## Dimension symbols are compliant with ISO13399

The following table shows ISO13399-compliant dimension symbols. Contents corresponding to the sample symbols/notations are shown below. Tool shape diagrams and stock charts use the symbols and notation examples from the table below.

### (1) Inserts (For Turning / For Milling)

Symbol	Description
<b>AN</b>	Clearance angle major
<b>APMX</b>	Depth of cut maximum
<b>BS</b>	Wiper edge length
<b>CDX</b>	Cutting depth maximum
<b>CHW</b>	Corner chamfer width
<b>CW</b>	Cutting width
<b>D1</b>	Fixing hole diameter
<b>DMIN</b>	Minimum bore diameter
<b>IC</b>	Inscribed circle diameter
<b>INSL</b>	Insert length
<b>L</b>	Cutting edge length
<b>PDX</b>	Profile distance ex
<b>PDY</b>	Profile distance ey
<b>PNA</b>	Profile included angle
<b>RE</b>	Corner radius
<b>RER</b>	Right side corner radius
<b>REL</b>	Left side corner radius
<b>S</b>	Insert thickness
<b>W1</b>	Insert width
<b>WF</b>	Functional width

### (2) Tool Holders For Turning

Symbol	Description
<b>APMX</b>	Depth of cut maximum
<b>B</b>	Shank width
<b>BD</b>	Body diameter
<b>CDX</b>	Cutting depth maximum
<b>CRKS</b>	Connection retention knob thread size
<b>DC</b>	Cutting diameter
<b>DCB</b>	Connection bore diameter
<b>DCON</b>	Connection diameter
<b>DCSFMS</b>	Contact surface diameter machine side
<b>DMIN</b>	Minimum bore diameter
<b>DMM</b>	Shank diameter
<b>DN</b>	Neck diameter
<b>GAMF</b>	Rake angle radial
<b>GAMP</b>	Rake angle axial
<b>H</b>	Shank height
<b>HBH</b>	Head bottom offset height
<b>HBKL</b>	Head back offset length
<b>HBKW</b>	Head back offset width
<b>HBL</b>	Head bottom offset length
<b>HF</b>	Functional height
<b>KDP</b>	Groove depth
<b>KWW</b>	Keyway width
<b>LF</b>	Functional length
<b>LH</b>	Head length
<b>LHD</b>	Head length
<b>LS</b>	Shank length
<b>LSCX</b>	Clamping length maximum
<b>LU</b>	Usable length
<b>LUX</b>	Usable length maximum
<b>WF</b>	Functional width

(Turning Insert Example)

(Grooving Insert Example)

(External Holder Example)

Figure shows right-handed tool.

(Grooving Tool Holder Example)

Notes: The symbols in the above table are compliant with ISO13399 and do not include symbols unique to our company. As symbols under review are not included, these may change over time.

### (3) Cutters / Indexable Endmills

Symbol	Description
<b>APMX</b>	Depth Of Cut Maximum
<b>BD</b>	Body Diameter
<b>BDX</b>	Body Diameter Maximum
<b>CBDP</b>	Connection Bore Depth
<b>CRKS</b>	Connection Retention Knob Thread Size
<b>CW</b>	Cutting Width
<b>DBC</b>	Connection Bore Diameter
<b>DC</b>	Cutting Diameter
<b>DCB</b>	Clamping Diameter, Nominal, on Workpiece Side
<b>DCON</b>	Connection Diameter
<b>DCSFMS</b>	Contact Surface Diameter Machine Side
<b>DCX</b>	Cutting Diameter Maximum
<b>DMM</b>	Shank Diameter
<b>DN</b>	Neck Diameter
<b>H</b>	Shank Height
<b>KDP</b>	Groove Depth
<b>KWW</b>	Keyway Width
<b>LBX</b>	Body Length Maximum
<b>LF</b>	Functional Length
<b>LH</b>	Head Length
<b>LS</b>	Shank Length
<b>LU</b>	Usable Length
<b>OAL</b>	Overall Length
<b>RMPX</b>	Maximum Ramping Angle
<b>THUB</b>	Hub Thickness

(Shell Type Example)

(Shank Type Example)

(Modular Type Example)

### (4) Endmills

Symbol	Description
<b>APMX</b>	Depth Of Cut Maximum
<b>CHW</b>	Corner Chamfer Width
<b>DC</b>	Cutting Diameter
<b>DMM</b>	Shank Diameter
<b>DN</b>	Neck Diameter
<b>LF</b>	Functional Length
<b>LFS</b>	Functional Length Secondary
<b>LU</b>	Usable Length
<b>RE</b>	Corner Radius

### (5) Drills / Reamers

Symbol	Description
<b>BD</b>	Body Diameter
<b>BDX</b>	Body Diameter Maximum
<b>CW</b>	Cutting Width
<b>DC</b>	Cutting Diameter
<b>DCB</b>	Clamping Diameter, Nominal, on Workpiece Side
<b>DCON</b>	Connection Diameter
<b>DCSFMS</b>	Contact Surface Diameter Machine Side
<b>DF</b>	Flange Diameter
<b>DMM</b>	Shank Diameter
<b>LBX</b>	Body Length Maximum
<b>LCF</b>	Length Chip Flute
<b>LF</b>	Functional Length
<b>LFA</b>	A Dimension On Lf
<b>LFS</b>	Functional Length Secondary
<b>LH</b>	Head Length
<b>LPR</b>	Protruding Length
<b>LS</b>	Shank Length
<b>LU</b>	Usable Length
<b>LUX</b>	Usable Length Maximum
<b>OAL</b>	Overall Length
<b>PL</b>	Point Length
<b>WBTHK</b>	Web Thickness

(Endmill Example)

(Drill Example)

## Notice

Thank you for using the Sumitomo Electric Hardmetal General Catalogue  
(Sumitomo/SUMIBORON/SUMIDIA Cutting Tools Catalogue).

This catalogue presents the major items in the Sumitomo Cutting Tools product line.

The catalogue is organised as follows:

- (1) Cutting Tool Grades
- (2) Sumitomo Products
- (3) SUMIBORON, SUMIDIA Products

Ask for our brochures and pamphlets.

This catalogue is current as of January 2022.

As a result of our ongoing research, product may reflect enhancements in quality, performance and specifications not listed in this catalogue.

To order Sumitomo/SUMIBORON/SUMIDIA products, contact your nearest Sumitomo Electric Hardmetal dealer or distributor.

For inquiries or other requests, feel free to contact your nearest sales office.

## Stock Marking Chart

● : Euro stock item

○ : Japan stock item

□ : Delivery on request

▲ : To be replaced by new item

□ : Made to order item

— : We cannot produce

**Note:**

Stocking policy may change without prior notice, please consult our sales representative for actual stock situation.

**Grades**

Uncoated Cermet **T1000A / T1500A / T1500Z / T2500Z** Coated Cermet **New**

- T1000A** High-hardness cermet with outstanding wear resistance and toughness. Realises high dimensional accuracy for continuous steel machining or finishing of Sintered Alloy or cast iron.
- T1500A** General-purpose cermet made from hard grains with different grain sizes, delivering functionality that provides an excellent balance of wear resistance and toughness. Also achieves good surface finish quality.
- T1500Z** Employs Brilliant Coat PVD coating with excellent lubricity to provide better wear resistance and consistent surface finishes in low-speed cutting applications such as machining of small products or low carbon steel.
- T2500Z** A new cermet substrate with excellent thermal conductivity is used to achieve outstanding thermal crack resistance. Also uses Brilliant Coat, which has excellent lubricity.

### Grades

**AC8015P / AC8020P / AC8025P / AC8035P / AC1030U**

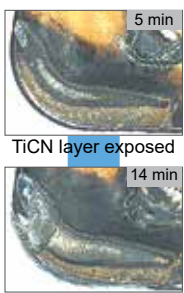

Covers a wide range of machining applications from high-speed cutting to interrupted cutting and small lathe machining.

- AC8015P** Development of crater damage is suppressed by controlling the orientation of the alumina crystal grains. Achieves long, stable tool life during high-speed and high feed cutting.
- AC8020P** Alumina coating with even higher strength balances outstanding stability and wear resistance in mill-scale work on forged material. Gold-colored coating makes used corners easily identifiable.
- AC8025P** The 1st recommendation grade for turning steel. Surface smoothing technology significantly suppresses adhesion of work material components. Achieves long, stable tool life with various cutting speeds and work materials.
- AC8035P** Tensile stress removal of the coating layer greatly improves fracture resistance. Achieves long, stable tool life during heavy interrupted cutting.
- AC1030U** Employs a new PVD coating and a dedicated tough carbide substrate. High-quality cutting edge grade suppresses adhesion and micro-chipping, realizing excellent machined surface quality.

### Performance

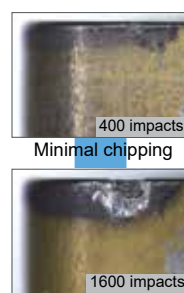

#### AC8015P

Alumina crystal grain orientation control technology suppresses crater damage due to chip abrasion.

<p><b>Conventional Tool</b></p>  <p>5 min TiCN layer exposed</p> <p>14 min End of tool life</p> <p>Crater damage progression due to peeling of alumina layer.</p> <p>Work Material: 100Cr6 //(external continuous) Insert: CNMG120408NGU Cutting Data: <math>v_c = 300</math> m/min, <math>f = 0,3</math> mm/rev, <math>a_p = 1,5</math> mm, wet</p>	<p><b>AC8015P</b></p>  <p>5 min Minor wear</p> <p>17 min TiCN layer exposed</p> <p>20 min End of tool life</p> <p>Suppresses crater damage due to chip abrasion</p> <p>Twice the crater wear resistance</p>
--	---

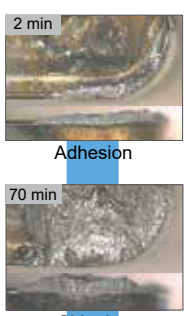

#### AC8020P

Alumina coating with even higher strength suppresses chipping.

<p><b>Conventional Tool</b></p>  <p>400 impacts Minimal chipping</p> <p>1600 impacts Tool life</p> <p>Chipping</p> <p>Work Material: 34CrMo4 //(incl. intermittent forge sections) Insert: CNMG120408NGU Cutting Data: <math>v_c = 250</math> m/min, <math>f = 0,3</math> mm/rev, <math>a_p = 1,5</math> mm, wet</p>	<p><b>AC8020P</b></p>  <p>400 impacts Minor damage</p> <p>1600 impacts Minor damage</p> <p>4000 impacts Minimal chipping</p> <p>Balance of high wear resistance and stability</p> <p>2,5x chipping resistance or more</p>
---	---

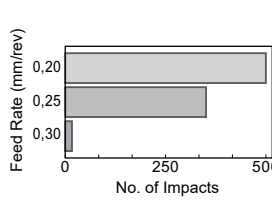

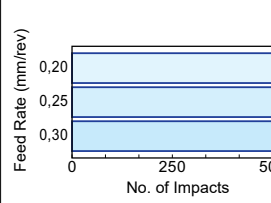

#### AC8025P

Surface smoothing treatment significantly suppresses adhesion and chipping.

<p><b>Conventional Tool</b></p>  <p>2 min Adhesion</p> <p>70 min Chipping</p> <p>Unable to continue</p> <p>Work Material: 15CrMo5 (Face) Insert: CNMG120408NGU Cutting Data: <math>v_c = 100-300</math> m/min, <math>f = 0,3</math> mm/rev, <math>a_p = 1,5</math> m, wet</p>	<p><b>AC8025P</b></p>  <p>2 min Normal wear</p> <p>70 min Minor damage only, able to continue</p> <p>120 min Minor damage only, able to continue</p> <p>Suppresses adhesion with ultra-smooth surface</p> <p>Twice the adhesion fracture resistance</p>
--	--

#### AC8035P

Special surface treatment reduces tensile stress in the coating layer, significantly suppressing breakages.

<p><b>Conventional Tool</b></p>  <p>Feed Rate (mm/rev)</p> <p>No. of Impacts</p>  <p>Unable to continue</p> <p>Work Material: 34CrMo4 (external interrupted) Insert: CNMG120408NGU Cutting Data: <math>v_c = 160</math> m/min, <math>f = 0,2-0,3</math> mm/rev, <math>a_p = 2,0</math> mm, dry</p>	<p><b>AC8035P</b></p>  <p>Feed Rate (mm/rev)</p> <p>No. of Impacts</p>  <p>All corners able to continue</p> <p>Suppresses crack growth and breakages by reducing tensile stress</p> <p>Twice the fracture resistance</p>
--	--

### Grades

**ABSOTECH** **ABSOTECH** **ABSOTECH** **ABSOTECH**  
**AC6020M / AC6030M / AC6040M / AC1030U**

- AC6020M** Employs "Absotech Platinum", a new CVD coating. The first recommended grade for continuous stainless steel machining that achieves a good balance between wear resistance and fracture resistance by combining a hardened substrate with excellent wear resistance.
- AC6030M** Employs "Absotech Platinum", a new CVD coating. The first recommended grade for general machining of stainless steel that drastically reduces the occurrence of abnormal damage, which is a problem in stainless steel machining. Achieves long and stable machining thanks to the improved coating strength and excellent adhesion.
- AC6040M** Employs "Absotech Bronze", a new PVD coating and exclusive tough carbide substrate. The first recommended grade for interrupted machining of stainless steel that drastically improves the reliability in unstable machining thanks to the excellent adhesion and peel-off resistance of the new PVD coating as well as the improved fracture resistance of the exclusive carbide substrate.
- AC1030U** Employs "Absotech Bronze", a new PVD coating with a special tough carbide substrate. Achieving excellent machined surface quality with a high-quality cutting edge that reduces adhesion and micro-chipping.

### Performance

#### AC6020M

##### Continuous Cutting (Medium Speed)

Work Material: X2CrNiMo17 13 2    Insert: CNMG 120408 NGU  
 Cutting Conditions:  $v_c = 150$  m/min,  $f = 0,3$  mm/rev,  $a_p = 2,0$  mm, wet

##### Continuous Cutting (High Speed)

Work Material: X2CrNiMo17 13 2    Insert: CNMG 120408 NGU  
 Cutting Conditions:  $v_c = 200$  m/min,  $f = 0,3$  mm/rev,  $a_p = 2,0$  mm, wet

#### AC6030M

##### Continuous Cutting

Work Material: X6CrMo17 12 2    Insert: CNMG 120408 NEX  
 Cutting Conditions:  $v_c = 200$  m/min,  $f = 0,2$  mm/rev,  $a_p = 2,0$  mm, wet

##### Interrupted Cutting

Work Material: X6CrMo17 12 2    Insert: CNMG 120408 NGU  
 Cutting Conditions:  $v_c = 100$  m/min,  $f = 0,1$  mm/rev,  $a_p = 1,0$  mm, wet

### Grades

**ABSOTECH** <sup>New</sup> **ABSOTECH** **ABSOTECH**  
**AC5005S / AC5015S / AC5025S / EH510 / EH520**

PVD grade with excellent wear and thermal resistance.

