces  
Achieving significantly longer tool life even on workpieces that have a mixture of continuous and interrupted cutting.
- BN350**
- Stable and long tool life in interrupted cutting  
Stable and long tool life with superior fracture resistance, that prevents fractures which commonly occurs during interrupted cutting.

■ Performance

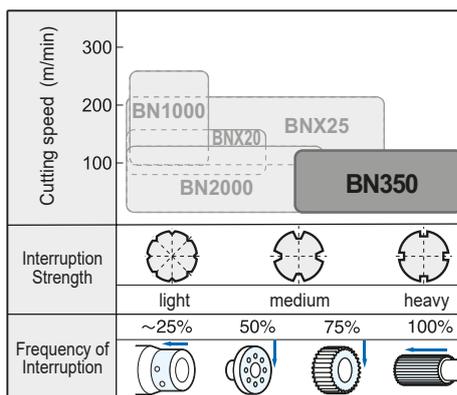

■ Recommended Application Range

Coated SUMIBORON

Uncoated SUMIBORON

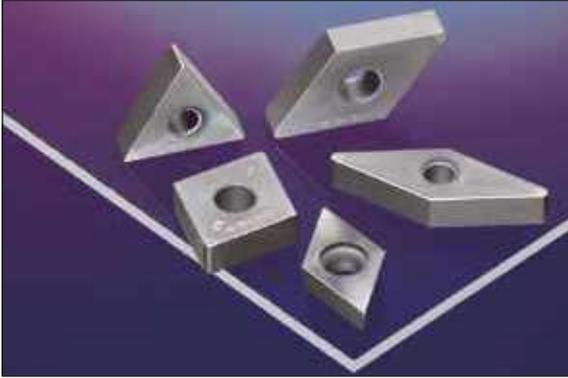

■ Recommended Cutting Conditions (BNC300, BN350)

## Coated CBN grade for ductile cast iron machining

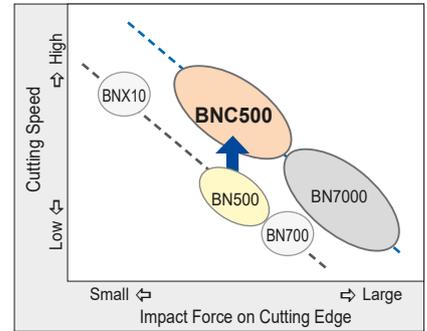

### General Features

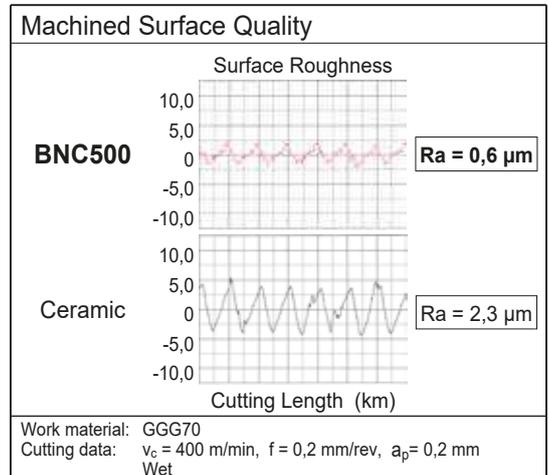

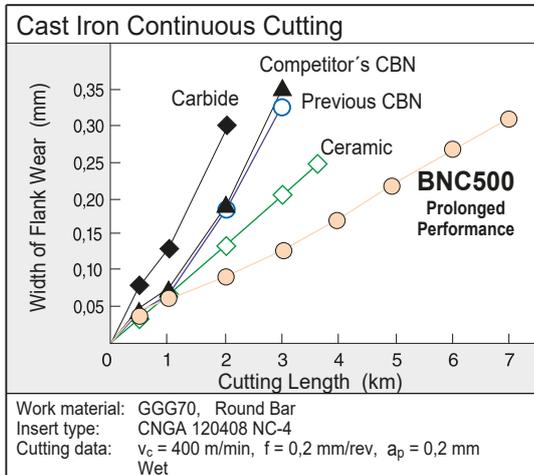

Further improvements in the toughness of the sintered CBN and wear resistance from the application of a newly developed high-purity TiC binder. In addition, it demonstrates exceptional wear resistance by combining a ceramic coating with excellent heat resistance. High-speed and high-precision machining is achieved when finishing ductile cast iron. It also provides a long, stable tool life in machining high-strength ductile cast iron, special cast irons such as vermicular cast iron, and centrifugal cast iron.

### Characteristics

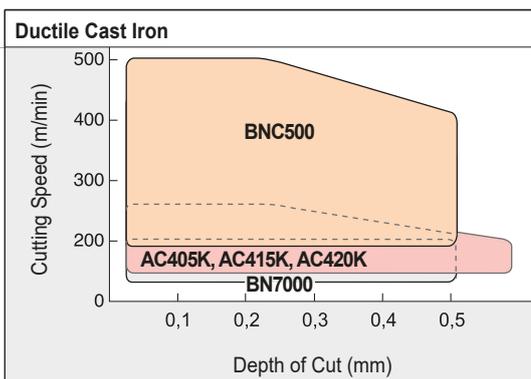

- Achieves a Long, Stable Tool Life at  $v_c = 400$  m/min  
Superior wear resistance, makes stable machining possible under high-speed conditions.
- Supports High-precision Machining  
Can maintain excellent dimensional tolerance and surface roughness.

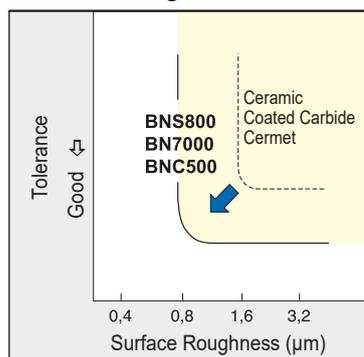

### Cutting Performance

### Application Range

### High Precision Machining

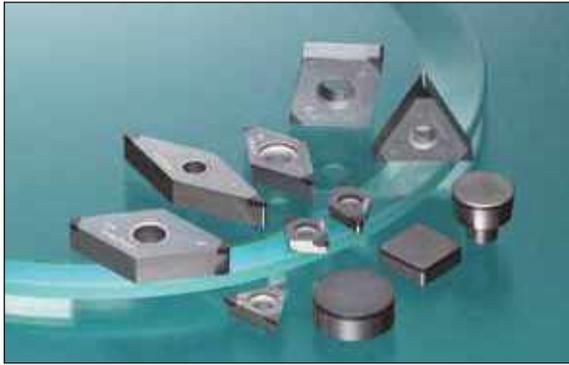

### Recommended Cutting Conditions

$v_c$ (m/min)	
100	200
[Graph showing recommended cutting speed range]

\* Coolant ... Wet

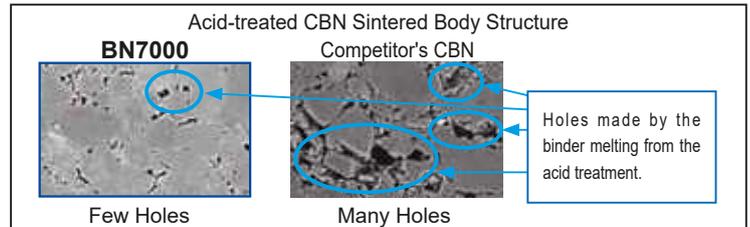

## Uncoated CBN grade for high-speed finishing of cast iron, powdered metals, and difficult-to-machine materials!

### General Features

Medium-grain CBN sintered to a high density to achieve the maximum content percentage.

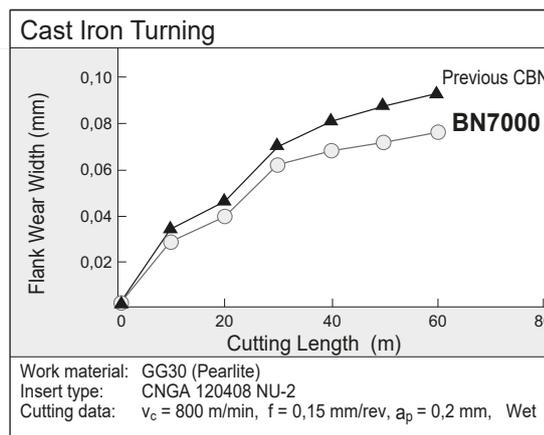

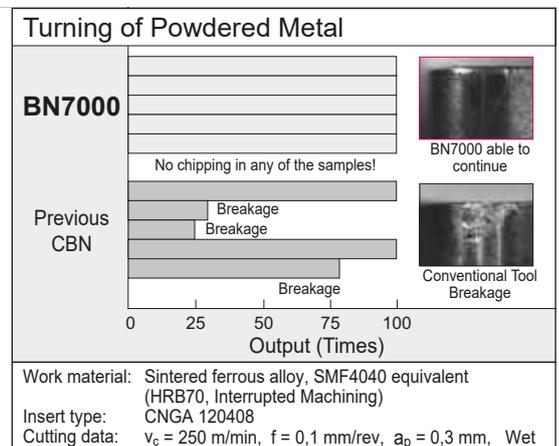

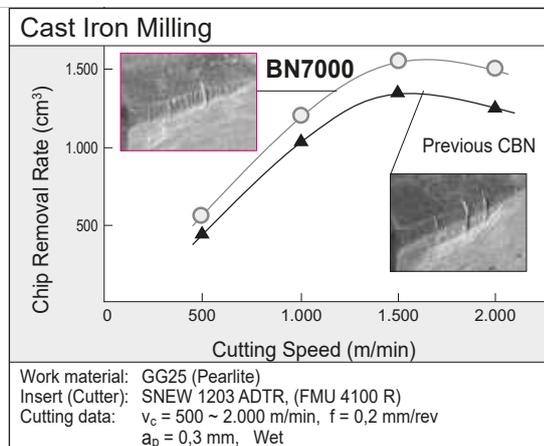

Also delivers superior fracture resistance by increasing the binding strength between CBN particles. Provides stable, long tool life for high-speed finishing work with cast iron, powdered metals, and difficult-to-machine materials.

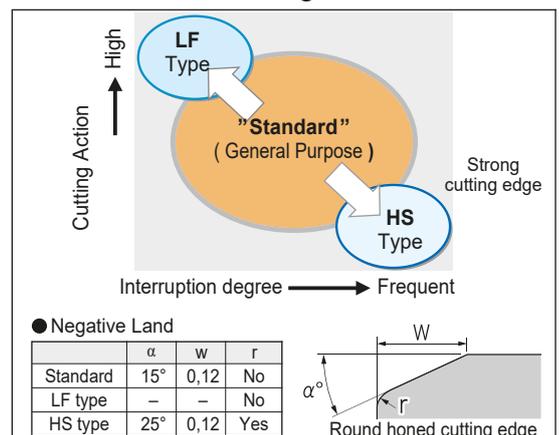

### Characteristics

- Excellent for high speed finishing of Cast Iron!  
Good wear and fracture resistance in high speed machining of Grey Cast Iron.
- High efficiency machining of powdered metal  
With 4 different types of edge treatment, stable and long tool life can be achieved from machining of Sintered Alloys of any shape or hardness.
- Able to machine any Exotic Metals.  
Long tool life can also be achieved for the machining of exotic materials such as Roll, HSS and Heat-Resistive Alloy etc.

### Cutting Performance

### Recommended Edge Treatment

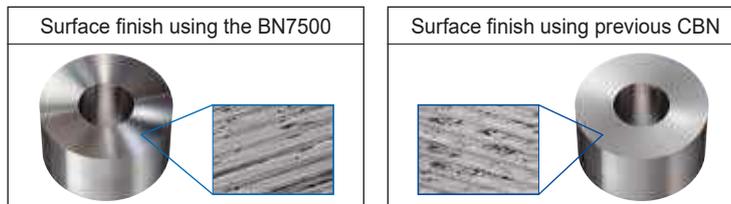

## Uncoated CBN grade for high precision and high efficiency machining of powdered metal

### General Features

High density sintered material made of micro-grained CBN grains provide excellent sharpness and wear resistance for high quality surfaces in sintered alloy finishing.

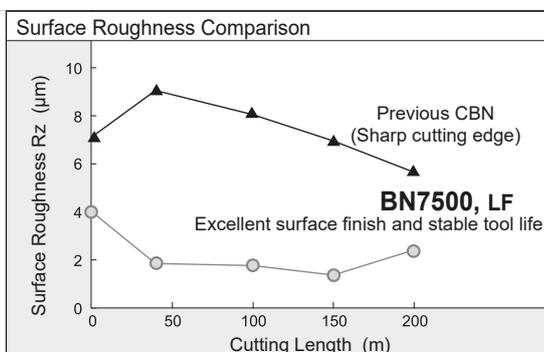

The previous CBN left white blemishes on the finished surface whereas the BN7500 leaves a better, glossy surface finish.

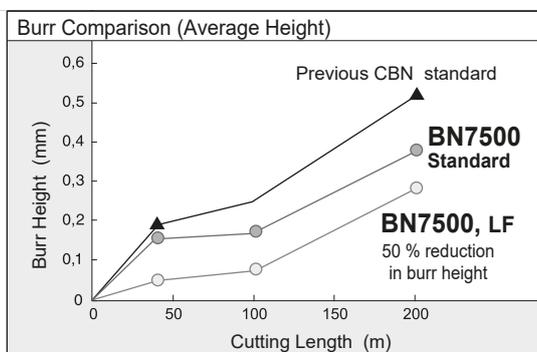

### Characteristics

- Excellent for finishing of powdered metal  
Excellent machined surface finish and surface appearance.
- Available with 5 different types of edge treatment for machining sintered alloys of any shape or hardness  
The LF type has a sharper edge designed specifically for machining sintered alloys with minimal burr and improved machining precision.  
The HS Type has a strengthened cutting edge for stable chipping resistance during interrupted cutting and finishing.

### Cutting Performance

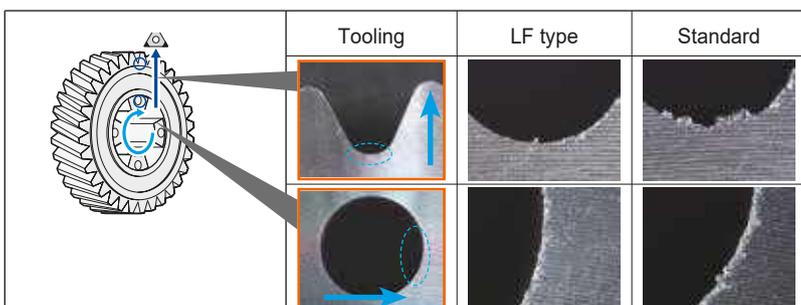

Work Material: Sintered ferrous alloy, SMF4040 equivalent (HRB70, Continuous cut)  
Insert: CNGA 120408 LF-NU2  
Cutting Data:  $v_c = 200$  m/min,  $f = 0,1$  mm/rev,  $a_p = 0,1$  mm, wet

Work Material: Sintered ferrous alloy, SMF4040 equivalent (HRB70, Continuous cut)  
Insert: CNGA 120408 LF-NU2  
Cutting data:  $v_c = 200$  m/min,  $f = 0,1$  mm/rev,  $a_p = 0,1$  mm, wet

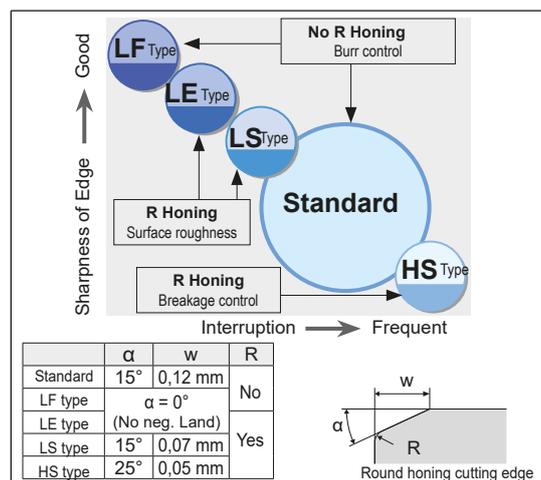

### Feed and Burr Relationship

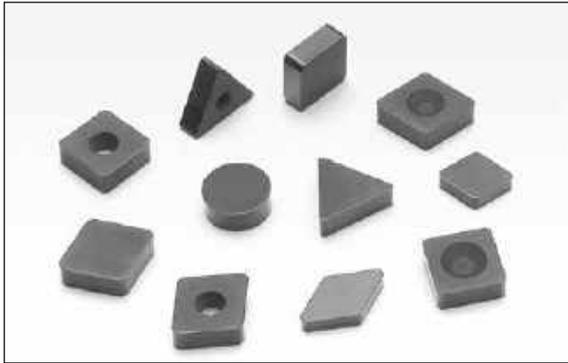

The LF Type without negative land has a cutting edge sharpness superior to the standard type and can control burrs better.

Work Material: VVT Facing  
Insert: TNGA 160404 NU3  
Cutting Data:  $v_c = 200$  m/min,  $f = 0,1$  mm/rev,  $a_p = 0,1$  mm, wet

### Recommended Edge Treatment

## Solid CBN grade for high speed rough and finish machining of cast iron

### General

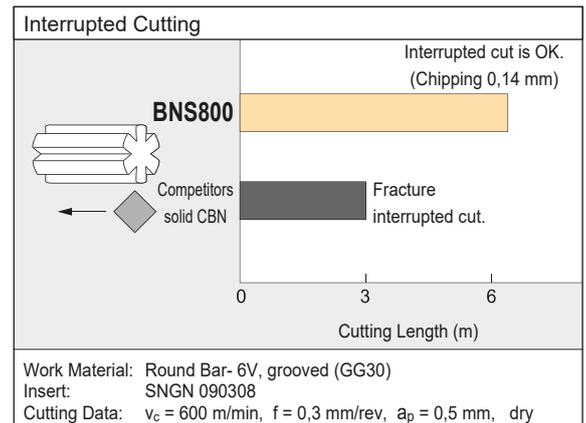

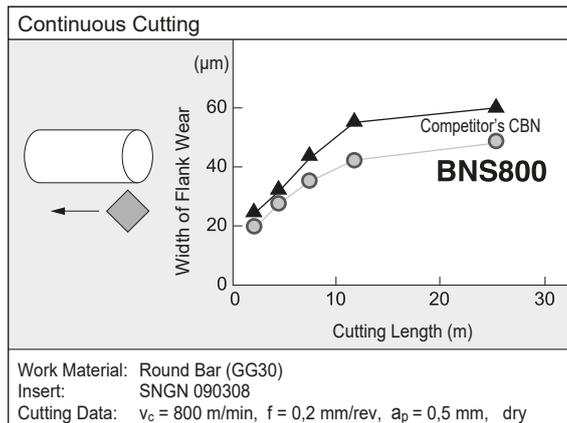

Solid CBN grade with high content CBN and special binder phase provide high fracture toughness and high thermal conductivity.

Solid inserts for roughing with high depth of cut and also for finishing of cast iron and alloyed cast iron at wet and dry conditions.

### Advantages

- High wear resistance !  
High CBN-content and special binder phase provide a excellent wear resistance and a tight dimensional control in finish machining.
- High edge stability !  
High thermal conductivity of BNS800 and high edge stability provide a long tool life at wet and dry machining.

# SUMIBORON Binderless NCB100

Cemented Carbide

Brittle Materials

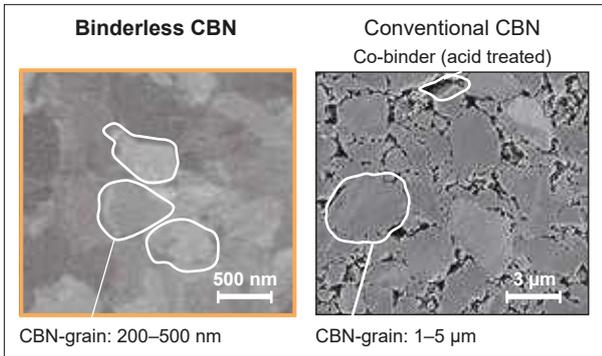

## ■ Features

SUMIBORON Binderless is a polycrystalline cubic boron nitrid (CBN) that directly binds nanometer- or sub-micron-level CBN particles without binder materials.

Binderless CBN is harder and has better thermal conductivity. Therefore, it enables higher efficiency and longer tool life in machining of hard-to-cut materials, such as titanium alloy and cobalt-chromium alloy.

## ■ Mikrostructure of Sintered Body

## ■ Physical Properties

	Binderless CBN	Conventional CBN
CBN Content (%)	100	90–95
Binder Material	–	WC–Co
Hardness (GPa)	51–54	41–44
Thermal Conductivity (W/m·K)	180–200	100–120

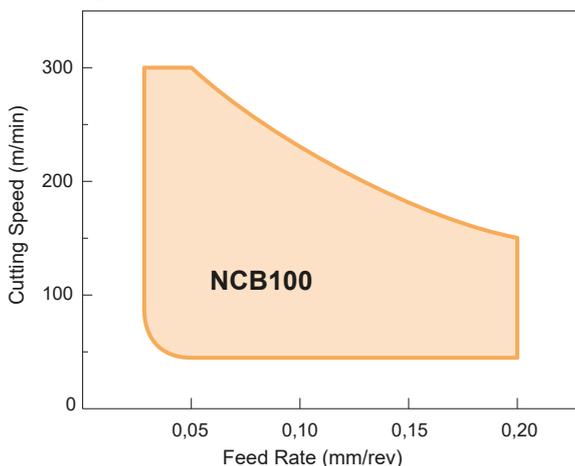

## SUMIBORON Binderless CBN

### ■ Advantages

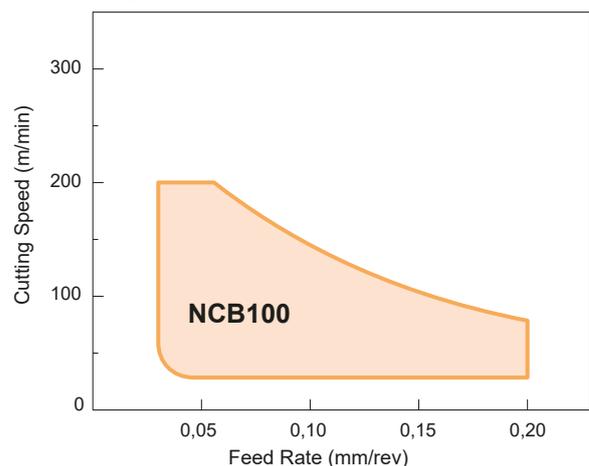

- Higher efficient machining and longer tool life have been realized by the effects of higher hardness and thermal conductivity than conventional CBN grades.
- Achieves high precise machining and better surface integrity because of less adhesion by not containing any binder materials.
- Ideal tool material for high-efficient finishing of hard-to-cut materials, such as titanium alloy and cobalt-chromium alloy, cemented carbides and cermets.
- NBC100 is able to maintain excellent dimensional accuracy and surface roughness for a long period.
- Shows improved work efficiency and cost reduction by less frequency of exchanging inserts compared to conventional tool grades.

# SUMIBORON / SUMIDIA Production Process

## ■ General

Since 1970s, Sumitomo has pioneered the development of sintered cubic boron nitride (CBN) and sintered diamond (PCD) tools successfully used in the tool making industries. These tool materials can be epoch-making in a sense of broadening the cutting application range.