**AC5005S** High-speed, high-efficiency grade with great high-temperature strength, which realises excellent wear resistance in high-efficiency machining.

**AC5015S** The 1st recommended grade for turning exotic alloys as it realises stable tool life with high-speed, high-efficiency machining.

**AC5025S** High-toughness grade for realising stable tool life for interrupted cutting machining or mill-scaled work.

Carbides with excellent thermal, wear, and fracture resistance for use with exotic alloys. Lineup also includes new chipbreaker design.

**EH510** General purpose grade for titanium machining that features excellent wear and thermal resistance. For applications from roughing to finishing.

**EH520** Tough grade for titanium machining with excellent fracture and thermal resistance. Perfect for interrupted cutting and mill-scaled work.

### Performance

#### AC5005S

## Grades

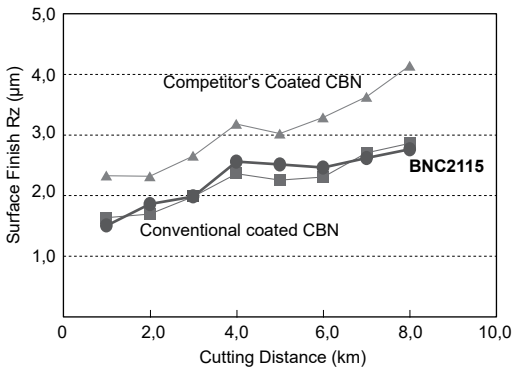

### **BNC2115 / BNC2125 / BN1000 / BN2000**

- BNC2115** New  
High-precision grade realizing long tool life with excellent surface roughness and stable machining. Maintains excellent surface roughness thanks to a high notch-wear resistant coating and tough CBN substrate.
- BNC2125** New  
1st recommendation grade, balancing excellent wear resistance and fracture resistance in hardened steel machining. Along with a tough CBN substrate, the coating combines wear resistance and toughness to achieve long, stable tool life even in high-efficiency and interrupted machining.
- BN1000**  
For high speed machining. BN1000 provides the highest wear resistance of all uncoated SUMIBORON grades. Features improved fracture resistance while still placing a priority on wear resistance.
- BN2000**  
General purpose grade suitable for typical hardened steel machining applications. Provides a high degree of fracture and wear resistance.

## Performance

### BNC2115

Continuous Cutting of Hardened Steel

Work Material: SCM415H, 58-62HRC  
 Insert: DNGA 150408 NC4  
 Cutting Conditions:  $v_c = 200$  m/min,  $f = 0,1$  mm/rev,  $a_p = 0,15$ mm, wet

### BNC2125

Interrupted Cutting of Hardened Steel

Work Material: SUJ2, 58-62HRC  
 Insert: DNGA 150408 NC4 S01225  
 Cutting Conditions:  $v_c = 150$  m/min,  $f = 0,15$  mm/rev,  $a_p = 0,5$  mm, 63 m/times, dry

### BN1000 / BN2000

Wear Resistance (Continuous Cutting)

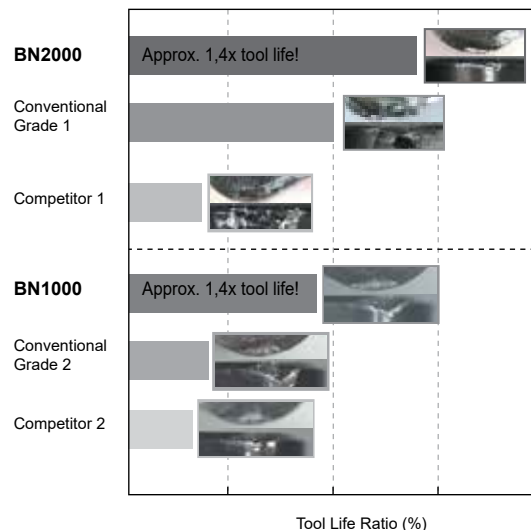

Work Material: 15CrMo5, Round Bar (58-62HRC)  
 Cutting Conditions:  $v_c = 100$  m/min,  $f = 0,1$  mm/rev,  $a_p = 0,2$  mm, dry

Work Material: 100Cr6, Round Bar (58-62HRC)  
 Cutting Conditions:  $v_c = 150$  m/min,  $f = 0,1$  mm/rev,  $a_p = 0,2$  mm, dry

Chipping Resistance (Interrupted Cutting)

(Comparison based on conventional BN2000 as 100%.)

Work Material: 15CrMo5, 8V Grooved Material (58-62HRC)  
 Insert: CNGA120408 NU-2  
 Cutting Conditions:  $v_c = 150$  m/min,  $f = 0,1$  mm/rev,  $a_p = 0,2$  mm, dry

### Application Range

**ABSOTECH**

### AC1030U

Employs a new PVD coating, with a special tough carbide substate. Achieving excellent machined surface quality with a high-quality cutting edge that reduces adhesion and micro-chipping.

### AC1030U Performance

Material: X5CrNiS18-10, 1.4301  
 Insert: DCGT11T302RFY (AC1030U)  
 Cutting Data:  $v_c = 100$  m/min,  $f = 0,05$  mm/rev,  $a_p = 0,1$  mm, wet (Oil)

#### Wear Resistance

#### Roughness

### Application Examples

#### STKM12C-EC, Pipe

Insert: CCGT060201LFX (AC1030U)  
 Cutting Data:  $v_c = 196$  m/min,  $f = 0,04$  mm/rev,  $a_p = 0,4$  mm, wet

#### C45, Stator Shaft

Insert: VCGT110302RFX (AC1030U)  
 Cutting Data:  $v_c = 195$  m/min,  $f = 0,12$  mm/rev,  $a_p = 0,175-0,25$  mm, wet

#### X5CrNiS18-10, 1.4301, Valve Body

Insert: VCGT110301RFY (AC1030U)  
 Cutting Data:  $v_c = 31,5$  m/min,  $f = 0,025$  mm/rev,  $a_p = 0,2$  mm, wet

#### X6Cr17, Sensor Housing

Insert: DCGT11T304M NFC (AC1030U)  
 Cutting Data:  $v_c = 50$  m/min,  $f = 0,06$  mm/rev,  $a_p = 0,2$  mm, wet

# New Grades for Milling

**ACU2500 / XCU2500 / XCK2000**

**New**

**New**

Insert Selection

## Features of ACU2500

- Utilizing ABSOTECH, a new coating with excellent wear and chipping resistance.
- Adopts a carbide substrate with excellent fracture resistance and wear resistance, realising stable long tool life with various work material grades. Our 1st recommended grade for milling.

## Features of XCU2500 / XCK2000

- Uses the revolutionary ABSOTECH X coating, combining the wear resistance of conventional CVD coatings and fracture resistance equivalent to that of PVD coatings.
- Superb long tool life in machining of steel, cast iron, and stainless steel.

Applicable Grades: ACU2500, ACP3000, ACK3000

Applicable Grades: XCU2500, XCK2000

## Application Range

### P Steel

### M Stainless Steel

### K Cast Iron

### S Exotic Alloy

# Coated Carbide

**ABSOTECH X** : Revolutionary coating technology that realises superb tool life.

**CVD**

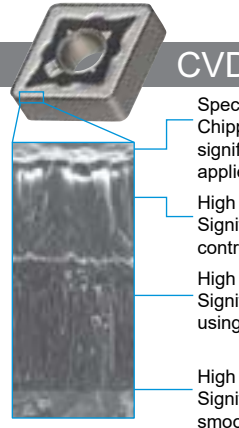

Pure cubic crystal AlTiN with high Al content:  
With proprietary structural control technology, differently composed layers of AlTiN are stacked at the nanometre level. With a high-Al composition containing over 80% Al on average, it also maintains a cubic crystalline structure to achieve excellent thermal resistance and high hardness. Vastly improved wear resistance.

**Special Surface Treatment:**  
Proprietary surface treatment introduces high compression stress to the coating, suppressing the development of cracks. Greatly improved fracture and thermal crack resistance.

Realises extremely long tool life for general machining through high-efficiency machining, using revolutionary technology combining wear resistance and fracture resistance.

[ABSOTECH X] For CVD Milling  
Applicable Grades  
For Milling: **XCU2500, XCK2000**

**ABSOTECH** : New coating technology that realises absolute stability.

**CVD**

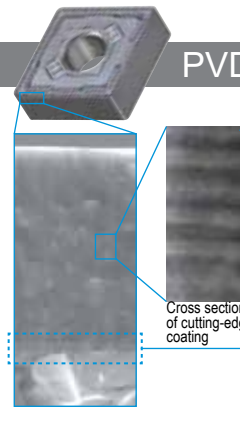

**Special Surface Treatment:**  
Chipping resistance and adhesion resistance are significantly improved by special surface treatment applied to suit the application.

**High Strength Alumina Layer:**  
Significantly improves the coating strength by controlling crystal growth direction.

**High Hardness Micro-Grain TiCN Layer:**  
Significantly improves the coating hardness by using a fine and uniform crystal structure.

**High Adhesion Technology:**  
Significantly improves adhesion strength through a smooth interface between the coating and carbide substrate.

- Suppresses abnormal damage such as chipping and adhesion. Stable machining is achieved in various situations.
- Next-level high strength and high hardness coating is achieved. Achieves long, stable tool life even in high-efficiency machining.

**PVD**

The Proprietary Super Multi-layered Coating Structure:  
Advanced nanotechnology enables nanometre level thickness (1 nanometre is one billionth of a meter). Hardness, thermal resistance and toughness are significantly improved by alternately layering one thousand layers of super thin films.

**High Adhesion Technology:**  
Significantly improves adhesion strength through advanced control technology at the interface of the coating and carbide substrate.

- Optimised coating composition according to application. Achieves stable machining regardless of the work material.
- Significantly improves chipping resistance by improving coating adhesion strength. Stable machining is realised even under high load conditions.

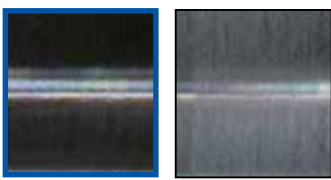

Applicable Grades  
For Turning: Steel AC8015P, AC8020P, AC8025P, AC8035P  
Stainless Steel AC6020M, AC6030M  
Cast Iron AC4010K, AC4015K  
For Milling: ACP2000, ACK2000

Applicable Grades  
For Turning: Stainless Steel AC6040M  
Exotic Alloy AC5005S, AC5015S, AC5025S  
Small Lathes AC1030U  
For Milling: **ACU2500, ACP3000, ACK3000**

**Brilliant Coat**

Brilliant Coat provides excellent lubricity for higher quality machining.

- PVD coating with excellent wear resistance and lubricity.
- Suppresses reactions with work material and realises beautiful machined surfaces.

Brilliant Coat      Conventional Coating

**PVD**

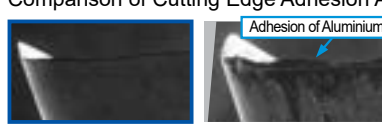

Work Material: STKM13A  
Insert: CNMG120408NLU  
Cutting Conditions: v<sub>c</sub>: 100 m/min  
f: 0,15 mm/rev  
a<sub>p</sub>: 1,0 mm, wet

Applicable Grades  
For steel turning T1500Z, T2500Z

**AURORA Coat** (DLC : Diamond Like Carbon)

Using our proprietary PVD process technology, we have developed a hydrogen-free DLC coating that is extremely hard and smooth.

Comparison of Cutting Edge Adhesion After Cutting ADC12

AURORA Coat      Uncoated

- Second only to diamond in terms of hardness, this smooth coating has a low coefficient of friction and provides excellent adhesion resistance to deliver better-quality machined surfaces.
- Can be used for high-speed, high-efficiency cutting of aluminium alloys, copper alloys, resins, and more.

**PVD**

Work Material: STKM13A  
Cutting Conditions: v<sub>c</sub>: 100 m/min  
f: 0,15 mm/rev  
a<sub>p</sub>: 1,0 mm, wet

Applicable Grades  
For Milling DL1000, DL2000  
For Endmilling DL1000, DL1200  
For Drilling DL1300, DL1500

## Characteristic Values

### For Turning (CVD)

Class	Grade	Hardness (HRA)	TRS (GPa)	Coating Type	Coating Thickness (µm)	Characteristics	Old Grades
<b>P</b>	AC8015P	91,0	2,3	Absotech	14	For high-speed and high-efficiency machining of steel. Crystal orientation control technology is used to drastically suppress the advancement of crater wear, achieving long, stable tool life during high-speed and high-feed cutting.	AC810P
	<b>New</b> AC8020P	90,5	2,2	Absotech	18	Our 1st recommended grade for mill-scale work on forged material. Alumina coating with even higher strength balances outstanding stability and wear resistance in mill-scale work.	AC820P
	AC8025P	90,1	2,3	Absotech	12	A P20 grade that drastically reduces the occurrence of abnormal damage and achieves long and stable tool life by employing a special carbide substrate and the new Absotech Platinum coating.	AC820P
	AC8035P	89,4	2,6	Absotech	9	For interrupted machining of steel. Coating layer tensile stress removal technology greatly improves fracture resistance and achieves long, stable tool life during heavy interrupted cutting.	AC830P
<b>M</b>	AC6020M	90,1	2,3	Absotech	5	An M20 grade that maintains wear resistance in stainless steel machining while drastically reducing the occurrence of abnormal damage by employing a special carbide substrate and the new Absotech Platinum coating.	AC610M
	AC6030M	89,5	2,7	Absotech	5	The first recommended grade for general machining of stainless steel that drastically reduces the occurrence of abnormal damage in stainless steel machining and achieves long and stable tool life by employing a new coating: Absotech Platinum.	AC630M
	AC630M	89,5	2,7	Super FF Coat	5	A general purpose grade featuring improved wear and fracture resistance during stainless steel cutting. Utilises a special tough carbide substrate with a thin Super FF Coat.	AC304
<b>K</b>	AC4010K	91,1	2,5	Absotech	20	1st recommended grade for turning grey cast iron. For high-speed cast iron milling. New thick coating realizes stable long tool life even with ultra-high-speed machining of grey cast iron at $v_c = 700$ m/min.	AC405K
	AC4015K	91,1	2,5	Absotech	16	1st recommended grade for turning ductile cast iron. New high-adhesion, high-strength coating realises high wear resistance and chipping resistance for stable long tool life over a wide range of cutting conditions.	AC415K
	AC420K	91,1	2,5	Super FF Coat	12	A new, extremely versatile grade that can be used for rough, interrupted cutting of ductile and grey cast iron. Employs special, ultra-hard carbide substrate and Super FF Coat to provide stability and long tool life.	AC700G