## ■ Production Process

In the production process of **SUMIBORON / SUMIDIA**, CBN powder / diamond powder is firstly synthesized under the ultra - high pressure, and secondly, the synthesized crystalline grains are sintered.

Fig. 2 shows a diagram of high temperature high pressure apparatus for processing the ultra - high pressure sintering operation.

This apparatus is basically composed of a piston and a cylinder to generate ultra - high pressure as high as 5000 N/mm<sup>2</sup> with a special device. The piston and cylinder are made of cemented carbide.

To manufacture final products round discs of SUMIBORON and SUMIDIA material are cut into specific shapes and brazed on to tool bodies made of cemented carbide, or steel, etc., and after that finished by grinding the edge. In another process the final product can be obtained only by cutting blanks and finishing them.

Fig. 1

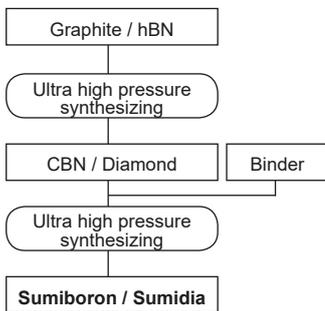

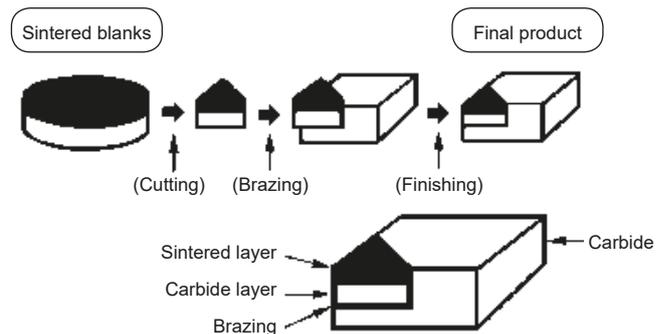

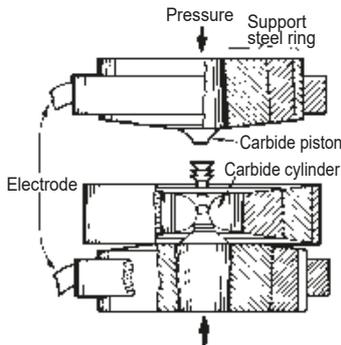

Fig. 2

## ■ SumiBoron / SumiDia Grinding Method

Items		SumiBoron	SumiDia
Grinding machine	-	1) Carbide grinding machine is applicable. 2) R Pointer should be used. 3) Should be wet grinding.	1) Special-purpose high rigidity grinding machine is desirable. 2) Be sure of applying with wet system.
Wheel	Abrasive	Diamond	Diamond
	Grain size	D 25 - medium, D20 - fine (#400-800)	Rough grinding: D 35 (#400 mesh) Finish grinding: D 25 (#800-1500 mesh)
	Bond	Resinoid or vitrified	Special-purpose metal bond for diamond sintered tool or vitrified
	Concentration	100	100-125
	Dressing	Use #400 WA stick	Execute dressing with a WA stick of about 400 mesh.
Grinding condition	Wheel speed	800-1000 m/min.	800-1000 m/min.
	Table cycle	30-60 cycles/min.	30-60 cycles/min.
	Grinding oil	Water soluble grinding coolant oil	Water soluble grinding coolant (Solution type)
Others	-	1) Check chipping of the cutting edge with microscope after finishing. 2) Blank surface cut by EDM should be ground more than 0,05 mm	1) Rake surface is lapped generally 2) Inspect with microscope of magnification of 30-50 times if there is edge chipping. 3) Edge treatment of tool should be sharp for cutting non-ferrous metals. 4) Remove the wire-cut surface of blank by 0,05 mm or more in grinding operation.

# SUMIDIA Series

## General Features

SUMIDIA sintered diamond series has 3 grades (DA1000, DA150, DA90) with individual features depending on the optimum combination of diamond particle size and binder, as well as the NPD10 grade (nano-polycrystalline diamond) where nano-order diamond particles are directly bound with high strength without using binders.

This series is suited to a wide range of applications from machining of aluminium alloy to machining of hard brittle materials and cemented carbide.

## Series • Features • Application

Grade	Features	Application	Average size of Diamond grains (µm)	Hardness Hv	TRS (GPa)
SUMIDIA	DA1000	High density sintered material made of ultra-fine diamond particles that demonstrates optimum wear resistance and excellent edge sharpness.	< 0,5	50 ~ 60	≈ 2,60
	DA150	Micro-grained sintered diamond grade with strong diamond-to-diamond bonding. It is suitable for the machining of non-ferrous metals and other very hard materials.	5	50 ~ 60	≈ 1,95
	<b>New!</b> DA90	Contains coarser diamond particles than other grades, giving it good wear resistance suitable for the machining of carbides and high-silicon aluminium. Shows the highest diamond content for excellent wear resistance.	< 50	50 ~ 60	≈ 1,10
SUMIDIA Binderless	NPD10	A 100% diamond grade made by nano-level diamond grains with direct conversion sintering. Has the highest wear resistance and fracture resistance and the best edge sharpness.	< 0,05	120 ~ 130	≈ 3,15

## Application Range

Machinability	Work Material	Turning		Milling	Example Part
		Roughing	Finishing		
Good ↑ ↓ Difficult	Sintered aluminium	DA1000		Milling	Cylinder liner
	Die cast aluminium (ADC12)				Transmission case, oil pan, cylinder block, aluminium wheel
	Low silicon (AC2B-T6, AC4C-T6)				Cylinder head
	High silicon (T6)				Cylinder block
					DA150

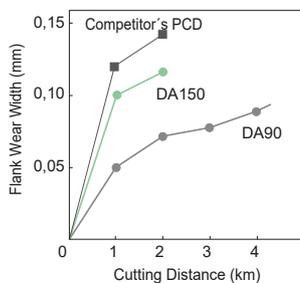

## Aluminium

## Non-Aluminium

Machinability	Work Material	Turning		Milling	Example Part
		Roughing	Finishing		
Good ↑ ↓ Difficult	Non-ferrous sintered alloy	DA1000		Milling	Bushing
	Gunmetal carbon				Connection rod
	Carbide	DA90	NPD10		Punches, dies, rolls
	Iron combined	DA90	DA150		Cylinder block, bearing cap

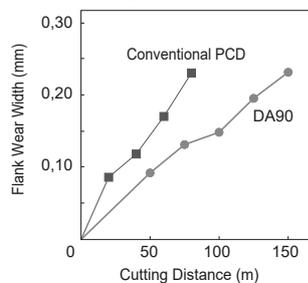

## Cutting Performance

Continuous Cutting

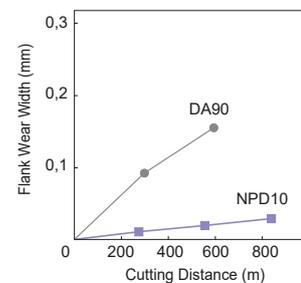

Work Material: MMC (Al-20% SiC)  
Insert: CNMX 120408, Holder: PCLN2525  
Cutting Cond.:  $v_c = 350$  m/min,  $f = 0,2$  mm/rev,  $a_p = 0,18$  mm, wet

Continuous Cutting

Work Material: Cemented Carbide (87 HRA)  
Insert: DCMW 070204 NF  
Cutting Cond.:  $v_c = 20$  m/min,  $f = 0,1$  mm/rev,  $a_p = 0,2$  mm, wet

Continuous Cutting

Work Material: Cemented Carbide (91 HRA)  
Insert: DCMW 11T304 RH (NPD10), DCMW 11T304 NF (DA90)  
Cutting Cond.:  $v_c = 20$  m/min,  $f = 0,05$  mm/rev,  $a_p = 0,05$  mm, dry

## Recommended Cutting Conditions

# SUMIDIA Binderless

## Nano-Polycrystalline Diamond

### ■ General Features

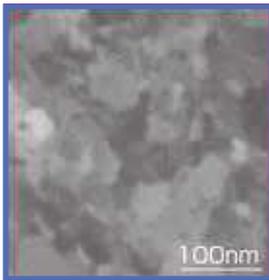

Nano-polycrystalline diamond is a type of polycrystalline diamond, produced by directly binding nano-level diamond grains without using any binders.

This material is unique to our company and as compared to conventional diamond grades containing binders, it exhibits higher strength, excellent wear resistance and fracture resistance.

SUMIDIA Binderless is the series of tools with cutting edges made from this high performance nano-polycrystalline diamond.

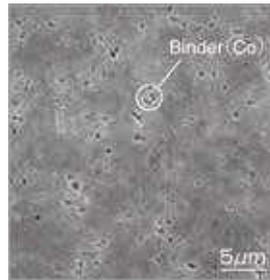

### ■ Micro-Structure Comparison

Nano-Polycrystalline Diamond  
SEM Structure

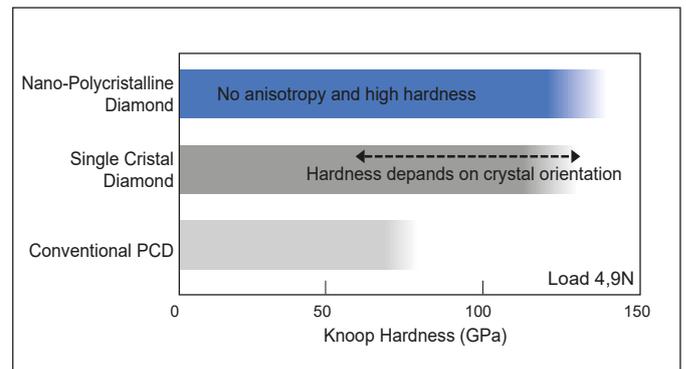

Diamond particle average grain diameter (30 - 50 nm)

Conventional PCD  
SEM Structure

Diamond particle average grain diameter (1 - 10 µm)

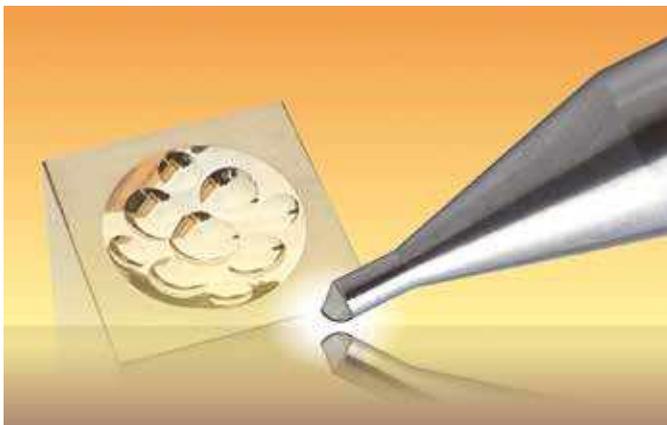

### ■ Hardness

## SUMIDIA Binderless

### ■ Application Examples

- Ballnose Endmill / Radius Endmill (Carbide Machining)

- Indexable Inserts (Carbide Machining)

## General Features

NPD10 is made from high-hardness nano-polycrystalline diamond. This is a pure diamond material, but unlike single-crystal diamonds, it has no anisotropy.

It achieves extended tool life and machining accuracy superior to conventional diamond tools when machining hard brittle materials such as cemented carbide.

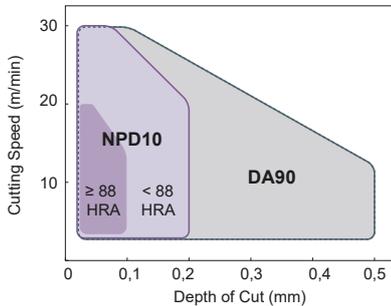

DA90 is a polycrystalline diamond grade in which coarse diamond particles have been sintered to form a dense structure. The high diamond content, with high wear resistance, makes it ideal for roughing of cemented carbide and hard brittle material.

Optimized design and mass production technology have been developed, achieving the same performance as conventional tools with higher cost performance.

## Characteristics

- Ideal for Finishing of Hard Brittle Materials Including Cemented Carbide (NPD10)**  
 High-precision cutting of cemented carbide thanks to the outstanding wear resistance of nano-polycrystalline diamond.
- Superior Dimensional Tolerance Maintained for a Long Time (NPD10)**  
 Tool replacement count can be drastically reduced compared to conventional diamond tools, enabling work efficiency to be improved and total costs to be reduced.
- Ideal for Roughing of Hard Brittle Materials Including Cemented Carbide (DA90)**  
 Stable tool life in sintered surface machining of cemented carbide and roughing of hard brittle materials thanks to the outstanding wear resistance of the coarse-grained polycrystalline diamond.
- Uses SUMIDIA NF Insert (DA90)**  
 Optimized design and mass production technology have been developed, achieving the same performance as conventional tools with higher cost-performance.

## Applicable Range (Cemented Carbide)

## Applications of NPD10 and DA90 (Cemented Carbide)

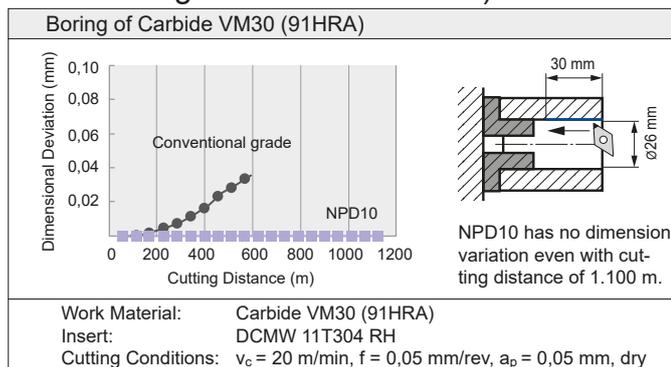

Grade	SUMIDIA Binderless NPD10	SUMIDIA DA90
Dimensional Tolerance	◎ Best	△ The first recommendation is NPD10
Tool Life (Wear Resistance)	◎ Best $a_p \leq 0,2 \text{ mm}, f \leq 0,1 \text{ mm/rev}$	○ $a_p \geq 0,2 \text{ mm}$ can also be used
Sintered Surface Machining of Cemented Carbide	× Impossible	◎ Best
Machined Surface Quality	◎ Best	△ The first recommendation is NPD10

## Recommended Cutting Conditions (Carbide Machining)

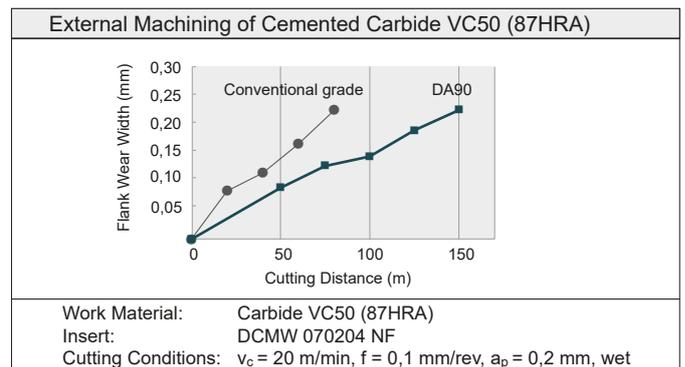

Work Material			Grade	Cutting Conditions			
Class	Hardness (HRA)	SEI Grades		Cutting Speed $v_c$ (m/min)	Feed Rate $f$ (mm/rev)	Depth of Cut $a_p$ (mm/rev)	
VM, VC	40	$\geq 88$	G5, D2	NPD10	5-15-20	0,03-0,05-0,07	0,03-0,05-0,07
VM, VC	70, 60, 50	83 - <88	G7, G6	NPD10	5-20-30	0,03-0,10-0,20	0,03-0,10-0,20
VM, VC	-	$\geq 83$	G7, G6, G5, D2	DA90	5-20-30	0,03-0,10-0,20	0,03-0,20-0,50

Min. - Optimum - Max., Cutting conditions: NPD10: dry, DA90: wet

## Machining Precision of NPD10

## Wear Resistance of DA90

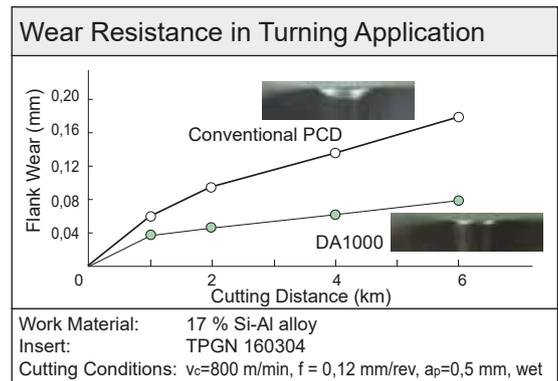

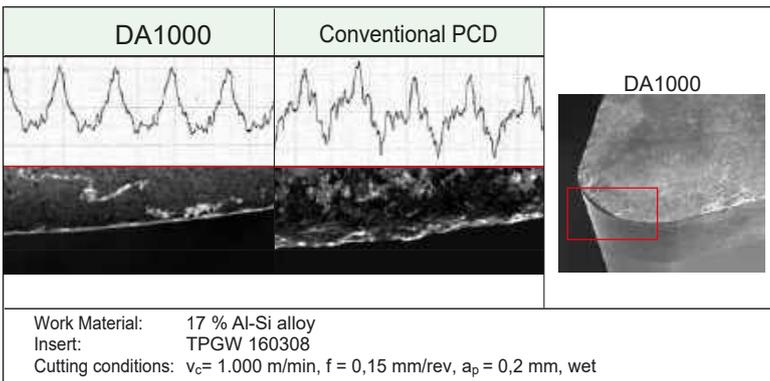

### General Features

SumiDia DA1000 is a high density, ultra fine grained sintered PCD with high toughness similar to that of cemented carbides.

SumiDia DA1000, with its great improvement in fracture resistance, eliminates the breakage problems faced by conventional PCD tools especially during the milling of Aluminium alloys and achieves a longer and more stable tool life.

Furthermore, the NF type inserts makes it even more cost effective.

### Cutting Performance

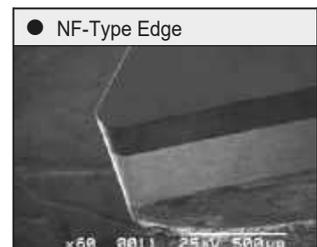

## NF Type Inserts

### General Features

- Total Cost Effectiveness with High Performance and Lower Price
  - Optimum design utilizing improved mass production techniques provides a relatively lower cost.
  - Regrindable type results in huge total cost reduction.
- Wide Application Range
  - Wide range of stocked items for small hole boring, OD turning to milling processes.
  - Negative and positive type inserts that are applicable on standard lever-lock, pin-lock type holders.

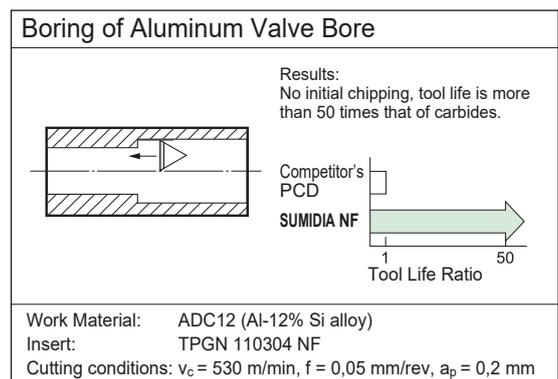

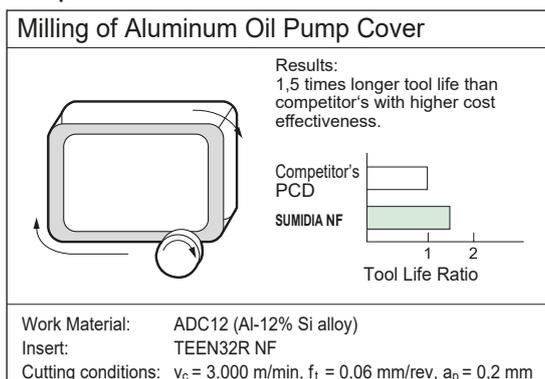

### Efficiency

SumiDia NF-type inserts preserve the excellent basic performance of DA1000 while achieving high cost performance through optimal design and development of mass production technology. These inserts achieve the high performance of SUMIDIA DA1000, including excellent fracture resistance, wear resistance and smooth work material surface finishing.

(NF-type is precision ground just like conventional inserts.)

### Application Examples

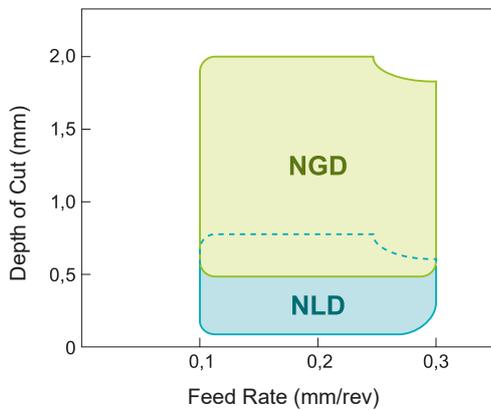

### ■ Characteristics

- Provides excellent chip control in semi finishing and finishing of aluminium alloy.
- Solves chip control problems and dramatically improves work efficiency.
- Achieves stable tool life by employing high toughness grade DA1000.

### ■ Applications Range

Wrought Aluminium Alloy (A6061)

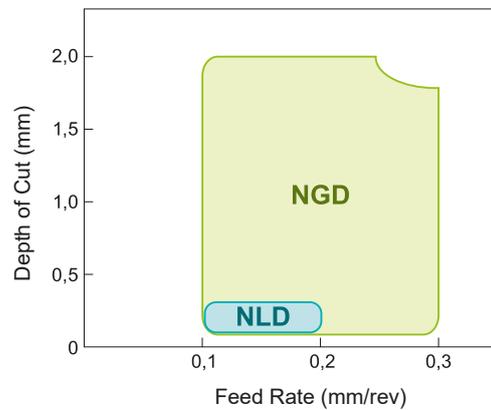

#### NLD Type Chipbreaker

Achieves excellent chip control for finishing.

Casted Aluminium Alloy (ADC12)

#### NGD Type Chipbreaker

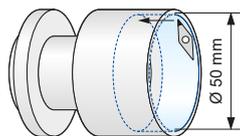

Achieves excellent chip control for semi finishing.

### ■ Application Examples

#### Internal Turning of Machine Component

Provides good chip control in small-depth cutting of wrought Al alloy.

Breakmaster **NLD** type

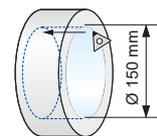

Without chip breaker

Work Material: A6061  
Insert: VCMT110302 **NLD** NF (DA1000)  
Cutting Conditions:  $v_c = 200$  m/min,  $f = 0,20$  mm/rev,  $a_p = 0,10$  mm, wet

#### Internal Turning of Transmission Component

Offers good chip control in casted material. Small chips - easy to remove.