### For Milling (CVD)

Class	Grade	Hardness (HRA)	TRS (GPa)	Coating Type	Coating Thickness (µm)	Characteristics	Old Grades
<b>P</b>	ACP100	89,3	3,1	Super FF Coat	6	A grade that employs a tough carbide substrate and thin-layer Super FF Coat to provide superior thermal crack and wear resistance in high-speed milling of steel.	AC230
	ACP2000	89,5	3,2	Absotech	10	For high-speed machining of steel. Stable long tool life with high-speed machining is realized by adopting a tough carbide substrate and a new coating with excellent thermal crack resistance.	ACP100
	<b>New</b> XCU2500	89,5	3,2	AbsotechX	6	General purpose grade for a wide variety of materials such as steel, cast iron and stainless steel. New coating combining wear and fracture resistance realises long tool life in medium-speed to high-speed machining.	
<b>M</b>	ACM200	89,8	3,4	Super FF Coat	6	A grade ideal for hardened steel machining that provides excellent wear and heat resistance by employing a newly-developed ultra-hard carbide and Super FF Coat.	AC230
<b>K</b>	ACK100	92,0	2,4	Super FF Coat	6	A grade that employs a high-strength carbide substrate and Super FF Coat to provide excellent wear resistance in high-speed milling.	—
	ACK200	91,7	2,5	Super FF Coat	6	A grade that employs a tough carbide substrate and thin-layer Super FF Coat to provide superior thermal crack and wear resistance for high-speed milling.	AC211
	ACK2000	91,7	3,1	Absotech	10	For high-speed cast iron milling. Stable long tool life with high-speed machining is realized by adopting a tough carbide substrate and a new coating with excellent thermal resistance.	ACK100 ACK200
	<b>New</b> XCK2000	91,7	2,5	AbsotechX	6	For high-speed cast iron milling. Along with a high-hardness carbide substrate, the new coating combining wear and fracture resistance realises superb long tool life in medium-speed to high-speed machining.	—

## Characteristic Values

### For Turning (PVD)

Class	Grade	Hardness (HRA)	TRS (GPa)	Coating Type	Coating Thickness (μm)	Characteristics	Old Grades
<b>P</b>	<b>T1500Z</b> (Cermet)	92,0	2,2	Brilliant Coat*	3	For finishing of steel. Adopts Brilliant Coat for excellent lubricity and higher machined surface quality.	T2000Z
	<b>T2500Z</b> (Cermet)	91,8	2,4	Brilliant Coat*	3	For finishing of steel. The use of Brilliant Coat with excellent lubricity and a tough cermet substrate realises excellent machined surface quality and superb stability.	T3000Z
	<b>AC530U</b>	91,4	3,3	Super ZX Coat	3	For interrupted and general steel cutting. Utilizing the super multi-layered PVD coating of nanometre thick TiAlN and AlCrN layers, coupled with a fine-grained super tough substrate for excellent fracture resistance.	ACZ310
<b>M</b>	<b>AC6040M</b>	91,6	3,8	Absotech	3	The first recommended grade for interrupted machining of stainless steel that drastically improves the reliability in unstable machining thanks to the excellent adhesion and peel-off resistance of the new Absotech Bronze PVD coating, as well as the improved fracture resistance of the exclusive ultra-hard carbide substrate.	AC530U
	<b>AC530U</b>	91,4	3,3	Super ZX Coat	3	Heavy interrupted machining and stainless steel machining. Utilizing the super multi-layered PVD coating of nanometre thick TiAlN and AlCrN layers, coupled with a fine-grained super tough substrate for excellent fracture resistance.	ACZ310
<b>S</b>	<b>AC5005S</b>	93,1	2,8	Absotech	5	Grade for high-speed and high-efficiency machining of exotic alloys. The use of a dedicated carbide substrate with great high-temperature strength realises excellent wear resistance in high-speed, high-efficiency machining.	—
	<b>AC5015S</b>	92,7	3,2	Absotech	5	The first recommended grade for turning exotic alloy. Adopts a carbide substrate with excellent thermal resistance and a new coating with excellent wear resistance and chipping resistance, realizing stable long tool life over a wide range of cutting conditions.	AC510U
	<b>AC5025S</b>	91,8	3,6	Absotech	5	For partially interrupted to interrupted machining of exotic alloy. Adopts a carbide substrate with excellent fracture resistance and a new coating with excellent wear resistance and chipping resistance, realizing stable long tool life with unstable cutting conditions.	AC520U
<b>H</b>	<b>AC503U</b>	93,2	1,7	Super ZX Coat	3	For hardened steel. Utilizing the super multi-layered PVD coating of nanometre thick TiAlN and AlCrN layers, coupled with an ultra-hard substrate for excellent wear resistance.	—
Small Product Machining	<b>ACZ150</b>	91,4	3,3	ZX Coat	1	For small tools, and high-precision finishing to general finishing applications. TiN ultra-thin coating and fine-grained, super tough substrate combine to give good edge sharpness and superior cut finish.	—
	<b>AC1030U</b>	91,6	3,8	Absotech	2	For precision machining that supports a wide range of work materials. Employs the new "Absotech Bronze" coating with excellent adhesion and peel-off resistance to deliver excellent machined surface quality with improvements in cutting edge quality and superb stability.	—

### For Milling (PVD)

Class	Grade	Hardness (HRA)	TRS (GPa)	Main Coating Components	Coating Thickness (μm)	Characteristics	Old Grades
<b>P</b>	<b>ACU2500</b>	91,6	3,8	Absotech	3	General purpose grade supporting steel, stainless steel and cast iron machining. Adopts a carbide substrate with excellent fracture resistance and wear resistance, plus a new coating with wear and chipping resistance, realizing stable long tool life with various work material grades.	—
	<b>ACP200</b>	89,5	3,2	Super ZX Coat	3	For general machining of general and die steel. Employs PVD coating consisting of multiple nanometre-thin layers. A general grade that achieves a good balance between fracture resistance and wear resistance when combined with an exclusive tough substrate.	ACZ330
	<b>ACP300</b>	89,3	3,1	Super ZX Coat	3	For interrupted machining and stainless steel machining. Employs PVD coating consisting of multiple nanometre-thin layers. Provides excellent fracture resistance when combined with an ultra-tough substrate.	ACZ350
	<b>ACP3000</b>	89,5	3,2	Absotech	3	1st recommended grade for milling steel. Carbide substrate with excellent thermal crack resistance, plus a new coating with excellent wear and chipping resistance, realizes stable long tool life over a wide range of cutting conditions.	ACP200 ACP300
<b>M</b>	<b>ACM100</b>	91,4	3,3	Super ZX Coat	3	A grade that provides excellent wear resistance by employing an ultra-hard fine-grained carbide and New Super ZX Coating.	ACZ310
	<b>ACM300</b>	89,8	3,4	Super ZX Coat	3	The first recommended grade for stainless steel machining that achieves a good balance between wear resistance and fracture resistance by employing a newly-developed ultra-hard carbide and New Super ZX Coating.	—
<b>K</b>	<b>ACK300</b>	91,4	3,3	Super ZX Coat	3	General-purpose grade with an excellent balance of wear and fracture resistance.	ACZ310
	<b>ACK3000</b>	91,7	3,1	Absotech	3	1st recommended grade for milling cast iron. Adopts a high thermal conductivity carbide substrate and a new coating with excellent wear and chipping resistance, realizing stable long tool life over a wide range of cast iron machining operations.	ACK300
<b>N</b>	<b>DL1000</b>	92,9	2,1	AURORA Coat (DLC Coat)	0,5	For milling non-ferrous metal, utilizing DLC coat with a low coefficient of friction and excellent adhesion resistance.	—
	<b>DL2000</b>	91,6	3,8	AURORA Coat (DLC Coat)	0,5	For milling non-ferrous metal, utilizing DLC coat with a low coefficient of friction and excellent adhesion resistance.	—

# TiC / TaC (Titanium Carbide) Cermet

Various grades and expanded lineup of catalogue items meet a wide range of finishing needs.

Lineup includes wear-resistant T1000A, general purpose T1500A, general purpose coated cermet T1500Z and tough T2500A. Significantly expanded lineup of catalogue items for a wide variety of finishing applications.

## Characteristics

### Uncoated Cermet

**T1000A** High Speed Finishing Grade  
High speed finishing grade with excellent wear resistance. Improved wear and fracture resistance. Solid solution hard phase reduces reaction with steel. Perfect for high-speed continuous finishing of steel, cast iron and powdered metal.

### Coated Cermet

**T1500Z** New General Purpose Grade  
General purpose coated cermet grade that employs new Brilliant Coat\* PVD coating with excellent lubricity. Excellent wear resistance provides long tool life. Reduces adhesion of work material for beautiful finished surfaces.

### Uncoated Cermet

**T1500A**  
A general purpose grade that provides both wear and fracture resistance with higher-quality surface finish. Mixing hard phases of different functionality, grain size and composition improves balance of wear and fracture resistance. Improved cutting edge treatment technology provides beautiful finished machined surfaces.

### Coated Cermet

**T2500Z**  
Tough grade with excellent fracture resistance and thermal crack resistance. Fine, uniform grain structure greatly improves toughness. Improves thermal crack resistance due to the high thermal conductivity and realises long stable tool life. Uses Brilliant Coat, with excellent lubricity to realise excellent machined surface quality.

## Characteristic Values

# WC (Tungsten Carbide) „Igetalloy“

Igetalloy carbides have a solid history and a big variety of grades to suit many different applications. They are widely used and appreciated for their superior performance.

The Igetalloy line-up consists of carbide cutting tools that are available in a variety of different structures and compositions, each differing in terms of WC grain size and containing varying amounts of CO binder and TiC, TaC, and other double carbide components. The wide selection enables excellent wear resistance and toughness with a variety of work materials and cutting conditions.

# CBN (Cubic Boron Nitride) SUMIBORON

**High hardness and heat resistance for cutting high hardness steel and hard cast iron. Long tool life with high-speed finishing of grey cast iron.**

In 1977, Sumitomo Electric Hardmetal successfully developed a revolutionary CBN sintered tool - SUMIBORON. The main component in SUMIBORON is Cubic Boron Nitride with a special ceramic binder sintered under super high pressure and temperature. As compared to other conventional tool materials, CBN has higher hardness and excellent heat resistance.

With these distinct characteristics, SUMIBORON can perform machining of hardened steel, high hardness cast iron and exotic metals where previously only grinding was done. Furthermore, excellent efficiency and longer tool life can also be achieved from high speed machining of cast irons.

## Characteristics

Classifications	Structure	CBN Content	Hardness (GPa)	Grades	Application	Characteristics
Purely CBN particles, firmly bonded		High	54	NCB100	Cast Iron, Titanium Alloy, Pure Titanium, Co-Cr-Alloy, Cemented Carbide, Cermet	Containing no binder, the nano-to sub-micron CBN particles have a directly bonded structure. The high hardness and thermal conductivity make it highly efficient with a long tool life when machining exotic alloys such as titanium alloys and Co-Cr alloys.
Mainly CBN grains fused together		↑ ↓	↑ ↓	BN7000 BN7500 BN7115 BNC8125 BNS8125 BNS800	Carbide, Chilled cast iron, Ni-Hard cast iron, Heat-resistant alloy, Cast iron Sintered ferrous alloy	High carbon content. Structure consists of strongly fused CBN grains. Suited to cutting cast iron, heat-resistant alloy, ultra-hard alloy, and other hard materials.
Mainly CBN grains held together with a binder				BN1000, BN2000, BN350 BNX10, BNX20, BNX25 BN500, <b>New</b> BNC2115, <b>New</b> BN2010, BN2020 BNC300, BNC100, BNC160 BNC200, BNC500	Alloy steel, Case hardened steel, Carbon tool steels, Bearing steel, Die steel, Ductile cast iron	CBN grains are fused together strongly with a special ceramic binder. Strong CBN binding force gives superior wear resistance and toughness when cutting hardened steel and cast iron.

## SUMIBORON

### Characteristic Values

Class	Grade	Binder	Carbon Content (%)	Grain Size (µm)	Hardness HV (GPa)	TRS (GPa)	Main Coating Components	Coating Thickness (µm)	Characteristics
	<b>New</b> BNC2115	TiN	60–65	3	31–33	1,3–1,4	TiAlSiN super multilayered coating	3	Maintains excellent surface roughness thanks to coating with high notch wear resistance and tough CBN substrate
	<b>New</b> BNC2125	TiN	65–70	4	33–35	1,5–1,6	TiAlSiN super multilayered coating	3	Along with a tough CBN substrate, the coating combines wear resistance and toughness to achieve even more stable machining.
<b>H</b>	BNC2010	TiCN	50–55	2	30–32	1,1–1,2	TiCN multi-layered	2	Improves the wear resistance of coating and substrate and stably achieves excellent surface roughness.
	BNC2020	TiN	70–75	5	34–36	1,4–1,5	TiAlN multi-layered	2	Provides long tool life in general and high-efficiency cutting thanks to tough substrate coated with a highly wear-resistant and highly adhesive layer.
	BNC100	TiN	40–45	1	29–32	1,0–1,1	TiAlN	3	Highly wear resistant coating makes this grade suited for high speed finishing.
	BNC160	TiN	60–65	3	31–33	1,2–1,3	TiAlN/TiCN	3	Stable, high precision finishing of hardened steel.
	BNC200	TiN	65–70	4	33–35	1,4–1,5	TiAlN/TiCN	3	Tough substrate with high wear resistant coating provide longer tool life.
	BNC300	TiN	60–65	1	33–35	1,5–1,6	TiAlN	1	Suited for finishing when there is a combination of continuous and interrupted cutting.
	BNX10	TiCN	40–45	3	27–31	0,9–1,0	–	–	Optimum wear resistance. Suited to continuous, high-speed cutting.
	BN1000	TiCN	40–45	1	27–31	0,9–1,0	–	–	Ultimate wear and fracture resistance. Suited to high-speed cutting.
	BNX20	TiN	55–60	3	31–33	1,0–1,1	–	–	Crater resistant grade, suitable for high efficiency cutting under high temperature conditions.
	BNX25	TiN	65–70	4	29–31	1,0–1,1	–	–	Excellent fracture resistance during high speed cutting. Suited to high speed interrupted cutting of hardened steel.
	BN2000	TiN	50–55	2	31–34	1,1–1,2	–	–	A general purpose grade for hardened steel that provides a high degree of fracture and wear resistance.
	BN350	TiN	60–65	1	33–35	1,5–1,6	–	–	High cutting edge strength. suited to heavy interrupted cutting.
Sintered Components	<b>New</b> BN7115	Co Compound	90–95	1	41–44	2,2–2,3	–	–	Grade balancing ultimate cutting edge sharpness with fracture resistance, suitable for finishing of sintered alloy.
	BN7500	Co Compound	90–95	1	41–44	2,0–2,1	–	–	Maintains optimum cutting edge sharpness. Suited for finishing of sintered alloy.
	BN7000	Co Compound	90–95	2	41–44	1,8–1,9	–	–	Improved wear and fracture resistance in rough cutting of sintered components.
<b>K</b>	<b>New</b> BNC8115	Al Alloy	85–90	8	39–42	0,95–1,15	TiAlN	2	Grade with 100% solid CBN structure, using PVD coating with excellent wear resistance to enable roughing operations.
	<b>New</b> BNS8125	Al Alloy	85–90	8	39–42	0,95–1,15	–	–	Grade with 100% solid CBN structure that exhibits excellent wear and fracture resistance.
	BN7000	Co Compound	90–95	2	41–44	1,8–1,9	–	–	Improved wear and fracture resistance in rough cutting of cast iron and exotic alloy.
	BNS800	Al Alloy	85–90	8	39–42	0,9–1,1	–	–	100% solid CBN structure with good thermal impact resistance.
	BNC500	TiC	60–65	4	32–34	1,1–1,2	TiAlN	3	Substrate with excellent wear resistance and coating makes this grade suited for hard-to-cut cast iron.
<b>S</b>	NCB100	–	100	–0,5	51–54	1,8–1,9	–	–	Achieves high-efficiency, improved machining accuracy and long tool life in machining of exotic alloys such as titanium alloy and Co-Cr alloys.