Breakmaster **NGD** type

Without chip breaker

Work Material: ADC12  
Insert: TPMT110304 **NGD** NF (DA1000)  
Cutting Conditions:  $v_c = 400$  m/min,  $f = 0,23$  mm/rev,  $a_p = 1,20$  mm, wet

# SUMIDIA One-Use Inserts Break Master DM Type

**N** Non-ferrous Metal

## General Features

Economy One-Use Insert

- Similar to SumiBoron One-Use type inserts

With Built-in Chipbreaker for Effective Chip Removal

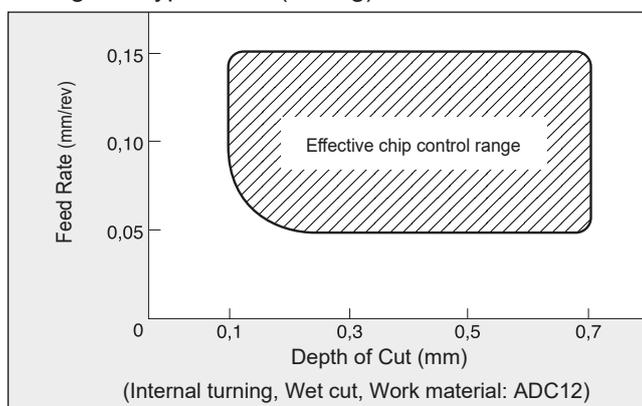

- Solving chip control problems and improving efficiency with DM-type chipbreaker.

Extensive Insert Range for External and Facing Operation

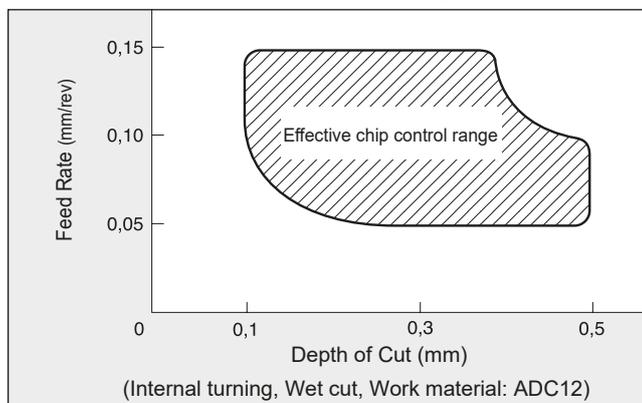

- 80° and 55° diamond shaped inserts are added to expand the application range of this series.

## Application Range

Triangular Type Insert (Boring)

CCMT/DCMT Type (External Turning & Facing)

## Chip Control

Break Master

No Chipbreaker

## Application

Machining Details	Cutting Conditions	Results
Work Material: AC2A-T6	$v_c = 300$ m/min $f = 0,06$ mm/rev $a_p = 0,35$ mm	Surface finish of the bore hole was less than $Ra = 1 \mu\text{m}$ .
Operation: Internal Boring	Wet cut	Chips formed was of a uniform curl of about 2 mm in length. There was almost no chips left inside the bore hole.

## Recommended Conditions

Boring (Triangular Insert)

Feed Rate	Depth of Cut	Type
-0.15 mm/rev.	-0,7 mm	Wet cut

External Copying (55°, 80° Diamond Shaped Inserts)

Feed Rate	Depth of Cut	Type
-0.15 mm/rev.	-0,5 mm	Wet cut

For facing process, D.O.C. should be less than 0,4 mm

 L4, L5 Edge Specification of SUMIBORON Inserts

# SUMIDIA Binderless Indexable Inserts

## SUMIDIA Binderless PCD - Insert Grade NPD10

### Negative Inserts

Application: Hard brittle material

	Shape	ISO Cat. No.	Dimensions (mm)					NPD10
			Inscribed Circle (IC)	Thick-ness	Hole Size	Nose Radius	Cutting Edge Length	
 55° Diamond Type		<b>DNMA 150408 RH</b> <b>150412 RH</b>	12,70	4,76	5,16	0,8	1,8	○
						1,2	1,8	○
 Square Type		<b>SNMA 120408 RH</b> <b>120412 RH</b>	12,70	4,76	5,16	0,8	1,7	○
						1,2	1,7	○
 35° Diamond Type		<b>VNMA 160408 RH</b> <b>160412 RH</b>	9,525	4,76	3,81	0,8	1,8	○
						1,2	1,5	○

Note: Clearance angle of cutting edge tip can show deviation due to the production process.

### Positive Inserts

Application: Hard brittle material

	Rake Angle	Shape	ISO Cat. No.	Dimensions (mm)					NPD10
				Inscribed Circle (IC)	Thick-ness	Hole Size	Nose Radius	Cutting Edge Length

Sumidia  
Inserts

# SUMIBORON / SUMIDIA Precision Tools

## BSME

M36-38

**Very small boring bar - brazed type**

- Solid carbide shank boring bar with brazed CBN tip and inner coolant supply.
- For tiny hole diameter boring in hardened steel.
- Min. boring dia. is  $\varnothing$  2,5 mm.

## SEXC

M36-39

**CBN boring tool for small diameter boring**

- Solid carbide shank boring bar with indexable CBN insert and inner coolant supply.
- For small hole diameter boring in hardened steel.
- Min. boring dia. is  $\varnothing$  4,0 mm.

## BNBB

M40

**Small hole boring tools**

- CBN cutting edge is brazed on to a solid carbide shank.
- Small hole boring for hardened steels.
- Min. boring dia. is  $\varnothing$  3,5 mm.

## BNZ

M41

**Small hole boring bars**

- Solid carbide boring bars with economical CBN insert.
- Small hole boring for hardened steels.
- Min. boring dia. is  $\varnothing$  7,0 mm.

## BNB

M41

**Small hole boring bars**

- Solid carbide boring bars with economical CBN and PCD insert.
- Min. boring dia. is  $\varnothing$  10,0 mm.

## GWB / PSC

M42-43

**CBN Grooving System for Hardened Steels**

- Tangential Inserts – Double clamp holder
- Groove Widths from 1,5 – 6,0mm
- New CBN grade for interrupted grooving
- ISO-PSC polygon modular grooving system

## BNGG

M44

**Threading holders**

- CBN cutting edge for hardened steel
- Adjustable threading after regrinding.

## DABB

M45

**Small hole boring tools**

- PCD cutting edge for finishing of small non-ferrous parts
- Min. boring dia. is  $\varnothing$  3,0 mm.
- DABB-C for boring  
DABB-N for profiling and corner grooving

**ANX** M46-51

**High speed cutter for Non-ferrous Metal**

- Achieves feeds of over  $v_f = 30.000 \text{ mm/min}$
- 6 different edge preparations
- Simple screw-fastening structure enables fine adjustments to be made easily
- Precise applications of coolant to the machining point
- Milling cutter range with diameter from  $\varnothing 32\text{-}160 \text{ mm}$

**RF** M52

**High speed face mill for Aluminium**

- Finishing and roughing aluminium alloys and non-ferrous materials
- High precision and highspeed machining  $v_c = 5000 \text{ m/min}$
- Aluminium alloy body  
Run-out less than  $10 \mu\text{m}$
- Easy assembling

**SRF** M53

**High speed face mill for Aluminium**

- Small diameter cutter for small machines
- High speed roughing and finishing with SumiDia DA2200
- High speed capability of  $\text{rpm} = 20.000$
- Economical PCD insert NF type

**FMU** M54-55

**"BN Finish Mill" for finishing grey cast iron**

- High speed machining  $v_c = 1500 \text{ m/min}$
- Excellent surface roughness  $R_z = 3,2$
- Run-out less than  $10 \mu\text{m}$
- Easy assembling

**BNES** M56

**"Helical Master" SUMIBORON Endmill**

- Spiral CBN brazed cutting edge for super finishing hardened steel (HRC 50 – 60)
- Dry machining
- Stable cutting
- High accuracy
- Excellent swarf evacuation

**BNBP** M57

**"Mould Finish Master" SUMIBORON Micro Ball Nose Endmills**

- High precision machining of hardened steels < HRC 70 with long tool life
- Super tough grade SUMIBORON BN350 prevents chipping of the cutting edge
- R accuracy :  $\pm 0,005 \text{ mm}$

**NPDRS / NPDB(S)** M58-59

**"Mould Finish Master" SUMIDIA Binderless Endmills**

- NPDRS - radius endmills
- NPDB(S) - ball nose endmills
- For finishing of carbide and brittle materials
- High precision machining and long tool life

**DAL / DDL / DML** M60-61

**High precision SUMIDIA Drills**

- PCD cutting edge is brazed on to a solid carbide shank.
- From general to high precision drilling of Aluminium alloys
- DML type is suitable for chamfering and stepped drilling

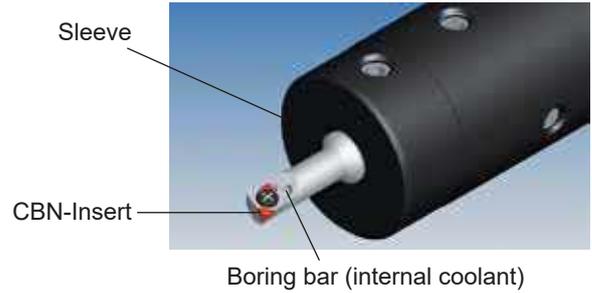

# BSME/SEXC Series

## ■ Features

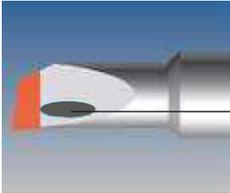

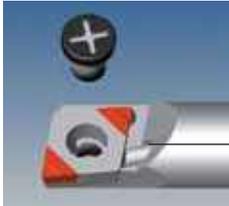

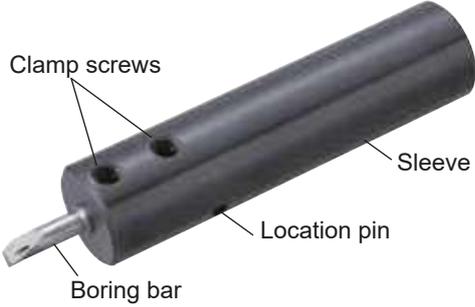

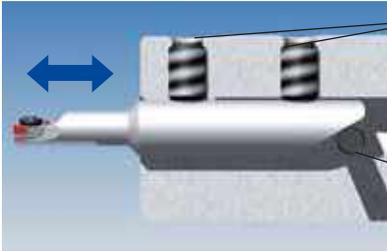

- New ultra small boring bar with CBN cutting edge
- Internal coolant
- Easy setting and handling
- High accuracy
- Carbide body for high rigidity
- One sleeve for different diameters

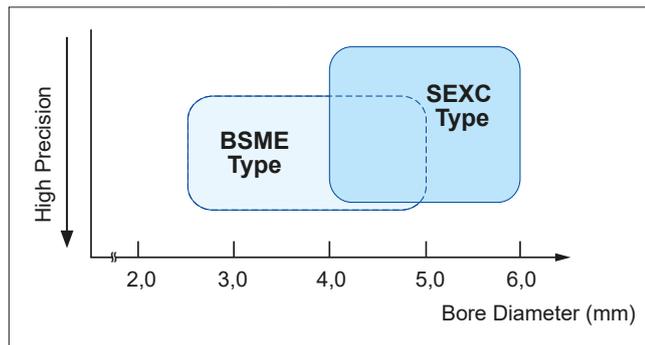

## ■ Basic System

## ■ 2 Types of CBN Small Hole Boring Bar System

BSME - CBN Brazed Cutting Edge Type	SEXC - Indexable CBN Insert Type
Min. bore diameter: $\varnothing 2,5 - 5,0$ mm	Min. bore diameter: $\varnothing 4,0 - 6,0$ mm
<p>Unique cutting edge shape with high quality and sharpness</p>  <p>Internal coolant hole (standard)</p>	<p>2 corner inserts</p>  <p>Internal coolant hole (standard)</p>
 <p>Clamp screws Sleeve Location pin Boring bar</p>	 <p>Clamp screws Sleeve Location pin Boring bar</p>
<p>Excellent repeatability of boring bar (deviation within 0,020 mm)</p>  <p>Clamp screws Location pin for controlled cutting edge position</p>	

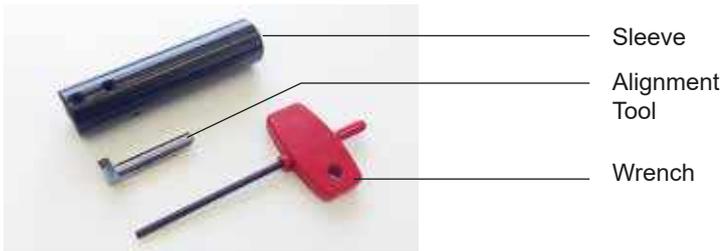

## ■ Application Range

## ■ Recommended Cutting Conditions

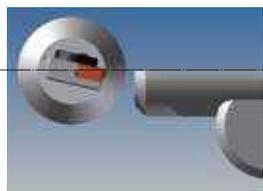

Spindle Speed (n)	$>2000 \text{ min}^{-1}$	Low speed may cause chattering and chipping on the cutting edge.
Depth of Cut ( $a_p$ )	0,01 – 0,15 mm	Excessive depth of cut may cause larger tool deflection resulting in deterioration of bore accuracy.
Feed Rate (f)	0,01 – 0,1 mm/rev	-

### Accessories

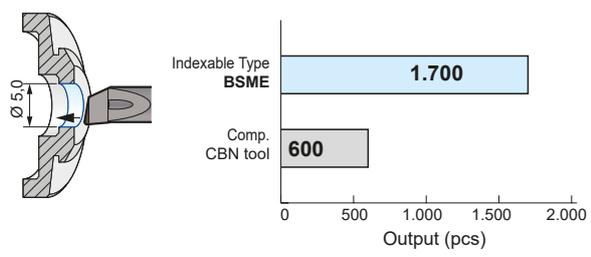

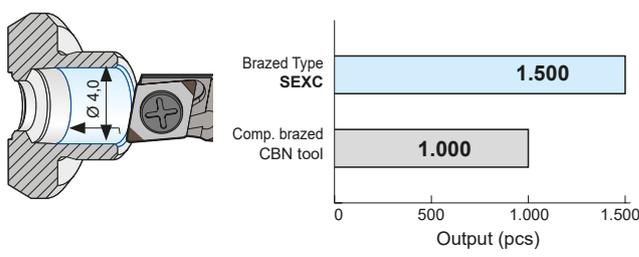

Sleeve  
Alignment Tool  
Wrench

### Mounting Instruction

<p>1. Insert alignment tool into the sleeve until you connect with the pin inside. Gently lock the screws to hold.</p>	
<p>2. Locate the sleeve into your tool-holding system. Gently lock the screws to hold.</p>	
<p>3. Clock the flat of the alignment tool into a straight position.</p> 	<p>After adjustment, equipped boring bar has automatically cutting peak height of zero on the center of tool.</p> 
<p>4. Use pre setting machine to set the diameter of the boring bar.</p>	

### Application Example

BSME Hardened Alloy Steel Valve Component	SEXC Bearing Steel Small Automotive Component												
<p>The BSME type provides stable machining. Tool life is over 2 times longer than competitor's CBN tool.</p>  <table border="1"> <caption>Tool Life Comparison for BSME</caption> <tr> <th>Tool Type</th> <th>Output (pcs)</th> </tr> <tr> <td>Indexable Type BSME</td> <td>1.700</td> </tr> <tr> <td>Comp. HBB 816	●			8	

## ■ Spare Parts

Screw	Wrench
BT 0404	TH 020

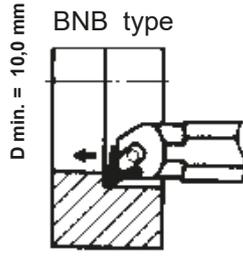

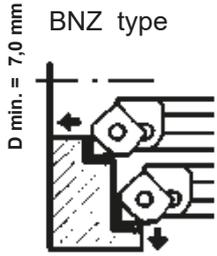

## ■ Recommended Cutting Conditions

Work Material	SUMIBORON BN250		Notes
Hardened steels (H <sub>R</sub> C45-68)	Cutting speed (v <sub>c</sub> )	30-150 m/min	Low speed may cause chattering in cutting process and chipping occurrence on the cutting edge.
	Feed rate (f)	0,03-0,1 mm/rev	-
	Depth of cut (a <sub>p</sub> )	0,03-0,2 mm	Excessive depth of cut may cause larger deformation of tool, resulting in deterioration of bore accuracy.

## ■ Precaution On Use

- Adjust overhang to achieve absolute minimum.
- For use of a small diameter brazed boring tool, select high speed and small feed rate, as much as possible.

Cutting speed	80–120 m/min
Feed rate	0,03–0,1 mm/rev
Depth of cut	0,03–0,2 mm

## Holders Performance Area

Work material: Alloy steel (H<sub>R</sub>C 60)  
 Cutting conditions: v<sub>c</sub> = 100 m/min  
 f = 0,1 mm/rev  
 a<sub>p</sub> = 0,2 mm

# SUMIBORON Grooving Tool Holder GWB / PSC Type

## Features

### Tangential insert

80 degree tangentially mounted insert improves rigidity

### Double clamping system

The double clamping system increases stability so even axial feeds are possible.

### Coated CBN grade BNC30G

Tough new coated CBN grade for interrupted hard grooving

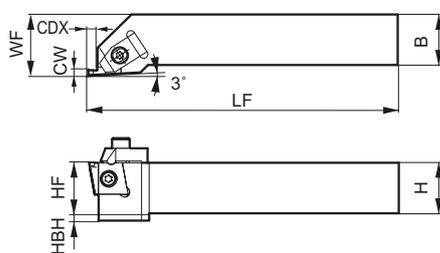

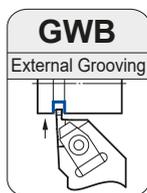

### Wide insert range 1,5–6,0 mm

Wide range of width's and grades for continuous and interrupted cut grooving operations

## Grades

Grade	Application	Features
BN250	Continuous grooving	Uncoated CBN grade for continuous cut grooving applications
BNC30G	Interrupted grooving	Tough new CBN coated grade developed for interrupted cut grooving applications

## Grooving Tool Holder GWB Type

Special widths available on request

### ■ Recommended Cutting Conditions

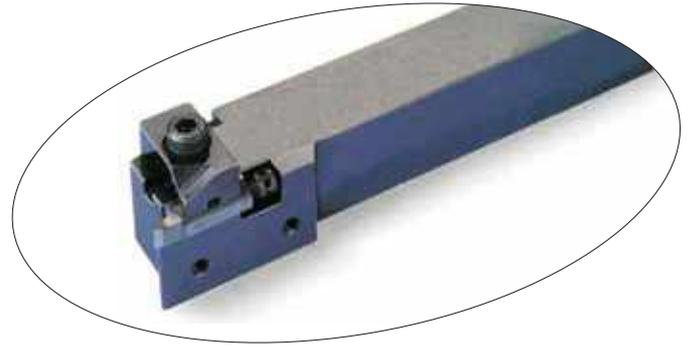

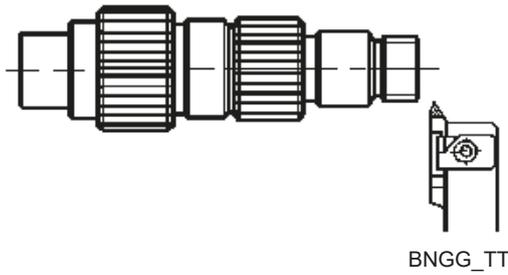

Material	Hardened steel
Cutting speed (m/min)	60 — 80 — 120 — 150
Feed rate (mm/rev)	0,03 — 0,04 — 0,08 — 0,1
Grade	BN250, BNC30G

Coolant:  
Dry / wet (for continuous cut)  
Dry only (for interrupted cut)

Remarks:  
To avoid thermal cracking of the cutting edge when interrupted cutting please ensure workpiece remains dry.

## ■ Spare Parts

Screw	Wrench
 BT 0404	 TH 020

### ■ Features

**Drastically Reduced Runout Adjustment Time**  
Simple screw-fastening structure enables fine adjustments to be made easily.

### Blade Through Coolant

Secures a supply of coolant to the cutting edge and breaks chips thoroughly.

### Lightweight Aluminum Alloy Body

Utilizing aluminum alloy to achieve a total weight of less than 1,3 kg for a Ø 125 mm cutter with 22 teeth.

### ■ Product Range

Type	Cat. No.	Body Material	Diameter Range (mm) / No of Teeth							
			Ø32	Ø40	Ø50	Ø63	Ø80	Ø100	Ø125	Ø160

Applications	Finishing / Light Cutting	General Purpose	Roughing		Corner Radius	Wiper
Edge Length*	6,0 mm	6,0 mm	9,0 mm	6,0 mm		

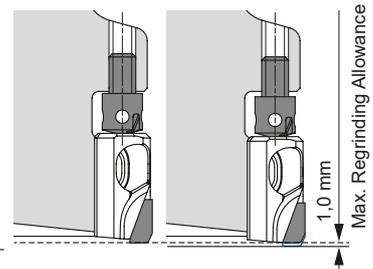

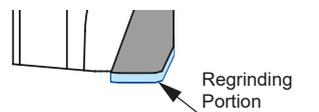

\*Edge length  
GX type = 9,0 mm

### ■ Edge Selection Guide

### ● Reduces Running Costs by Drastically Increasing Blade, Insert Regrinding Allowance (to 1,0 mm)

Assuming 0,2 mm of regrinding each time, an edge can be used up to 6 times. (Peripheral edge cannot be reground.)

If you wish to use reground blades you shall use sets of blades with matching size of the same level in order to keep the balance.

## ■ Performances

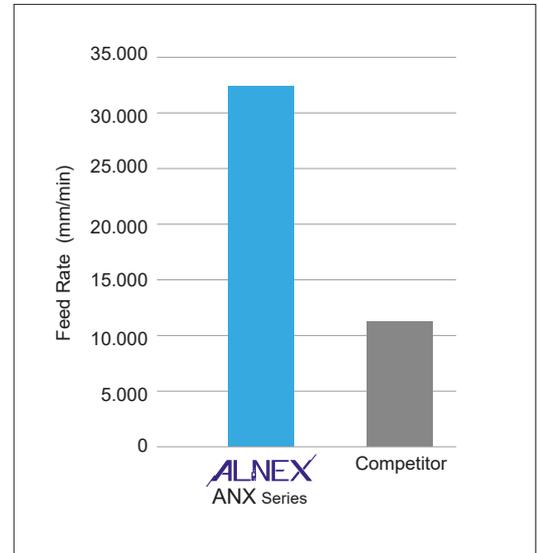

### ● High-Speed / High-Efficiency Cutting

Realizes ultra-high efficiency machining with  $v_f = 30.000$  mm/min

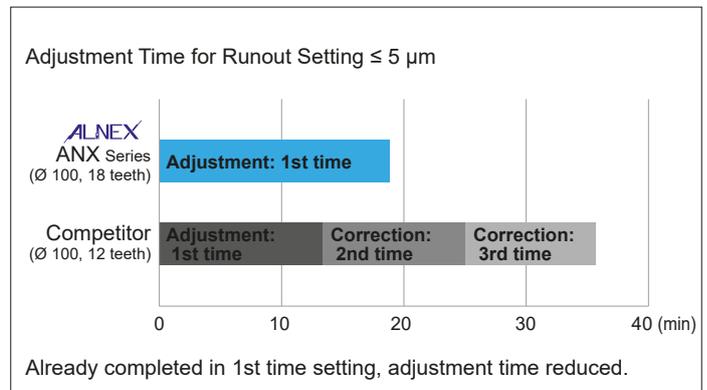

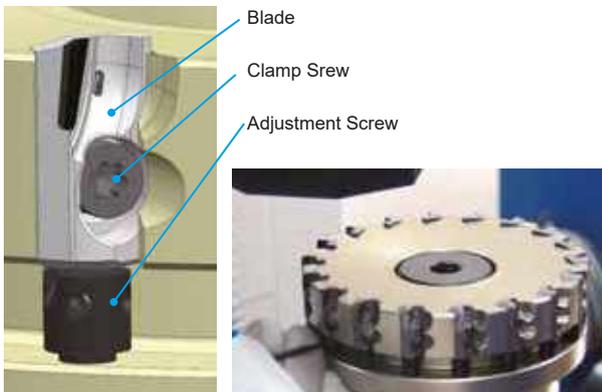

Comparison: Cutter Diameter  $\varnothing$  100 mm

	Spindle Speed min <sup>-1</sup>	Number of Teeth	Feed Rate $v_f$ (mm/min)
ANX Series	18.000	18	32.400
Competitor	9.500	12	11.400

### ● Drastically Reduces Runout Adjustment Time

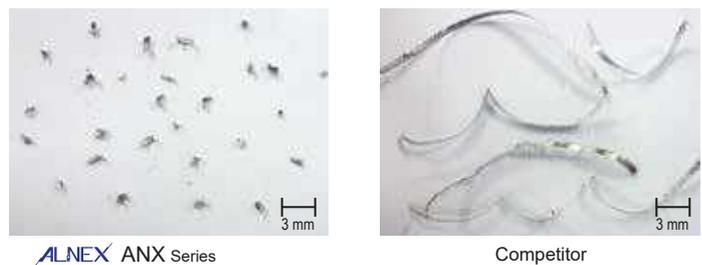

- Simple screw-fastening structure
- Enables fine adjustments to be made easily
- High-rigidity body

### ● Chip Control

### Blade-Through Coolant Chip Breaking

## Recommended Cutting Conditions

Si content ≤ 12,6 %

Min. - Optimum - Max.