# PCD (Polycrystalline Diamond) SUMIDIA

**Excellent wear resistance, longer tool life, and high-speed, high-efficiency, high-precision cutting of non-ferrous metals and non-metals.**

SUMIDIA is a polycrystalline diamond material made from sintered diamond powder that was first created using our proprietary technology in 1978.

SUMIDIA's superior wear resistance achieves longer tool life, high speed, high efficiency and high precision in non-metal cutting and non-ferrous metal applications including aluminium, copper, magnesium and zinc alloys.

SUMIDIA Binderless uses nano-polycrystalline diamond for the cutting edge, demonstrating excellent wear resistance and fracture resistance.

In particular, it achieves extended tool life and machining accuracy superior to conventional polycrystalline diamond when machining hard brittle materials such as cemented carbides.

## Features

Diamond particles on the order of sub-microns to several dozen microns, sintered at high density.

## Structure

## Grade Range Map

Class	Series	Finishing – Light Cutting		Medium Cutting	Rough – Heavy Cutting
<b>Brittle Materials</b>	Classification	01	10	20	30
	SUMIDIA Binderless	NPD10			
	SUMIDIA		DA90		
<b>N</b>	Classification	N01	N02	N20	N30
	SUMIDIA	DA1000			
		DA150			
		DA90			

## Characteristic Values

Class	Grade	Binder	Carbon Content (%)	Grain Size (µm)	Hardness HV (GPa)	TRS (GPa)	Characteristics
<b>Brittle Materials</b>	NPD10	Co	100	<=0,05	120–130	≈ 3,15	100% diamond that directly binds nano-order diamond particles with high strength. Demonstrates optimum wear and fracture resistance as well as the best edge sharpness.
<b>N</b>	DA1000	Co	90–95	–0,5	110–120	≈ 2,60	High density sintered material made of ultra-fine diamond particles that demonstrates optimum wear and fracture resistance, and edge sharpness.
	DA150	Co	85–90	5	100–120	≈ 1,95	Sintered material made of fine diamond particles that provides a good balance of workability and wear resistance.
	DA90	Co	90–95	50	50–65	≈ 1,10	Coarse sintered diamond particles, with high diamond content for excellent wear resistance.

# PCD (Polycrystalline Diamond) SUMIDIA Binderless

Grades

SUMIDIA Binderless Series uses nano-polycrystalline diamond for the cutting edge and demonstrates excellent wear and fracture resistance compared to conventional sintered diamond tools.

In particular, SUMIDIA Binderless Series allows for improvements in tool life and machining precision that go far beyond conventional diamond tools in the machining of hard brittle materials, such as carbide.

### Excellent for High Precision Machining of Carbide

Nano-polycrystalline diamond with excellent wear resistance achieves high precision on machining of carbide.

### Maintains Superior Dimensional Tolerances Over Many Hours

Greatly reduces the number of tool replacements compared to conventional diamond tools and increases work efficiency while reducing total costs.

### Suitable for Hard Brittle Material Machining

Hard brittle materials (such as ceramics) that could only be ground before can now be cut.

## Characteristics

### Comparison of Structure

# Chipbreaker NGU Type

**New**

For positive Inserts

## General Features

Superb versatility handles processes from roughing to finishing.  
Stable machining is realised across a range of conditions through excellent cutting edge sharpness and strength.  
Item range covers a wide variety of applications.

C

## NGU-Chipbreaker for Positive Inserts

D

Excellent chip control performance

K

- Wide chip pocket for various cutting conditions

R

S

Less Vibration

- Improved chip control in a wide application field

T

V

Suppresses chip jamming at high feed rates for ideal chip control

W

- Wide restraining face enables consistent chip control for light to medium cutting.

- Discharges chips well under high feed conditions and suppresses build-up

- Achieves stable machining with both versatility and low resistance

## Improved Fracture Resistance

The two step rake angle geometry ensures outstanding sharpness and hardness.

## Application Range

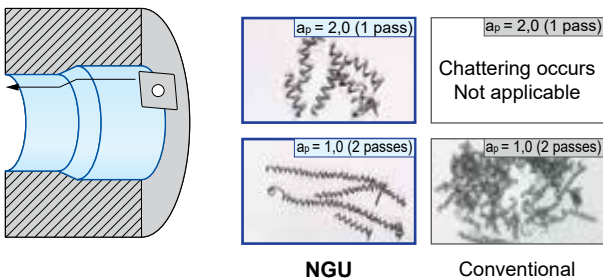

Enhanced application range over conventional products.

## Application Examples

### 24CrMo5, Automotive Parts

Improves chip entanglement for improved machining efficiency.

### 15CrMo5, Fastening Parts

Strong cutting edge design realizes 1,5 times the tool life.

# Chipbreaker NFE Type / NFB Type

## Negative M Class Chipbreakers for Low Carbon and General Steel Turning

### General Features

The high performance NFE type, which ensures stable chip control in a wide range of feed rate, has been added to the chipbreaker series for low carbon steel and general steel turning. Extensive product lines are available to meet various machining requirements.

A positive insert execution of chipbreaker NFB is also available.

### Application Range

### NFE Chipbreaker for Finishing

Supports general purpose machining to high speed machining.

The arc-shaped main breaker ensures stable chip control in a wide feed rate range.

The two step chipbreakers enable stable chip control at a low feed rate of  $f = 0,1$  mm/rev.

The sub-breaker controls cutting chips in profiling.

### Performance

Work Material: Pipe steel (H240LA, 1.0480)  
Insert: CNMG 120408 NFE (AC8025P)  
Cutting Conditions:  $v_c=200$  m/min,  $f=0,4$  mm/rev,  $a_p=0,2$  mm, dry

Excellent chip control under low depth of cut and high feed rate condition

NFE Type (AC8025P)

Conventional

### Application Examples

Work Material: Deep-draw steel (SPHC440)  
Facing Insert: CNMG 120408 NFE (AC8025P)  
Cutting Conditions:  $v_c = 200$  m/min,  $f = 0,15$  mm/rev,  $a_p = 0,2-0,5$  mm, wet

Stable chip curling and breaking in facing of gummy steel.

NFE Type (AC8025P)

Competitor

Work Material: C53E, 1.1210, Ø20-100  
Exter. Turning+Facing Ins.: DNMG 150412 NFE (AC8025P)  
Cutting Conditions:  $v_c=180$  m/min,  $f=0,25$  mm/rev (radius), 0,45 mm/rev (straight section),  $a_p = 0,3$  mm, wet

Stable chip control even at a variable feed rate in shallow cutting.

NFE Type (AC8025P)

Conventional

### NFB Chipbreaker for Low Feed Finishing

Supports low feed machining.

Smooth chipbreaker geometry with a high rake reduces cutting resistance.

The variable rake angle in nose radius makes effective strain on chips and improves the breaking performance.

### Application Example

Work Material: Pipe steel (STKM13C)  
Internal Turning Insert: DNMG 150404 NFB (T3000Z)  
Cutting Conditions:  $v_c = 352$  m/min,  $f = 0,03-0,2$  mm/rev,  $a_p = 0,7$  mm, wet

Small chip curling and control

NFB Type (T3000Z)

Competitor

## General Features

Enables medium roughing of hardened steel in combination with coating and grade AC503U.

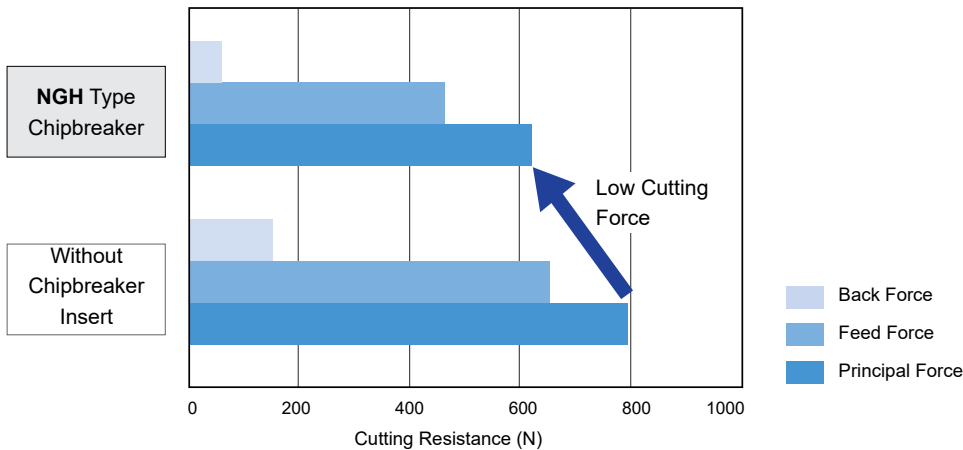

Reduces heat generation and enables deep cutting ( $a_p = 1-3$  mm) of hardened steel by using a wide neutral ground chipbreaker (rake angle:  $4^\circ$ ) and sharp edge.

Discharges chips smoothly.

## Negative Insert for Rough Cutting NGH Type Chipbreaker

### Performance

### Application Examples

Work Material: X155CrVMo12-1 (61HRC)  
 Insert: TNGG 160404 NGH (AC503U)  
 Cutting Conditions:  $v_c = 50$  m/min,  $f = 0,05$  mm/rev,  $a_p = 3,0$  mm, dry

### Recommended Cutting Conditions

Application Range	Cutting Speed $v_c$ (m/min)	Feed Rate $f$ (mm/rev)	Depth of Cut $a_p$ (mm)	Recommended Chipbreaker
Finishing	40-100	0,02-0,10	<1	Without chipbreaker
Medium Roughing	20-60	0,02-0,05	1-3	NGH Type

Work Material: Hardened steel (50-62 HRC), X155CrVMo12-1, X40CrVMo5-1, S6-5-2, High-speed powder and high speed steel

# Chipbreaker NEG Type / NEF Type

For Exotic Alloys and Stainless Steel Turning

## General Features

NEG/NEF type chipbreaker for exotic alloy machining can be used for Titanium alloys, heat-resistant alloys and a variety of other exotic alloys. They deliver excellent wear resistance and superior chip management. These chipbreakers can solve quality problems caused by the unstable tool life and poor chip control provided by conventional chipbreakers for exotic alloys.

## Application Range

## NEG Chipbreaker for Roughing

Provides excellent wear resistance and chip control from general-purpose machining to roughing applications. Reduces damage to insert and eliminates trouble from chips specific to exotic alloys. Also demonstrates very high versatility.

Crater wear advancement is prevented by the round bumps, whilst maintaining excellent control.

The cutting edge maintains the strength slowing the progress of crater wear.

Excellent chip management and wear prevention is delivered by the special rake face design.

Cross Section of Chipbreaker

## Cutting Performance – NEG Type

### Heat Resistant Alloy

Chipbreaker type: NEG (AC510U)

Suppresses the chipping of peripheral cutting edge and notch wear. Excellent chip management.

Work Material: Inconel 718

Insert: CNMG120412

Cutting Data:  
 $v_c = 40$  m/min  
 $a_p = 2,5$  mm  
 $f = 0,2$  mm/rev  
wet  
 $T_c = 7$  min

Conventional tool (S10)

Notch wear / poor chip control

### Titanium Alloy

Chipbreaker type: NEG (AC510U)

Suppresses crater wear and flank wear. Excellent chip management.

Work Material: Ti-6Al-4V

Insert: CNMG120412

Cutting Data:  
 $v_c = 65$  m/min  
 $a_p = 2,5$  mm  
 $f = 0,2$  mm/rev  
wet  
 $T_c = 8$  min

Conventional tool (S10)

Crater wear / flank wear / poor chip control

## Application Example – NEG Type

Inconel 718, machine component

Insert: CNMG120408 NEG (AC520U)  
Cutting Data:  $v_c = 50$  m/min,  $a_p = 1,5$  mm,  $f = 0,3$  mm/rev, wet

Pure Titanium (Ti grade 3), machine component

Insert: CNMG120408 NEG (EH510)  
Cutting Data:  $v_c = 80-100$  m/min,  $a_p = 1,0$  mm,  $f = 0,25$  mm/rev, wet

# Chipbreaker NEG Type / NEF Type

## For Exotic Alloys and Stainless Steel Turning

### Material Application Range

### NEF Chipbreaker for Finishing

The NEF chipbreaker reduces chip curl diameter in finishing applications. Provides extremely good chip management not fluctuated by the material in use.

Main chipbreaker that enables good chip control even at low depths of cut.

Sharp edge with 20° rake angle reduces wear.

The grooves on the rake face reduce heat and assist chip flow away from the workpiece.

Cross Section of Chipbreaker

### Cutting Performance – NEF Type

#### Heat Resistant Alloy

Chipbreaker type: NEF (AC510U)

Improvements in chip control and chip removal management based on small curled chips.

Work Material: Inconel 718

Insert: CNMG120408

Cutting Data:  
 $v_c = 55$  m/min  
 $a_p = 0,3$  mm  
 $f = 0,15$  mm/rev  
 wet  
 $T_c = 8$  min

Conventional tool (S10)

Competitor's product (S10)

There is a problem in the length and the diameter of chips.

#### Titanium Alloy

Chipbreaker type: NEF (AC510U)

Improvements in chip control and chip removal management based on small curled chips.

Work Material: Ti-6Al-4V

Insert: CNMG120408

Cutting Data:  
 $v_c = 80$  m/min  
 $a_p = 0,5$  mm  
 $f = 0,2$  mm/rev  
 wet  
 $T_c = 25$  min

Conventional tool (S10)

Competitor's product (S10)

There is a problem in the length and the diameter of chips.

### Application Example – NEF Type

Inconel 718, shaft component

Great improvement in chip management. Keeps workpieces free of damage. It is possible to omit final polishing process.

NEF (AC510U)

Conventional tool

Insert: CNMG120408 NEF (AC510U)  
 Cutting Data:  $v_c = 45$  m/min,  $a_p = 0,25$  mm,  $f = 0,1$  mm/rev, wet

Duplex stainless steel cover

Improvements in chip management. Suppress damage to finished surface with no entanglement of chips.

NEF (AC510U)

Conventional tool

Insert: CNMG120408 NEF (AC510U)  
 Cutting Data:  $v_c = 55$  m/min,  $a_p = 0,3$  mm,  $f = 0,125$  mm/rev, wet

# Chipbreaker NEM Type

## Chipbreaker for Stainless Steel Turning

### Application Range

### NEM Chipbreaker for Rough Cutting

The NEM chipbreaker achieves excellent fracture and crater resistance and ensures extremely stable machining.

Large radius rake face design that reduces crater wear while maintaining the cutting edge strength.

Bright colors for easy identification of used cutting edge.

Reduces boundary damage by eliminating changing points from the cutting edge.

### Reduction of Damage

	Reduction of Boundary Damage		Reduction of Crater Wear	
	Cutting Edge	Boundary Wear Comparison	Cross Section	Crater Wear Comparison
Conventional Geometry				
NEM Type				
	The NEM chipbreaker has no changing points on the cutting edge, so boundary damage is reduced.		The NEM chipbreaker smoothly evacuates chips thanks to its large radius rake face design, so crater wear is reduced.	

### Application Example

Reduces breakage out of the cutting edge and ensures stable machining.

Reduces crater wear and provides long tool life.

Work Material: X5CrMo17 12 2  
 Insert: SNMG190616NEM (AC6030M)  
 Cutting Conditions:  $v_c = 70$  m/min,  $f = 0,5$  mm/rev,  $a_p = 3,0-8,0$  mm, wet

Work Material: X5CrNiS18 10  
 Insert: SNMG120408NEM (AC6030M)  
 Cutting Conditions:  $v_c = 100$  m/min,  $f = 0,32$  mm/rev,  $a_p = 2,0-2,5$  mm, wet

# Positive M Class Chipbreakers for Low Carbon and General Steel Turning

# Chipbreaker NFB Type / NLB Type

## Application Range

### NFB Chipbreaker for Finishing

The NFB type for finishing and the NLB type for light cutting have been added to the chipbreaker series for low carbon and general steel machining in addition to the already present NLU type for finishing and NSU type for light cutting. The NFB and NLB type chipbreakers improve chip control in finishing of low carbon and general steel.

Ridge reduces edge breakage

High rake breaker wall improves chip breaking performance

Variable rake angle in nose radius increases chip strain and improves chip breaking performance

Cross Section of Chipbreaker

### NLB Chipbreaker for Light Cutting

Strengthened edge reduces unexpected breakage

Special breaker ridge shape achieves stable chip control

Cross Section of Chipbreaker

## Performance

### Chip Control

Achieves stable chip control at small cutting depth and low feed.

NFB Type Chipbreaker (T1500A)

Competitor's Product

Work Material: Pipe (H240LA), Ø 30 Boring  
Insert: TPMT 110304 NFB (T1500A)  
Cutting Conditions:  $v_c = 100$  m/min,  $f = 0,12$  mm/rev,  $a_p = 0,1$  mm, wet

## Performance

### Chip Control ①

Achieves stable chip control in light cutting.

NLB Type Chipbreaker (T1500A)

Competitor's Product

Work Material: Pipe (H240LA), Ø 30 Boring  
Insert: TPMT 110304 NLB (T1500A)  
Cutting Conditions:  $v_c = 200$  m/min,  $f = 0,15$  mm/rev,  $a_p = 0,5$  mm, wet

### Comparison of Surface Roughness of Finished Surfaces

NFB Type Chipbreaker (T1500A)

Competitor's Product

Work Material: Pipe (H240LA), Ø 100 Boring  
Insert: TPMT 110304 NFB (T1500A)  
Cutting Conditions:  $v_c = 200$  m/min,  $f = 0,07$  mm/rev,  $a_p = 0,1$  mm, wet

### Chip Control ②

NLB Type Chipbreaker (T1500A)

Competitor's Product

Doubles the tool life by improving chip control and reducing blemishes on machined surfaces.

Work Material: Hub (C45)  
Insert: VBMT 160408 NLB (T1500A)  
Cutting Conditions:  $v_c = 240$  m/min,  $f = 0,25-0,28$  mm/rev,  $a_p = 0,6$  mm, wet

# Chipbreaker for Steel Turning (M)NSI Type

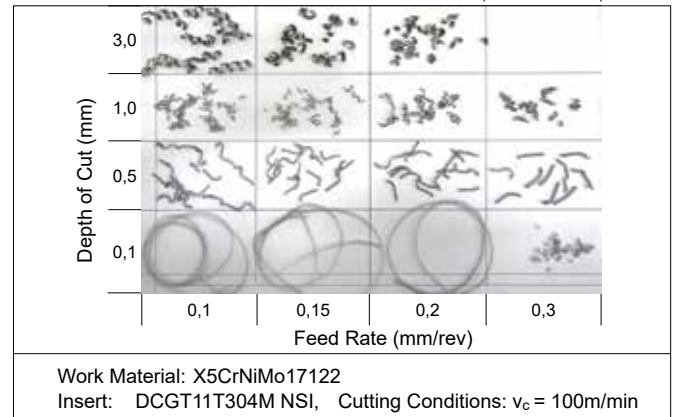

Nose radius with minus tolerance (M)

Example: DCGT 11T304M NSI

## Application Range

## Cutting Performance

## Application Examples

Inconel 718, machine component external turning

Output: NSI (AC510U) 150 pcs, Competitor's Product 100 pcs

1,5 x higher tool life. Improved chip management.

Insert: DCGT11T302M NSI (AC510U)  
Cutting Conditions:  $v_c = 35 \text{ m/min}$ ,  $f = 0,08 \text{ mm/rev}$ ,  $a_p = 0,8 \text{ mm}$ , wet

X5CrNi1810, Shaft component external turning & facing

Improved chip management. Suppressing cutting edge adhesion to ensure a stable, long tool life.

Insert: DCGT11T304M NSI (AC520U)  
Cutting Conditions:  $v_c = 100 \text{ m/min}$ ,  $f = 0,08 \text{ mm/rev}$ ,  $a_p = 0,5 \text{ mm}$ , wet

- Sharp designed cutting edge with low-cutting force
- Better chip control in wide range DOC for bar feeder machine
- Combination of high rake edge design and G-class precision offers superior cutting performance
- Suitable for medical parts and high precision machining

# SumiTurn T-REX Tool Holders

RIGIDITY - ECONOMY - PRECISION

External Holders  
for neg. Inserts

- T-REX clamping for maximum rigidity 50 % more cutting edges than a DNMG Insert

## Advantages

- T-REX Inserts for Maximum Economy  
With 6 cutting edges and a 55 degree included angle - T-Rex is the intelligent alternative to profile turning with a traditional 4 edge DNMG insert.
- Biting Performance from T-REX Teeth  
The double clamp tool holder and powerful teeth of T-REX lock the insert to eliminate movement, dramatically improving tool life, machining accuracy, and cutting edge security.

## Application Range

## Application Examples

## Recommendations

### Depth of Cut

Max.  $a_p = 2,5$  mm

### Approach Angle

(\*) Angle of major cutting edge

C-Type: 95,5°  
Q-Type: 107,5°

### Insert Clamping

Recommended Tightening Torque (N·m)

- = Euro stock
- = Japan stock

# External Tool Holders D Type (Double Clamp)

## Tool Holders for neg. Inserts CN

### ■ Characteristics

Insert is clamping firmly for improved fracture resistance.  
High indexing accuracy improves machining accuracy.  
Insert can be changed from below the holder.  
Suitable for high efficiency machining and interrupted cutting in hardened steel.

### ■ Clamp Mechanism

Secured in two directions and supported by two faces.

Insert can be changed from below the holder.

### ■ Index Accuracy Comparison (Length Wise)

#### D Type Tool Holders

#### Lever Lock

# External Mini Holders

External Holders  
for pos. Inserts

## Back-Turning Tool Holder SBT Type

Sharp cutting edges with good surface finish.  
Max. reach of insert 8,0 mm, edge width 2,5 mm

## Cut-off Tool Holder SCT Type

Easy insert change by just loosening the screw  
from the back.

Max. cut-off dia.  $\varnothing$  5 mm,  $\varnothing$  12 mm,  $\varnothing$  16 mm

PDJCR type  
lever lock holder

Wear-resistant tool materials;  
**T1500A** (Cermet) and  
**AC530U** (2000 layers  
coated carbide grade)

Sharp cutting edge  
( RE = 0,03  
0,1 and 0,2 mm )

Lever lock clamping  
for 7° positive inserts

Easy access  
side locking screw

# External Mini Holders

In 1984, Sumitomo Electric Hardmetal first released the Mini Tool Holder series for the machining of small components in small NC autolathes.

A full range of insert grades comprising of the Cermet T1500A, SUMIBORON BN2000, SUMIDIA DA1000 and especially AC530U, was also introduced to meet a variety of machining requirements.

External Holders  
for pos. Inserts

# External Tool Holders

## Polygon - Shank Holder

### ■ Features

The Sumitomo polygon shank holders enable an extremely high stiffness connection between machine and tool. The conical polygon can take high bending and torque moments based on the combination of the face contact to the spindle.

This self-guiding coupling system offers high precision and a repeatability of  $\pm 2 \mu\text{m}$  in X, Y and Z axis.

While using this easy and quick coupling system it is possible to gain higher machine utilization time as the set-up and tool change times are reduced.

The compact design and the high stiffness connection to the spindle offer a versatile use e.g. on multi-task machines, machining centers and turning-milling centers.

### ■ Characteristics

- original SUMITOMO D-type double clamping system
- compact design
- monoblock system - no additional interfaces
- precise positioning; self-guiding with high repeatability
- high stiffness supported by face contact of holder
- carbide shims to prevent holders from damage
- simple tool holder change and low-maintenance operation
- internal coolant supply directly to the cutting edge
- Polygon shank and insert seat hardened for long holder life

Polygon - shank holder - produced according to ISO 26623-1

# Boring Tool Series

## General Features

Since being the first in 1976 to introduce indexable boring bars, Sumitomo Electric has been continuously developing a comprehensive range which includes the SEC-Small Hole boring bar series, high rigidity boring head series, with either steel / carbide shanks, and the latest anti-vibration mechanism - SumiTurn X-Bar series coupled with a wide variety of insert grades and chipbreakers, cover a whole range of process requirements.

## Features

- Wide selection for various boring operations
- Minimum bore diameter from  $\varnothing$  5,5 mm onwards
- New anti-vibration boring bars, SumiTurn X-Bar.
- High rigidity head-design for small boring bars
- Wide selection of grades and chipbreakers available for various processes and work materials

Boring Bars

## Series SumiTurn X Bar

- New negative type "X Bar" with high performance double clamping system

## Application Guide

**SumiTurn X Bar**

**ATTENTION:**

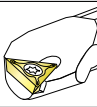

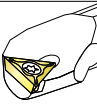

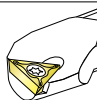

Please keep this area free to get the effect of "X Bar" chattering killer system

Min. over hang length =  $3,5 \times \varnothing d$

■ Advantages

- T-REX Inserts for Maximum Economy

With 6 cutting edges and a 55 degree included angle - T-Rex is the intelligent alternative to profile turning with a traditional 4 edge DNMG insert.

# Solid Carbide Boring Bars BXBR Type

**SumiSmall**

## ■ Characteristics

- Economical, two-cornered insert.
- Maximum boring depth 5D (5 times the shank diameter)
- Usable at any desired overhang.
- Shank size = min. bore diameter for easy selection.  
(Available from  $\phi$  2 mm to  $\phi$  5 mm in 0,5 mm increments.)
- KBMX Type cutting edge used, no breaker versions also available in stock.

## Small Hole Finishing

Figure shows tool with breaker.

# Grooving Tool Holders GND Series

**New**

New series of internal coolant-type holders for small lathes

## ■ Cutting Performance

### Eliminates Vibration

Reduces vibration up to 30 % compared to conventional grades thanks to its high-rigidity design.

Work Material:	15CrMo5
Holder:	GNDL R2525M 220
Insert:	GCM N2002 GG
Cutting Conditions:	$v_c = 100$ m/min, $f = 0,10$ mm/rev, $a_p = 20$ mm, wet

## ■ Characteristics

- Wide range of application processes  
Applicable for grooving, turning, copying, facing, boring and cut-off.
- Achieving stable tool life  
An array of chipbreakers improves the efficiency in chip control in various applications and prevents unexpected damages caused by chip blockade.
- Achieving smooth cutting and high efficiency machining  
Holders utilizing one-piece body construction made of special steel, reduce vibration by 30 % during machining as compared to conventional types.
- Achieving high precision grooving widths with moulded inserts  
Grooving insert width tolerance of  $\pm 0,03$  mm over the entire range

### Ensures both, high rigidity and good chip evacuation

#### Internal

Work Material:	15CrMo5
Holder:	GNDI R2532 T306
Insert:	GCM N3002 GG
Cutting Conditions:	$v_c = 100$ m/min, $f = 0,05$ mm/rev, $a_p = 3,0$ mm, wet

## ■ Application Examples

### Substantially improved machining efficiency!

High rigidity holder enables high load machining at high feed rate.

Work Material:	42CrMo4
Holder:	GNDL R2525M 320
Insert:	GCM N3002 GG (AC530U)
Cutting Conditions:	$v_c = 130$ m/min, $f = 0,30$ mm/rev, wet

### Stable and long tool life ensures reliable functionality even on automatic production lines!

Reduction of chattering prevents unexpected breakage.