ISO	Work Material	Hardness	Cutting Speed v <sub>c</sub> (m/min)	Feed Rate f <sub>z</sub> (mm/t)	Grade
	Aluminum Alloy	—	2.000–2.500–3.000	0,05–0,13–0,20	DA1000

Si content ≥ 12,6 %

Min. - Optimum - Max.

ISO	Work Material	Hardness	Cutting Speed v <sub>c</sub> (m/min)	Feed Rate f <sub>z</sub> (mm/t)	Grade
	Aluminum Alloy	—	400–600–800	0,05–0,13–0,20	DA1000

The above recommended cutting conditions are meant as a guide. Actual conditions will depend on the individual machine rigidity, work clamp rigidity, depth of cut and other factors.

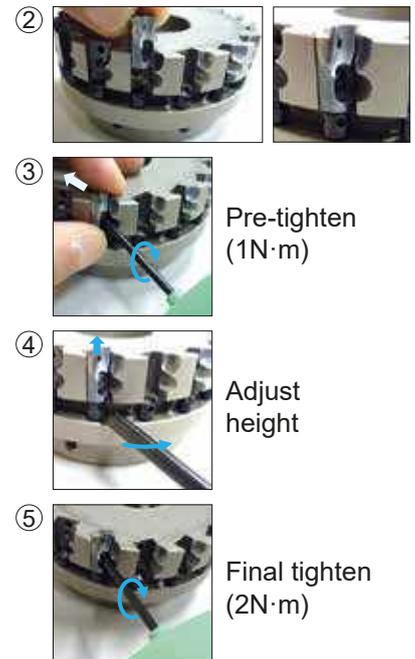

○ = Japan stock

Recommended Tightening Torque (N·m)

## ■ ALNEX Series Usage Manual

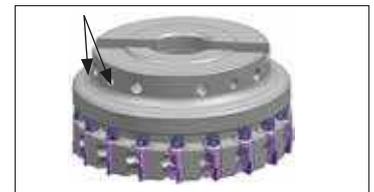

### ● Adjustment of the Blades, Runout Alignment

- ① Before inserting the blade, make sure that the seat and screws are free of debris by cleaning those areas.
- ② Insert the blade into its seat.
- ③ While holding the blade against the seat, install the clamping bolt using the provided wrench, pre-tightening the bolt (recommended pre-torque is 1 N·m).
- ④ Using the provided wrench for the height adjustment screw, set the height to your predetermined value.
- ⑤ Fully tighten the clamp bolt (recommended torque is 2 N·m).
- ⑥ Use 1 blade as a datum point and adjust all blade heights to match.
- ⑦ After tightening, verify that there is no gap between the seat and blade.

### ● Balance Adjustments

The cutter comes pre-balanced to a G 6,3 specification. Under normal circumstances, it is not necessary to adjust the balance of the cutter.

### ● Clamp Bolts for Arbor

Work Material	Dim.			Max. Torque	Applicable Cutters	
	M	L	D			
BXH0825-D13	8	25	13	15	ANXS16040RS_ _

BXH1635-D40	16	35	40	100	ANXS16100R(S)_ _	
BXH2036-D50	20	36	50	200	ANXS16125R(S)_ _ , ANXA16160R(S)_ _	

### ● Other Precautions

- Please use only Sumitomo genuine parts.
- Please regularly replace clamp bolts.
- If you wish to reduce the # of effective blades in use, to maintain balance and protect the body, please use dummy blades (set height well below effective blades).
- Please do not operate after releasing the interlock or opening the cover.
- Please avoid use and consult with Sumitomo if you mistakenly crash the body.
- As the blades are very sharp, it is very easy to get hurt when touching the blades with your hands directly, so please wear gloves when taking the blade out of the case to set into the cutter or when setting the cutter into machine tool.

09T3 ADTR-U-NF	○	Wiper	2
09T3 ADTR-R-NF	○	Nose Radius	3

- Standard inserts and Wiper inserts can be used on the same cutter body.
- Standard inserts with nose radius should be used where vibration is present. As such, Wiper-inserts will not be applicable.
- Inserts can be regrind 3 times (up to minimum IC diameter 9,225 mm).
- When using reground inserts, it is advisable to reconfirm insert height and cutting diameter with a tool pre-setter.
- Do not mix new and reground inserts, or even inserts with different regrind amount on the same cutter.

Aluminium Alloy	Si < 13 %	Finishing	DA1000 (PCD)	2.000-5.000	- 4.000	0,05-0,2	- 3,0	- 5,0
		Roughing	H1 (Carbide)	1.000-2.500	-			
	Si ≥ 13 %	Finishing	DA1000 (PCD)	400-800	- 800			
		Roughing	H1 (Carbide)	200-400	-			

# SUMIBORON "BN Finish Mill" FMU Type

## High Speed Finishing of Grey Cast Iron

### ■ Features

- High speed machining  $v_c = 1.500 \text{ m/min}$
- Excellent surface roughness  $R_z = 3,2$  ( $R_a = 1,0$ )
- Safety structure for the centrifugal force under high speed cutting conditions
- Run-out is less than  $10 \mu\text{m}$
- Easy assembling method using the setting gauge
- Running cost is reduced because of economical insert

### ■ Application

GG25 – GG30 (HB200 – 250) grey cast iron with pearlite matrix, and ferrite matrix (HB130 – 160)  
Application examples: engine block, cylinder block, etc

### ■ Specifications

FMU Type:  $\varnothing 80\text{--}\varnothing 315 \text{ mm}$   
Insert: SNEW1203ADTR/L  
Low cutting force type: SNEW1203ADTR/L-S

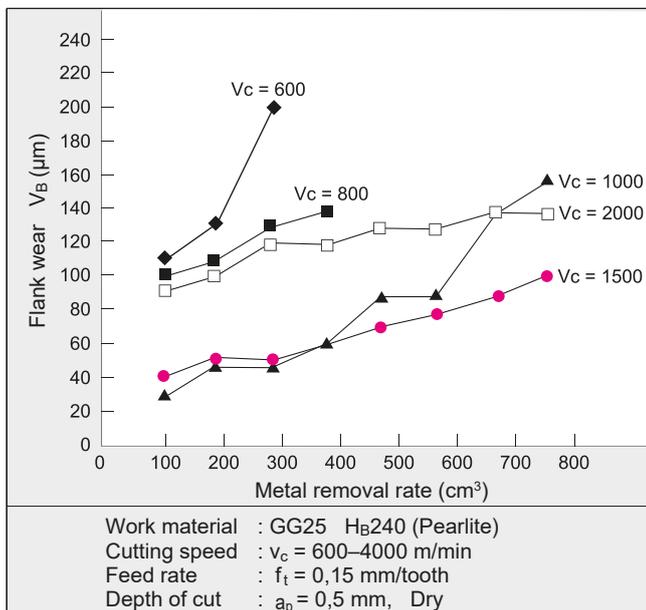

### ■ Recommended Cutting Conditions

Speed:  $v_c = 800\text{--}2000 \text{ m/min}$   
Feed:  $f_t = 0,1\text{--}0,3 \text{ mm/tooth}$   
Depth:  $a_p = 0,5 \text{ mm or less}$   
Dry cutting

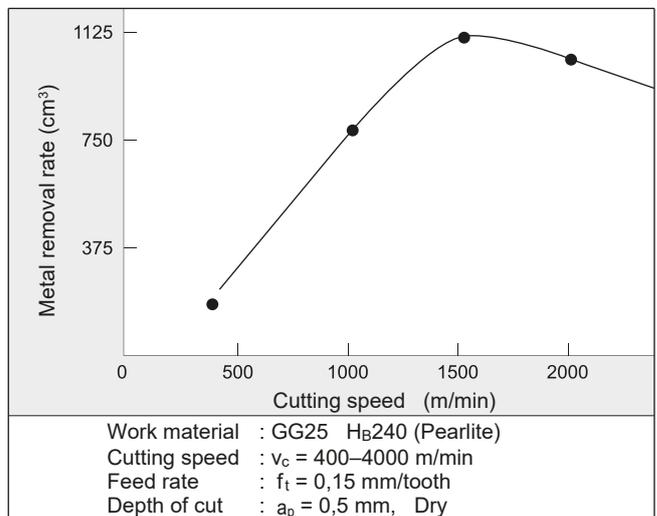

### ■ Performance

#### ● Tool Life Diagram

#### ● Estimated Tool Life

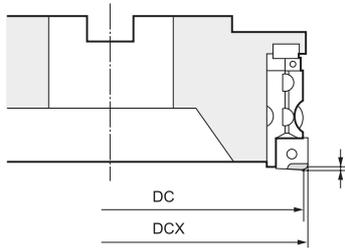

- Milling of ductile cast iron and alloy steel casting do not produce the best results.
- Dry cutting is recommended. Wet cutting will result in chipping of cutting edges in the early stages due to thermal cracking.