Work Material:	C53
Holder:	GNDM L2525M 618
Insert:	GCM N6030 RG (AC530U)
Cutting Conditions:	$v_c = 130$ m/min, $f = 0,30$ mm/rev, wet

# Grooving Tool Holders GND Series

## Internal Coolant Grooving Tool Holder GNDM-J(E) / GNDL-J(E) Type and Grade-Expansion

**New** **Expansion**

- Newly developed 2-hole coolant design optimizes cooling of the insert and improves chip removal, extending tool life and allowing for improved speeds and feeds in production.
- Grooving width range from 2,0 to 6,0 mm
- Introducing new holders for small lathes with grooving width of 2,0 to 3,0 mm
- Achieves both high efficiency in high speed machining and extension of tool life due to internal coolant supply to the cutting edge.
- Improves chip control by applying direct coolant from cutting edge side.
- 4 more grades **AC8025P**, **AC8035P**, **AC5015S** and **AC5025S** available.
- The new grades expand the application in steel materials in direction of high speed with the grade **AC8025P** and for more toughness with the grade **AC8035P**.
- In the area for machining heat-resistance alloys and exotic alloys as Inconel and Hastelloy, we recommend the grade **AC5025S** as the first choice and the grade **AC5015S** for high-speed machining in continues cut.

## Wear Resistance

Upper coolant hole improves chip control.

Lower coolant hole improves wear resistance.

## Chip Control

Coolant Pressure: 7 MPA

Coolant Pressure: 1 MPA

External Coolant

Work Material:	Ti-6Al-4V
Holder:	GNDM R2525K 312JE
Insert:	GCM N3002 GG (AC530U)
Cutting Conditions:	$v_c = 60$ m/min, $f = 0,1$ mm/rev, $a_p = 5,0$ mm, wet

## CF Type Chipbreaker for Cut-Off

- Lead angle of  $10^\circ/15^\circ$  for improved sharpness in cut-off machining.
- Asymmetrical chipbreaker design provides excellent chip control even in difficult to machine conditions.

GCMN20003 CF 10

GCMN20003 CF 15

Competitor

Work Material:	St42-3
Holder:	GNDM R2525M 220
Insert:	GCM N3002 CF-10, 15 (AC1030U)
Cutting Conditions:	$n = 2000$ min <sup>-1</sup> , $f = 0,08$ mm/rev, wet

# Grooving Tool Holders

## GND Series

### ■ Inserts - Chipbreaker Series

Achieving stability and longer tool life. A variety of chipbreakers ensures outstanding chip control performance in many different types of applications.

12	12,0		
12,5	12,5		
14	14,0		
16	16,0		
18	18,0		

To ensure maximum rigidity, use the multi-purpose type holder to machine the maximum grooving depth.

## Identification Details – Inserts

**G C M N 30 02 (S) - G G - (05)**

# Grooving Tool Holders GND Series

## Key Points for Face Machining

### Holder Selection

### Precautions for Groove Expansion

Recommended Chipbreaker: **MG, ML, GG, GL, GF**

### Precautions for Turning

Recommended Chipbreaker:

**MG, ML**

Considering the rigidity of the holder, we recommend machining from the outside to the inside.

- If the first groove meets the range of the effective grooving diameter in face turning, the grooving diameter will not be limited for the second and later passes.
- Select the chipbreaker of the lower limit side of the recommended cutting conditions and straight chips before evacuation. (In face grooving, broken chips easily get stuck in grooves, which causes problems.)
- When breaking chips, step feed is required.

## Key Points for Internal Machining

### Precautions for Internal Machining

Recommended Chipbreaker:

**ML, GL**

If the prepared hole diameter is small, use an ML or GL low-feed chipbreaker, each of which reduces chip curl diameter, to ensure adequate chip evacuation.

Work Material: 15CrMo5 (Ø 25 mm)  
Holder: GNDI R2532 T306  
Insert: GCM N300 □-□  
Cutting Conditions:  $v_c=100$  m/min,  $f=0,10$  mm/rev,  $a_p=3,0$  mm, wet

**!** Chip shapes differ between internal and external machining even under the same cutting conditions.

Work Material: 15CrMo5  
Holder: GNDL R2525M 320  
Insert: GCM N3002 GG  
Cutting Conditions:  $v_c=100$  m/min,  $f=0,10$  mm/rev,  $a_p=5$  mm, wet

# Grooving Tool Holders GND Series

## Precautions for Grooving Tool Holders GND Series

### Notes on how to Attach Inserts

- Remove any foreign particles or oil from the insert seat before attaching the insert.
- Ensure the seat location is clean and free of damage.
- Slide the insert level over its seat.
- Push the insert with its opposite end (the holder side) firmly against the insert stop end.
- The recommended tightening torque is 5 N.m. Tightening above the recommended torque may damage the insert or the holder which could cause injury and other accidents.

③ Attach insert on the seat flat.

④ Push insert fully into place.

### Notes on how to Apply Holders

- Remove any foreign particles or oil from the tool post before attaching the holder.
- Ensure the seat location is clean and free of damage.
- Attach the holder so that the insert is perpendicular to the workpiece.
- Set holder with shortest possible overhang.
- When grooving or turning, adjust the center height of the cutting edge to as close  $\pm 0$  mm as possible. (Within  $\pm 0,1$  mm is recommended)
- Incorrect center height adjustment may cause chattering. (In cut-off applications, adjust the center height of the cutting edge to a value from 0,0 to +0,2 mm). A lower center height will result in larger nip at the center.

③ Attach at right angle to workpiece.

④ Set with short overhang

⑥ Center height adjustment in cut-off applications

### Notes on Setting Coolant Supply Nozzle

Set the coolant supply nozzle so that coolant can be supplied from the top of the upper clamp unit.

### Maximum Depth of Cut

Maximum depth of cut when pulling up with RG chipbreaker

Grooving Width (mm)	Max. Depth of Cut (mm)
CW	E1
3,0	0,15
4,0	0,20
5,0	0,25
6,0	0,30
7,0	0,35
8,0	0,40

## Key Points of Internal Coolant-Type Holders for Small Lathes

The insert for internal coolant-type 12 mm and 16 mm holders for small lathes can be replaced from either the top or bottom.

## Key Points for Connecting Hoses and Connectors

### ■ Connecting Hoses and Connectors

GNDM-JE (European standard)

Apply sealant such as commercial sealing tape to the piping connection parts.  
GNDM-JE type holders have a plug (XP02-E) mounted on the holder back end at shipping. (see fig. 1)  
When piping from the holder back end, mount a grub screw (BT0505-E) on the bottom of the holder for use. (see fig. 2)

Fig. 1 Piping from bottom

Fig. 2 Piping from back end

### ■ Connecting Hoses and Connectors (for Small Lathes)

GNDM-J (Japanese standard)

Apply sealant such as commercial sealing tape to the piping connection parts.  
Refer to the figur below for mounting the plug during piping.

Piping from side (when shipped)

Piping from rear

Hoseless coolant support products (when shipped)

\* The plug will protrude a few millimeters when mounted to the side.

\* 1 The plug will protrude a few millimeters when mounted to the side.  
\* 2 A plug is attached when shipped. Remove this plug before supplying coolant without a hose.

### Holder with Hoseless Coolant Support

Direct coolant supply from the tool post is possible without a hose

#### Connector for Hoseless Coolant Supply

Remove the plug before supplying coolant without a hose.

# Grooving Tool Holders GNDFS Type

## Face Grooving L-Styled (Non-Adjustable Type)

Use the multi-purpose copying inserts for turning (wide grooves).

Above figures show right hand tools.

# Grooving Tool Holders

## SSH Series

**New**

### ■ Features

Tough carbide body for stable machining.  
 Internal coolant supply for outstanding chip evacuation.  
 Adopts AC1030U for excellent machined surface quality.  
 In addition to grooving applications, we have a lineup of 12 items for circlip groove machining.

### ■ Application Range

Width of Cut: 0,74 mm – 3,00 mm  
 Min. Bore Diameter: Ø 8,0 mm  
 Max. Groove Depth: to 4,0 mm  
 Holder: Carbide body (internal coolant supply)  
 Insert: Grade AC1030U

Grooving & Parting-Off

### ■ Chip Control

**SSH Series**

Stable and smooth evacuation of curled chips even on small diameters.

Easy chip removal

**Competitor**

Evacuation from grooves is poor, inviting sudden breakage.

No chip evacuation space

Work Material: C45      Cutting Conditions:  $v_c = 50$  m/min,  $f = 0,02$  mm/rev,  $a_p = 1,0$  mm, wet (oil-based)  
 Cutting Diameter: Ø 13 mm

### ■ Chatter Resistance

**SSH Series**

No chattering  
 Outstanding sharpness and carbide shank suppress chatter.

**Competitor**

Occurrence of chattering

Work Material: C45      Cutting Conditions:  $v_c = 100$  m/min,  $f = 0,01, 0,02, 0,03$  mm/rev,  $a_p = 0,2$  mm, wet (oil-based)  
 Cutting Diameter: Ø 13 mm

### ■ Machined Surface Quality

**SSH Series**

Excellent surface quality due to improved friction coefficient.

**Competitor**

Matt surface

Work Material: 42CrMo4      Cutting Conditions:  $v_c = 180$  m/min,  $f = 0,02$  mm/rev,  $a_p = 0,2$  mm, wet (oil-based)  
 Cutting Diameter: Ø 30 mm

# ISO-PSC Polygon Modular GND Grooving System

## General Features

New grades and chipbreakers have been added to the already established GND grooving system with polygon shank and a flexible and economical cassette system for inserts. An array of chipbreakers improves the efficiency in chip control in various applications such as grooving, turning, profiling and cut-off.

## Advantages

- GND inserts for soft grooving from 2,0 - 6,0 mm width
- Expanded grade selection with 9 different chipbreakers for a wide application range
- Provides excellent chip control
- Achieves stable long tool life

## Cassette

# SumiTurn B-Groove Insert TGA-BF Type

## Characteristics

- Outstanding chip control when grooving
- Excellent chip control when finishing wide grooves using axial feed
- Grooving inserts from 1,5–4,5 mm wide
- Grade AC530U with Super ZX ultra hard coating for steels, stainless steels and cast iron increases productivity and extends tool life

## External Grooving

Figures show right hand tools.

The rake angle R varies depending on the insert grade. For details, see the table at the lower part of page F47.

Notice: Please note the cutting edge position E2, for grooving widths below 1,85 mm..

(Note 2) Figures show right hand tools.

#### Recommended Cutting Conditions

##### Grooving

Wet condition is recommended.

Work Material	General Steel	Stainless Steel
Cutting speed (m/min)	50-180	50-160
Groove width (mm)	1,5-2,3	2,5-3,3
Feed rate (mm/rev)	0,03-0,12	0,04-0,12
Depth of cut (mm)	Ext.	-3,5
	Int.	-2,5

##### Axial Feed

Feed direction for axial feed

Wet condition is recommended.

Work Material	General Steel	Stainless Steel
Cutting speed (m/min)	50-180	50-160
Feed rate (mm/rev)	0,03-0,10	0,05-0,10
Depth of cut (mm)	-0,3	-0,5

#### Rake Angle with a Holder Fitted (E)

Grooving	AC530U	H1	T2500Z T3000Z	T1500A	BN2000	DA2200
External GWC, GWCS	10°	20°	10°	5°	0°	10°
Internal GWCI	1°	11°	1°	-4°	-9°	1°

\*) Please select applicable inserts for the holders by using matching group numbers.

## Notes for Machining an Insert

Make the cutting edge so that the rake angle, back taper, etc. as shown in fig. 3. When you have installed an insert into a holder, it becomes a cutting blade element as shown in fig. 4.

Suggested Shape

Fig. 3

Cutting blade element during holder installation

# Parting-Off Holders Sumi-Grip

## ■ Characteristics

- Holders available in carbide (SumiGrip) and steel (SumiGrip JR).
- Capable on interrupted machining.
- Can be used for cut-off, grooving and chamfering applications.

## ■ Type

- Tool block type  
STFH (steel) / WCFH (carbide)
- Shank type  
STFS (steel) / WCFS (carbide)

## ■ Cut-Off

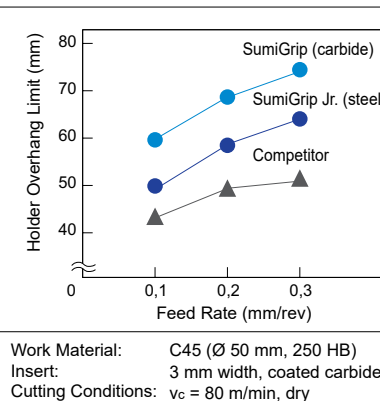

## ■ Features of Design

## ■ Twice the Insert Holding Force

## ■ Low Vibration

## ■ Wear Resistance

## ■ GG Type/GF Type/CF Type Chipbreaker, Grade AC1030U

Utilizing grooving tool GND type chipbreaker series for excellent chip control.

Low cutting force chipbreaker GF type (neutral) or CF type (left or right handed) inserts, coupled with a carbide blade, enables stable machining and prevents chattering even when machining stainless steel.

Achieving stable and longer tool life with the new AC1030U grade.

GG	GF	CF
Neutral	Neutral	L/R handed
General purpose	Exotic alloy, Low cutting force	Exotic alloy, Low cutting force

## ■ Performance (Chipbreaker)

# Threading Tools

## SSTE / SSTI Type

### ■ Features

- High-precision inserts with/without wiper flat for threading, supporting a wide range of applications from general industrial machinery to pipes and aerospace devices
- Stable chip control through use of a 3D molded chipbreaker.
- Ground cutting edge flank for improved cutting edge sharpness, resulting in high quality threads

Ground flanks around cutting edge

## SSTE / SSTI Type

### Shim Selection

If the pitch is large or thread diameter is small, the lead angle of the thread becomes larger and the effective relief angle of the leading edge becomes smaller. It is ideal to set the threading insert so that both right and left relief angles are equal.

Therefore, it is necessary to select an appropriate shim based on the thread pitch and effective diameter using the table below.

### Shim Selection Procedure

- (1) Choose from [Right-Hand Thread / Left-Hand Thread] in the table.
- (2) Locate the required threading „pitch“.
- (3) Locate the cell with the required „Effective Diameter“ range.
- (4) Confirm the part no. at the „Shim“ row above the corresponding „Effective Diameter“ cell located previously. If the shim part no. is different from the one currently in use, change to the correct one.

Example: When machining an M16×2,0 external right-hand thread, the pitch diameter is 14.701 mm. In the table below, locate [2,0] mm under the "Pitch" column and then move along the row to the right to locate the required "Effective Diameter" range [11,4 - 17,4] mm. As such, the correct shim should be [YE3-1P], shown in the corresponding cell under the "Internal" row below.

### Pitch (mm)

\* SSTE Type/SSTI Type holders are shipped with shims for a lead angle of  $Y_1 = 1,5^\circ$  (SSTE Type: **YE3**, SSTI Type: **YI3**).

Shims for lead angles of  $Y_1 = -1,5^\circ, -0,5^\circ, 0,5^\circ, 2,5^\circ, 3,5^\circ$ , and  $4,5^\circ$  are sold separately.

\* Shims are not needed for SSTI R1812M16 and SSTI R2016M16. (The holders are already provided with the standard holder inclination of  $1,5^\circ$ .)