	BNES 1140	○	14,0	16	16,0	21,5	80

Helix angle : 15°  
right-hand cut, right-hand helix

### Recommended Cutting Conditions

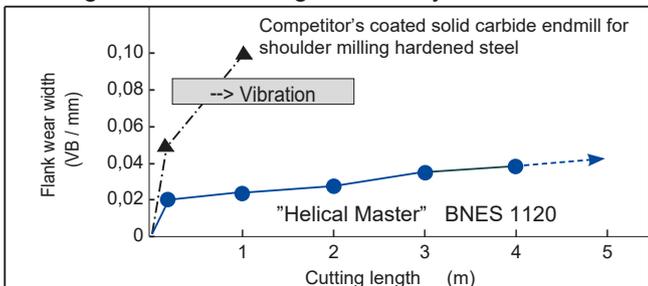

Cutting speed:  $v_c$  (m/min), Spindle revolutions:  $n$  (rpm), Feed per tooth:  $f_t$  (mm/tooth), Feed speed:  $v_f$  (mm/min)

Tooling example	DC	Hardened steel (HRC 50–57)			Hardened steel (HRC 58–65)		
		$v_c = 100-170$ m/min			$v_c = 80-150$ m/min		
	$\varnothing 6-8$	$a_e \leq 0,1$ mm	$n = 4000-9000$	$V_f$ (mm/min) = 240–540	$a_e \leq 0,08$ mm	$n = 3200-8000$	$V_f$ (mm/min) = 150–370
	$\varnothing 10-12$	$a_e \leq 0,15$ mm	$n = 2700-5400$	$V_f$ (mm/min) = 180–360	$a_e \leq 0,12$ mm	$n = 2100-4800$	$V_f$ (mm/min) = 120–270
	$\varnothing 14-16$	$a_e \leq 0,2$ mm	$n = 2000-3800$	$V_f$ (mm/min) = 140–260	$a_e \leq 0,15$ mm	$n = 1600-3400$	$V_f$ (mm/min) = 110–230

Recommendation: Dry cutting (Air coolant)  
Down-cut milling  
Minimise the overhang  
Use a rigid machine

### Performance

#### ● Long Tool Life and High Efficiency

Work material: X155CrVMo12-1  
Hardness: HRC 60

Cutting data:  
 $v_c = 100$  m/min (Helical Master)  
 $v_c = 40$  m/min (Competitor's coated solid carbide endmill)  
 $v_f = 186$  mm/min

Down-cut milling  
Dry cutting

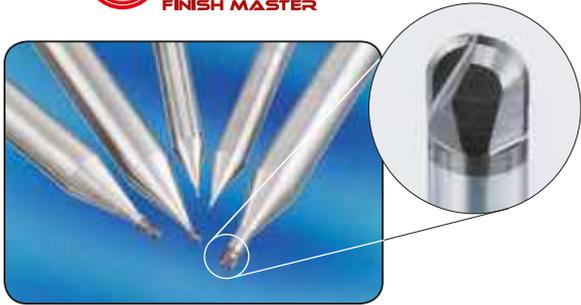

#### ● Excellent Surface Roughness

"Helical Master" BNES 1080  $\varnothing 8,0$

Conventional straight flute CBN endmill,  $\varnothing 8,0$

Work material: 15Cr3  
Hardness: HRC 55–58  
Cutting data:  $v_c = 130$  m/min,  $v_f = 310$  mm/min

Down-cut milling  
Dry cutting

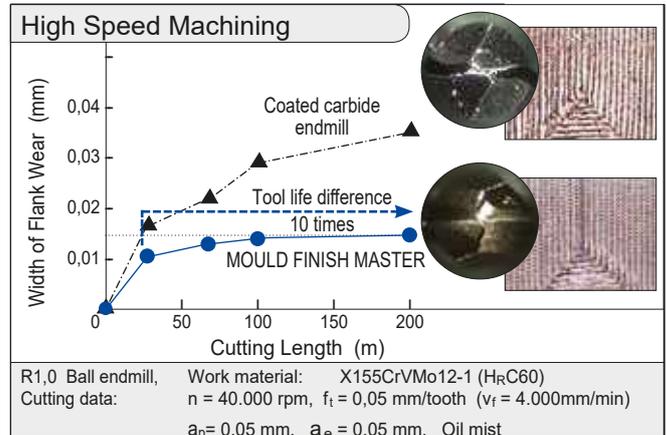

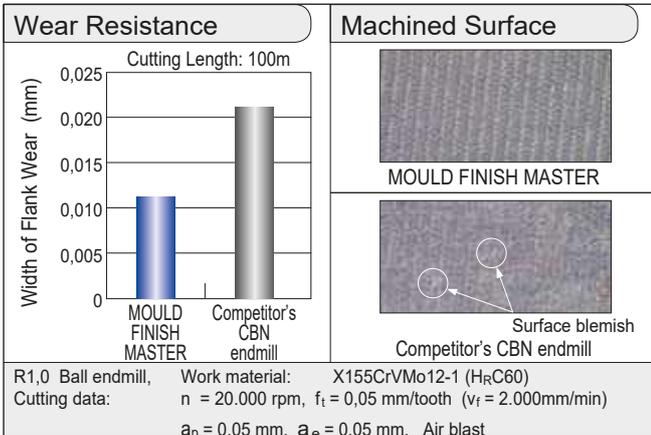

■ Characteristics / Application

- High precision machining of hardened steels < HRC 70 with long tool life
- Super tough grade SUMIBORON BN350 prevents chipping of the cutting edge
- R accuracy : ±0,005 mm

■ Endmills

# SUMIDIA Drills

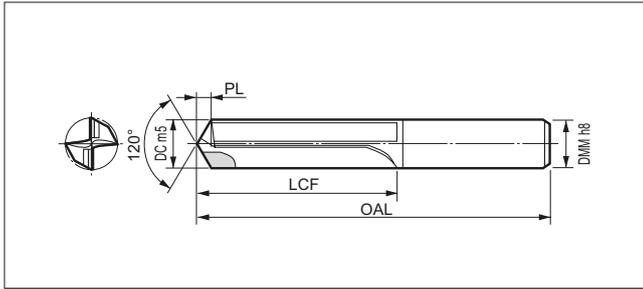

## DAL/DDL/DML Type

From general to High Precision Drilling of Aluminum Alloys!

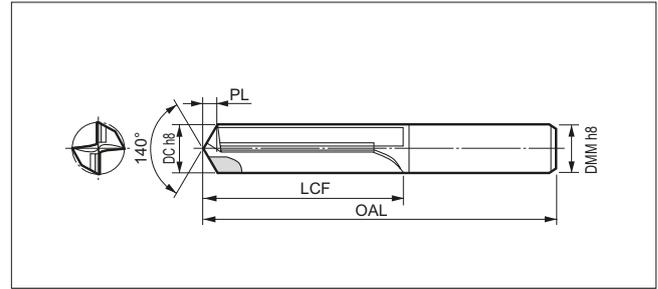

- High precision DAL type is able to produce holes of IT Class of 7 – 8.
- General DDL type is able to produce holes of IT class of 11 – 12, mainly for drilling of pre-tap holes.
- DML type is DDL type with a chamfer edge, incorporating 2 processes in one operation.

### ■ DAL Type

Cat. No.	DA2200	DC (DMM)	LCF	OAL	PL
DAL 0500H – 0600H		$\emptyset 5 \leq DC \leq \emptyset 6$	31,6	84,6	1,6
0601H – 0700H		$\emptyset 6 < DC \leq \emptyset 7$	36,9	91,9	1,9

Cat. No.	DA2200	DC (DMM)	LCF	OAL	PL
DDL 050V – 060V		$\emptyset 5 \leq DC \leq \emptyset 6$	31,5	81,0	1,0
061V – 070V		$\emptyset 6 < DC \leq \emptyset 7$	36,2	91,2	1,2
071V – 080V		$\emptyset 7 < DC \leq \emptyset 8$	36,4	91,4	1,4
081V – 090V		$\emptyset 8 < DC \leq \emptyset 9$	41,6	101,6	1,6
091V – 100V		$\emptyset 9 < DC \leq \emptyset 10$	41,7	101,7	1,7
101V – 110V		$\emptyset 10 < DC \leq \emptyset 11$	51,9	111,9	1,9
111V – 120V		$\emptyset 11 < DC \leq \emptyset 12$	52,1	112,1	2,1

### ■ Recommended Conditions

DC (mm)	Cutting Speed (m/min)	Feed Rate (mm/rev)	Drilling Length L/D	Oil
<8	80–250	0,05–0,2	Below 3 x D	Water soluble
$\geq 8 \leq 12$		0,1–0,3		

### ■ Important Notes

- Select a high rigidity machine and high precision tool holder.
- Enough coolant to drilled hole.

### ■ Application Examples (DAL Type)

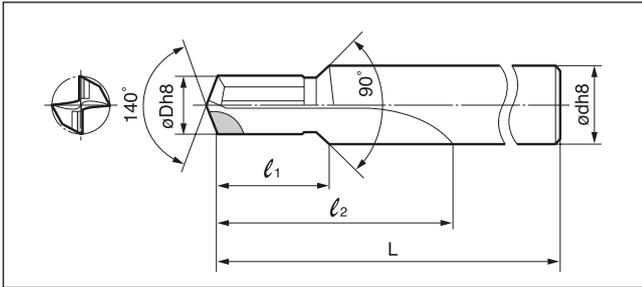

Work Shape	Work	Conditions	Results
	A390 High silicon Aluminum	$V_c=100\text{m/min}$ $f=0,1\text{mm/rev}$	<ul style="list-style-type: none"> <li>• Holes by carbide drill was out of specifications after 2.000 holes/reg.</li> <li>• SumiDia drill could drill up to 30.000 holes/reg.</li> <li>• 15 times tool life that of carbide drills.</li> </ul>
	A390 High silicon Aluminum (pre-cast hole of $\emptyset 10$ )	$V_c=120\text{m/min}$ $f=0,12\text{mm/rev}$	<ul style="list-style-type: none"> <li>• Average 40,000 holes/reg</li> <li>• Surface roughness <math>R_y = 1\mu\text{m}</math></li> </ul>
	ADC10 Aluminum Die Cast	$V_c=90\text{m/min}$ $f=0,08\text{mm/rev}$	<ul style="list-style-type: none"> <li>• More than 50.000 holes and still running</li> </ul>

### ■ Application Examples (DDL Type)

Work Shape	Work	Conditions	Results
	ADC12 Aluminum Die Cast M8 Pre-tap holes	$V_c=214\text{m/min}$ $f=0,14\text{mm/rev}$	<ul style="list-style-type: none"> <li>• Regrind after 100.000 holes</li> </ul>
	ADC12 Aluminum Die Cast	$V_c=200\text{m/min}$ $f=0,17\text{mm/rev}$	<ul style="list-style-type: none"> <li>• Regrind after 74.000 holes (2.000m) (Preset tool change)</li> </ul>
	AC2A Aluminum Casting	$V_c=234\text{m/min}$ $f=0,28\text{mm/rev}$	<ul style="list-style-type: none"> <li>• Regrind after 80.000 holes (Preset tool change)</li> </ul>

## ■ DML Type

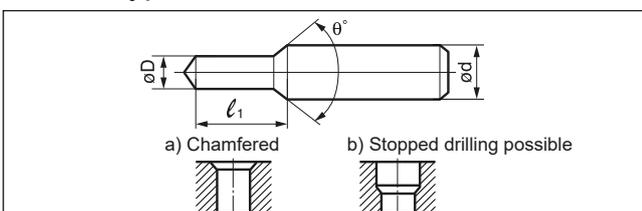

Applicable Tap Size	Cat. No.	Stock	$\phi D$	$\phi d$	L	$l_1$	$l_2$
		DA2200					
M6	DML 050V		5	8	90	18	36
M8	DML 068V		6,8	10	104	24	48
M10	DML 085V		8,5	12	122	30	60
M12	DML 103V		10,3	14	136	36	72

## ■ Application Examples (DML Type)

Work Shape	Work	Conditions	Results
	AC4C-T6 Aluminum Casting M6 Pre-tap holes	$V_c=100\text{m/min}$ $f=0,1\text{mm/rev}$ $m/c=6$ spindles	<ul style="list-style-type: none"> <li>• Regrind after 150.000 holes</li> <li>• Tool life for carbide drill is 500 holes.</li> <li>• 30 times tool life that of carbide drills</li> </ul>
	AC2C-T2 Aluminum Casting M8 Pre-tap holes	$V_c=210\text{m/min}$ $f=0,15\text{mm/rev}$	<ul style="list-style-type: none"> <li>• 100.000 holes/reg (2.000m) and still running.</li> <li>• Drilling and chamfering in the same process</li> </ul>
	AC4C-T6 Aluminum Casting M10 Pre-tap holes	$V_c=250\text{m/min}$ $f=0,2\text{mm/rev}$	<ul style="list-style-type: none"> <li>• 80.000 holes/reg (1,840m) and still running.</li> <li>• Drilling and chamfering in the same process</li> </ul>

## ■ DML Type Possible Profiles

- (1) Tolerance for dimension L is more than 0,2mm.
- (2)  $\theta^\circ$  is less than  $180^\circ$ .