<ul style="list-style-type: none"> <li>• Performs threading without machining thread ridges (the machined surface from the previous process is left unworked.)</li> <li>• Enables machining of threads with different pitch widths with the same insert</li> <li>• Finishing of the internal (or external) diameter is required before the threading process.</li> <li>• Fine burrs are easily formed on edges of ridges.</li> </ul>	<ul style="list-style-type: none"> <li>• Enables machining of workpieces into shapes compliant with thread standards</li> <li>• Only specific thread specifications and pitch can be machined</li> <li>• In order to finish a thread with the wiper flat, a finishing allowance of 0,1 mm on each side is required.</li> <li>• Edges of ridges can be rounded off.</li> </ul>

### Infeed Method

The modified flank infeed is recommended for the SSTE type/SSTI type.

This infeed method, which features reduced chip curl diameters and stable chip control, can also decrease chipping on trailing edges that often occurs in radial infeed machining. (1° is recommended for the modification angle.)

<p>Work Material: X5CrMo17-12-2, M30 x 1,5 Cutting Conditions: <math>v_c = 60</math> mm/min, wet, 8 Passes</p>	
<h4>Modified Flank Infeed</h4> <p>Leading Edge</p> <p>Trailing Edge</p> <p>Feed Direction</p> <p>50 mm</p> <p>Reduced curl diameters ensure smooth, stable chip control (performance)</p>	<h4>Radial Infeed Machining</h4> <p>Feed Direction</p> <p>50 mm</p> <p>Large curl diameters cause unstable chip control.</p>

# "Sumi Dual Mill" DGC (M/F) Type

Expansion

## General Features

Sumi Dual Mill DGC type utilizes double-sided inserts for excellent economy. This is a general-purpose cutter featuring high cutting edge strength for high efficiency milling and low-burr chipbreaker design that provides high quality machined surface.

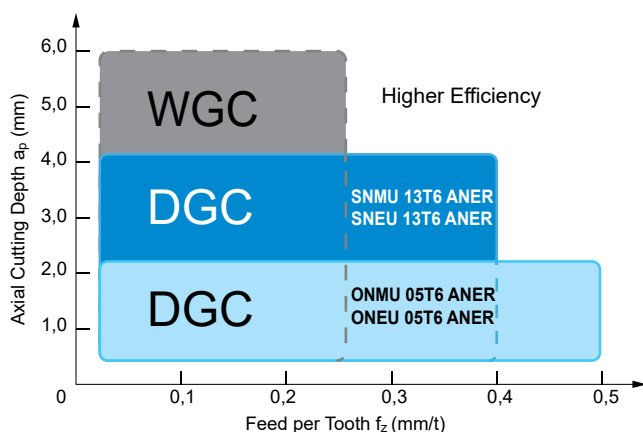

The DGC type insert lineup includes double-sided SNMU / SNEU and ONMU / ONEU types. Up to 16 corners can be used for improved economy.

## Characteristics

- Same cutting performance as single-sided inserts plus superior economy.
- Achieves level of cutting edge sharpness and machined surface quality equivalent to single-sided cutter at a maximum cutting depth of  $a_p \leq 3$  mm.

## Recommended Cutting Conditions for General Steel Milling

## Cutting Force Comparison

## Dual-Purpose Body

Two types of inserts can be used with a single body depending on milling application to help reduce costs. Stronger than single-sided cutters.

- first recommendation
- economical double-sided design offers 8 cutting edges with SN\_U inserts
- maximum depth of cut:  $a_p = 6$  mm

max.  $a_p = 6$  mm  
8 corners use

Use two types of inserts for different applications.

max.  $a_p = 3$  mm  
16 corners use

- double-sided design with 16 corners for improved economy
- maximum depth of cut:  $a_p = 3$  mm

# "Sumi Dual Mill" DGC (M/F) Type

## Line-up

Choose a tool that fits your application from a comprehensive line-up

Cat. No	DGC 13000 RS	DGCM 13000 RS	DGCF 13000 RS	DGC 13000 EW
Type	Standard pitch	Medium pitch	Fine pitch	Endmill type
Cutter Diameter	Ø 40 mm – Ø 250 mm	Ø 50 mm – Ø 250 mm	Ø 50 mm – Ø 250 mm	Ø 40 mm – Ø 63 mm
Cutting Edges	3–10	4–14	5–18	3–4
Shape				 → H6

## High Reliability

Employs New Super ZX Coating, a multi-layer PVD coating grade and CVD coating grade with enhanced coating strength provided by newly developed stress control technology. Improved run-out precision reduces tool life deviation to achieve highly reliable tool life.

## Multi-layer PVD Coating

## Wear Resistance

## Cutter Diameter and Cutter Body Height

Insert: SN\_U 13T6 ANER (square)

Insert: ON\_U 05T6 ANER (octagonal)

Example: DC = 100mm	Number of Cutting Edges	Tool Diameter (mm)	Cutter Height (mm)	Max. Depth of Cut (mm)
SNMU/SNEU 	8	100,0	63,0	6,0
ONMU/ONEU 	16	102,9	61,4	3,0

Square inserts (SNMU/SNEU) and octagonal inserts (ONMU/ONEU) can be used interchangeably on the same body. Using these inserts the cutter will have different cutter diameter and cutter body height.

## Chipbreaker

### ● Improved Milling Quality

FG type chipbreakers feature chamfer to minimize burrs and provide excellent milling quality.

FG type inserts with low-burr design enable high-quality milling with few burrs and little edge chipping.

### ● Attaching Inserts

### Octagonal Inserts

Firmly align insert with supporting face, press down in the direction of the arrow and tighten the screw to fix the insert.

Press down firmly from above

## Spare Parts

Shim	Shim Screw	L Seat Wrench	Insert Screw	Insert Wrench
DGCS13R	BW0609F	LH040	BFTX0412IP 3.0mm	TRDR15IP

### Optional

Insert Screw (*)
BFTX0418IP

\*Corners can be changed simply by loosening the screw. (Only suitable for DGC/DGCM types with body size ≥ Ø 80 mm).

# "Wave Face Mill" WGX (M/F) Type

## General Features

The Wavemill WGX Type employs unique chipbreaker design to provide lower cutting resistance and higher quality surface finishes than conventional tools.

## Series

Type	Cat. No.	Cutter	No. of Teeth
Standard Pitch	WGX 13000RS	Ø 40 – Ø 250	3–10
Medium Pitch	WGXM 13000RS	Ø 50 – Ø 250	4–14
Fine Pitch	WGXF 13000RS	Ø 50 – Ø 250	5–24
Endmill Type	WGX 13000EW	Ø 32 – Ø 63	3–5

Inner coolant available for DC ≤ Ø 125 mm

## Characteristics

- **Stable Cutting**  
Special chipbreaker designed for WGX enables lower cutting forces. → H7
- **High Quality**  
Improved run-out precision and unique wiper edge shape ensure excellent surface finish quality. Optimised chamfer edge reduces burr and edge chipping.
- **Long Tool Life**  
Features high precision technology that reduces insert run-out variation and a new coating to provide stable and long tool life.

## Insert Shape Characteristics

Unique wiper edge shape for improved surface roughness

## Structure

# Face Mill UFO / UFOF Type

## ■ Features

- 45° approach face mills
- 27° super high rake multi purpose cutter for outstanding productivity milling steels, irons and alloys
- Substantially improves metal removal rates on low powered machines
- Differential pitched inserts guarantee smooth cutting action
- Rigid body incorporates carbide locators and HSS shims resulting in extremely low run out

# "Wave Radius Mill" WRCX Type

## ■ Features

The "Wave Mill" WRCX type is a new multi purpose milling cutter for face milling, slotting, helical boring, plunging and profiling. Its unique design features 16 corner polygon inserts and a durable cutter body manufactured from high tensile alloyed steel protected by a hard surface treatment. Insert rigidity is maximised via close tolerance seat pockets and centre clamped using a torxscrew. Choose from a variety of insert grades such as our award winning Diamond like Carbon DL 1000 capable of high feed machining aluminium, our uncoated H1 grade suitable for non-ferrous metals or our new ACP/ACK grades for steels and irons.

## ■ Advantages

- Durable cutter body – Special alloyed steel with hard surface.
- High feed cutting – Optimised pitch and high number of cutting edges
- Excellent chip removal – Wide pocket and integral coolant hole
- Maximum rigidity – Rigid clamping of inserts with TORXPLUS screw
- Wide application range – Carbon steels, alloy steels, stainless steels, high temperature alloys, die/mould steels, aluminiums, non-ferrous metals etc

# "Wave Radius Mill"

## RSX Series

### ■ Features

The Wave Radius Mill RSX Series enables stable machining even when using equipment with low clamp rigidity thanks to its body design achieving excellent cutting performance and rigidity.

In addition to the ACM Series for stainless steel and exotic alloys two grades have been added: ACP200 grade for steel machining and ACK300 grade for cast iron machining. Handle an even wider range of milling needs with the RSX(F)08000 and RSX(F)20000 types.

### ■ Characteristics

Smooth cutting action and low vibration machining provided based on the high rake angle design and high rigidity body.

High reliability achieved with ACM100/ACM200/ACM300 adopted for exotic alloy machining.

ACP200 for steel and ACK300 for cast iron enable stable machining in a wide range of applications.

### ■ Cutting Performance

#### ● Tool Life Comparison (Fracture Resistance)

#### ● Cutting Vibration Comparison

#### ● Cutting Resistance Comparison

# "Wave Radius Mill" RSX Series

## Low Cutting Resistance, Less Vibration

Low cutting resistance and low vibration machining have been achieved with super high rake angle design + high rigidity body.

## High Operability

Ease of corner control has been achieved with the adoption of a unique positioning mechanism that is highly precise and highly operable.

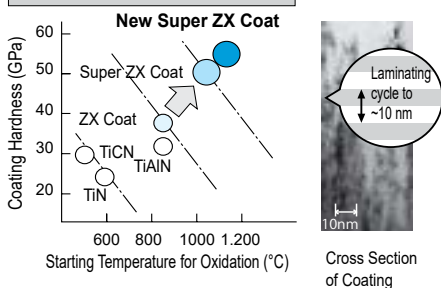

## Stable and Long Tool Life

Work Material	Wear Resistance	Fracture Resistance
<b>P</b>	ACP200	
<b>M</b>	ACM100	ACM200
	ACM300	
	ACK300	
<b>K</b>	ACK300	
	ACM100	ACM200
	ACM300	
<b>S</b>	ACM300	

Coating Type: ▽ CVD ▲ PVD

A long life ensured with the adoption of the ACM series and significant improvements have been made in processing exotic alloy and stainless steel machining.

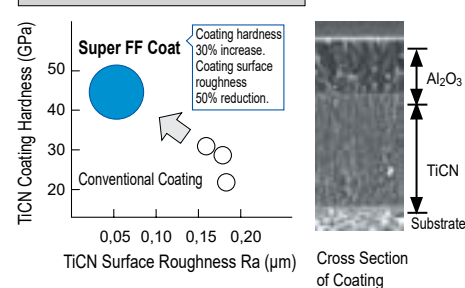

### ▲ ACM100/ACM300

### New Super ZX Coat

The product series with a coating film hardness approximately 40 % higher and an oxidation onset temperature 200 °C higher than conventional products. Enables machining at least 1,5 times faster and more efficiently than conventional products. A product life at least twice as long as that of conventional products achieved under the same machining conditions.

### ▽ ACM200

### Super FF Coat

Smooth coating surface provides excellent adhesion and chipping resistance. Improved coating adhesion strength. Harder than conventional coatings with high improvements in wear resistance. High speed, high efficiency machining of more than 1,5 times than of conventional grades possible. Achieving more than double the tool life of conventional grades under the same cutting conditions.

# "Sumi Dual Mill"

## DFC Type

Expansion

### General Features

The Sumi Dual Mill DFC type employs cost effective double-sided inserts for high toughness and enhanced accuracy. The double-side inserts are flexible and reduces costs.

### Large Line-up

- Diameter from Ø 25 mm to Ø 200 mm
- Available as standard, fine and extra-fine pitch
- Bore diameter: metric
- Insert geometry: L, G, GS, H

### Cutter Body

Type		Cat. No.	Diameter (mm)	No. of Teeth	Image
Shank	Standard Pitch	DFC 09000 E	Ø 25–Ø 80	2–5	
	Medium Pitch → H17	DFCM 09000 E	Ø 32–Ø 80	3–7	
Shell	Standard Pitch	DCF 09000 RS	Ø 50–Ø 200	4–10	
	Medium Pitch	DFCM 09000 RS	Ø 50–Ø 200	5–16	
	Fine Pitch	DFCF 09000 RS	Ø 50–Ø 200	6–20	

### 90 Degree Accuracy

Work material: Carbon steel

Cutting conditions:  
 $v_c = 200 \text{ m/min}$ ,  $f_z = 0,1 \text{ mm/t}$   
 $a_e = 5,0 \text{ mm}$ ,  $a_p = 5,0 \text{ mm} \times 3 \text{ passes}$

### Applications and Recommended Chipbreakers

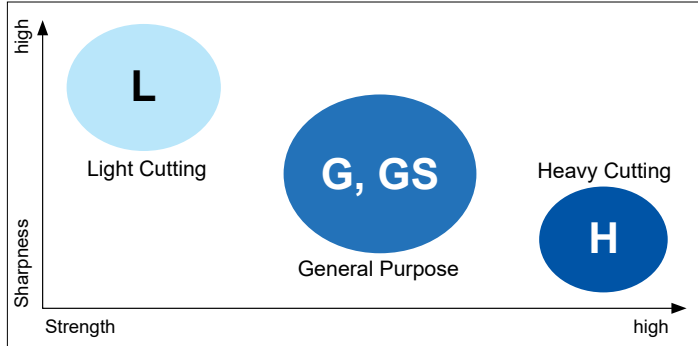

● = Euro stock

# "Sumi Dual Mill" DFC Type

## ■ New Insert Design Provides Excellent Machining Accuracy

- The new insert design separates the location area and cutting edge producing an optimized solution.
- Machining accuracy is comparable to single sided inserts provided the DOC is less than 3 mm.
- The SEC-Sumi Dual Mill design, equips the user with a highly stable cutter for high feed machining applications.

## ● Chipbreaker Selection Map

Cutting edge geometry				
Features	Low rigidity milling, reduction of burrs	Face milling	Shoulder milling	Roughing, heavy interrupted and hardness steel milling

## ■ Stable and High Cutting Performance Combined with High Toughness

- The excellent cutter performance offers efficient machining, enables high feed rate capability.
- The new insert construction provides extremely accurate edge to edge indexing whilst the location area offers high security and stability.

# "Wave Mill" Series

## WFX Type

Expansion

### General Features

Wave Mill WFX type for shoulder milling is a screw-locking type cutter capable of using four corners. Ideal cutting edge design delivers good squareness. Series expansion with the high-feed **WFXH** type and the **WFXC** type for chamfering. A comprehensive lineup that covers a wide variety of applications.

### Characteristics

The insert shape, optimized for shoulder milling and combined with a high-precision body, leaves a superior machined surface finish.

### Max. Depth of Cut

### Optimized Edge Shape

- ① The convex shape ensures the cutting edge strength.
- ② The flat shape minimises differences in step levels.

- ③ The wiper edge function improves the surface roughness.

### Product Range

Application	Type	Cat. No.	No. of Teeth	Cutter Diameter (mm)	Shape

12 Type Cross Section	0,05 mm 25°	0,1 mm 15°	0,2 mm 15°	0,2 mm 15°	27°
Work Material-Application	Light Cutting Low rigidity Milling Low-Burr Design	<b>Main Chipbreaker</b> General to Interrupted Milling	Heavy Cut Heavy Interrupted Machining Tempered Steel	Precision Finishing	Non-Ferrous Metal

## Wiper Insert

Optimised wiper edge shape provides superior surface roughness.

Wiper inserts are single-cornered. Attach the wiper insert so that the chamfered corner is in location ① shown in the figure. Be sure to use the corner with the ID mark (② in the figure). (08 size inserts have no marks)

Milling Cutters

# "Sumi Dual Mill" Series TSX Type

Expansion

## General Features

High-efficient and high precision tangential shoulder milling cutter with tangentially mounted carbide inserts.

## Characteristics

- **Tough & Sharp cutting edge**  
Tangentially mounted carbide insert design and optimized edge geometry realize extremely tough and sharp cutting action.
- **Very accurate and excellent surface finish**  
Thanks to newly developed fine carbide press / sintering technology and very accurate grinding technics, very periphery ground inserts generate very accurate and excellent surface finish.
- **Wide product range**  
2 different insert size series, 3 chip breaker range and various carbide grade combination offers wide range of machining application.

Slot milling

Recommended  
≤ ø32 mm

Hole expansion milling

# "Sumi Dual Mill" Series TSX Type

## ■ Toughness

TSX type has extremely stable cutting edge.

Cutting Length	4 Passes	8 Passes	12 Passes
TSX	Available		
Competitor A	Breakage		
Competitor B	Breakage		

  

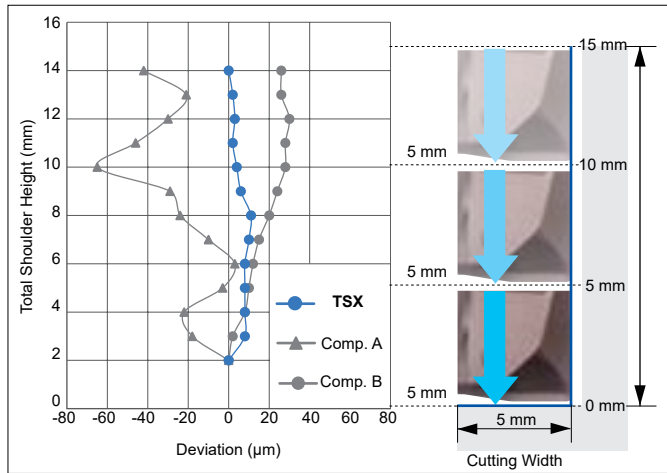

Machine:	M/C BT-50, vertical	Work Material:	C50
Tool:	TSX13100RS	Insert:	LNEX130608PNER-G (ACP200)
Cutting Conditions:			
$v_c = 150$ m/min, $f_z = 0,6$ mm/t, $a_p = 3$ mm, $a_e = 40$ mm, dry			

## ■ Squareness of Machined Shoulder

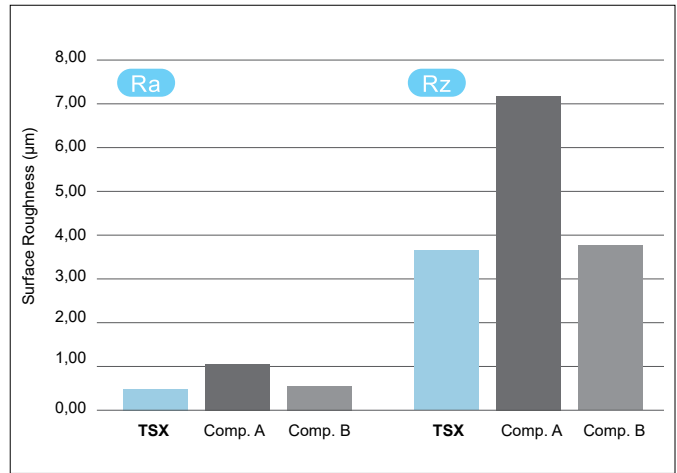

TSX type shows excellent squareness due to ground insert and optimized design.

Machine:	M/C BT-50, vertical	Work Material:	Carbon Steel
Tool:	TSX13100RS	Insert:	LNEX130608PNER-G (ACP200)
Cutting Conditions:			
$v_c = 200$ m/min, $f_z = 0,2$ mm/t, $a_p = 5$ mm x 3 passes, $a_e = 5$ mm, dry			

## ■ Surface Finish

TSX type shows excellent surface roughness.

Machine:	M/C BT-50, vertical	Work Material:	C50
Tool:	TSX13100RS	Insert:	LNEX130608PNER-G (ACP200)
Cutting Conditions:			
$v_c = 200$ m/min, $f_z = 0,2$ mm/t, $a_p = 3$ mm, $a_e = 60$ mm, dry			

## ■ Tool Life

Longer tool life and stability due to superior wear resistance.

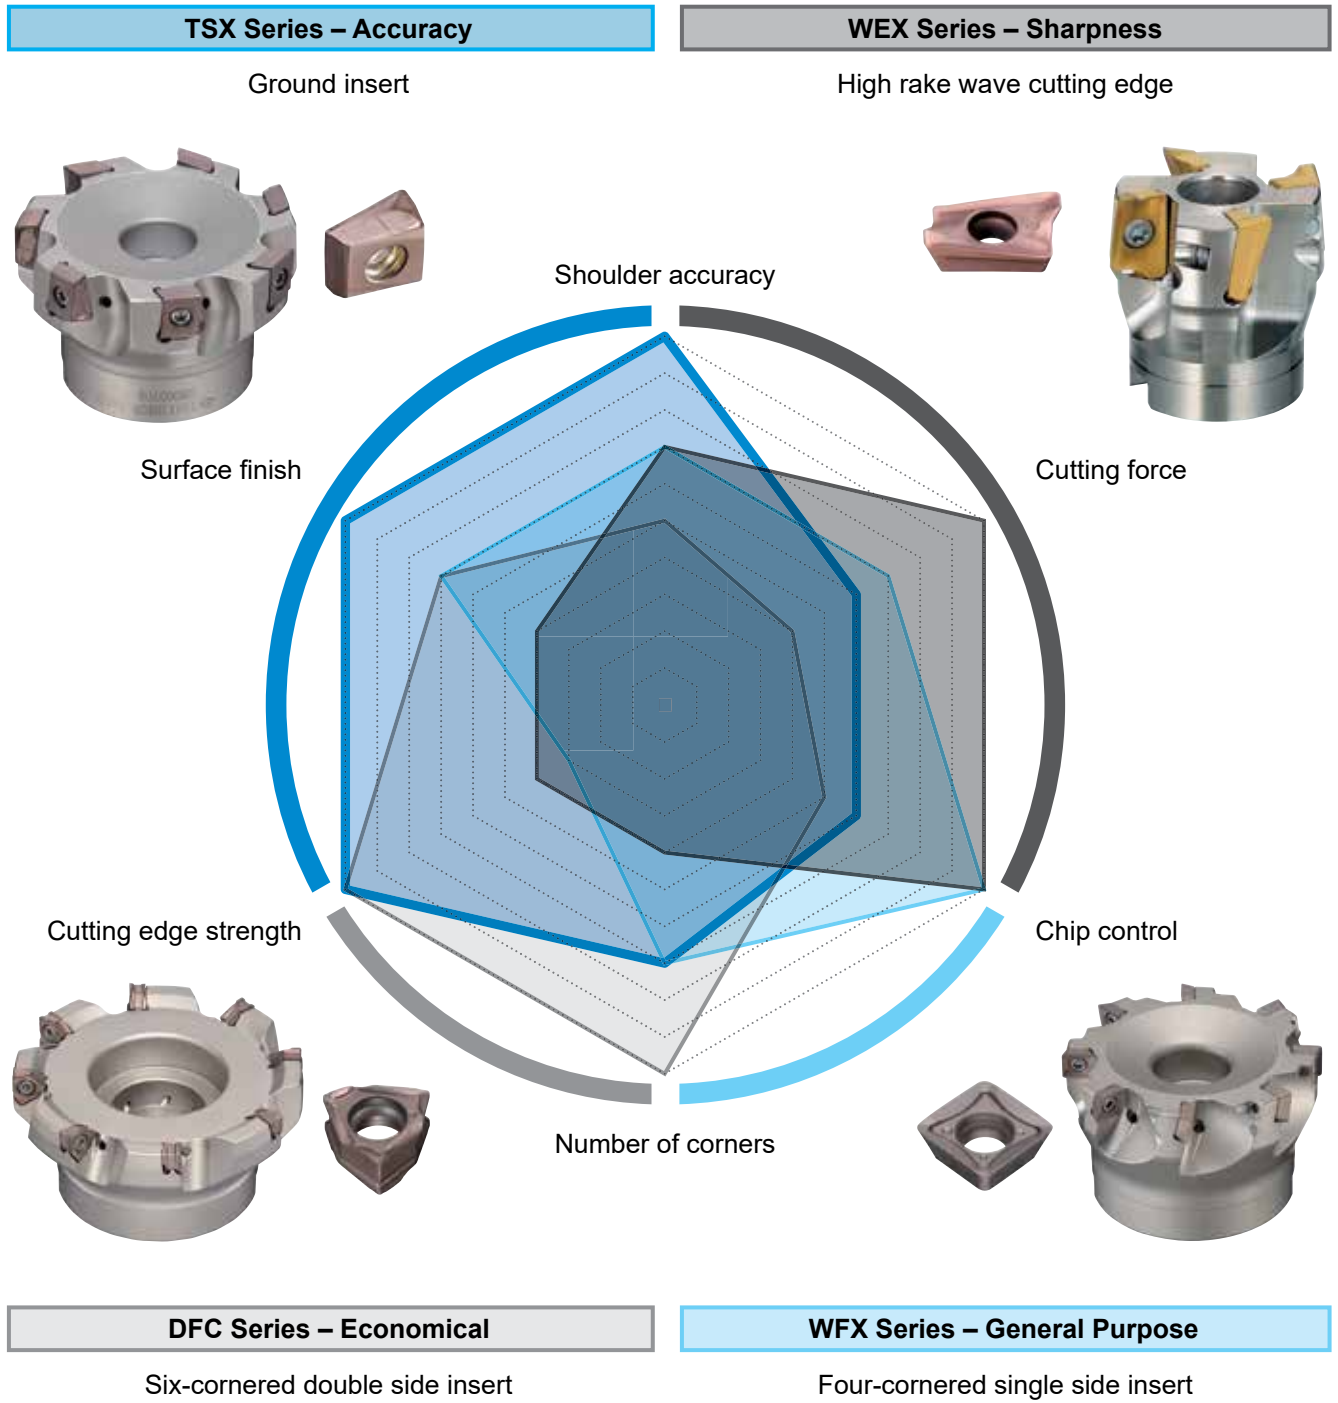

Machine:	M/C BT-50, vertical	Work Material:	C50
Tool:	TSX08025E	Insert:	LNEX080408PNER-G (ACP200)
Cutting Conditions:			
$v_c = 200$ m/min, $f_z = 0,10$ mm/t, $a_p = 2$ mm, $a_e = 5$ mm

# "Wave Mill" Series

## WEZ Type

Expansion

### General Features

- Supports Various Machining Operations  
A lineup of cutter sizes from Ø 14 to Ø 160 mm, which enable large ramping angles, 28 repeater type items are now available in addition to the modular type and short shank type.
- Excellent Machining Quality  
With a combination of optimised cutting edge shape and high-precision molding technology, superb wall surface accuracy and surface finish quality are achieved.
- Excellent Sharpness with Low Resistance  
Reducing machining noise and suppressing burrs, the lineup includes ground type inserts with a focus on sharpness.
- Applicable to Various Work Materials  
In addition to the general-purpose grade ACU2500, the new generation coated carbide grades XCU2500/XCK2000 are available. Applicable to various work materials such as steel, stainless steel, cast iron, exotic alloys and more.

## Improved Milling Quality

### ● Excellent Squareness

Machine: Vertical Machining Centre BT40,  
 Work Material: C50  
 Tool: WEZ 11020 E03 (Ø 20, 3 teeth)  
 Insert: AOMT11T308PEER-G (ACU2500)  
 Cutting Conditions:  $v_c = 150$  m/min,  $f_z = 0,15$  mm/t,  $a_p = 6$  mm x 4 passes,  $a_e = 5$  mm, dry

### ● Excellent Surface Quality

### ● Lower cutting force helps reduce machining noise

Machine: Vertical Machining Centre BT40,  
 Work Material: C50  
 Tool: WEZ 11020 E03 (Ø 20, 3 teeth)  
 Insert: AOMT11T308PEER-G (ACU2500)  
 Cutting Conditions:  $v_c = 150$  m/min,  $f_z = 0,15$  mm/t,  $a_p = 8$  mm,  $a_e = 5$  mm, dry

# "Wave Mill" Series WEZ Type

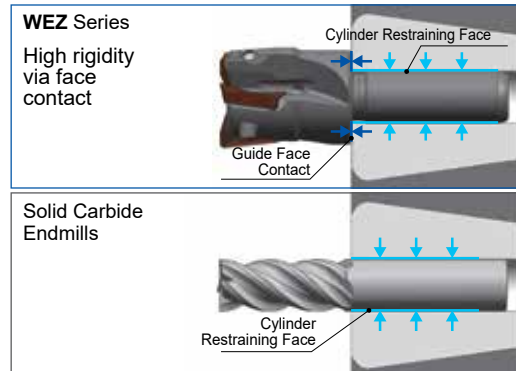

## ■ Features

- Developed for Multi-tasking Machines  
Short shank type ideal for low-rigidity multi-tasking machines
- Superb Machining Quality  
Shank design ideal for ER collets with face contact design that increases rigidity, realizing excellent shoulder accuracy and finished surface quality.
- A Wide Selection of Inserts  
Supports various machining applications with a wide selection of chipbreakers, with sharp cutting edges, different nose radii and dedicated grades for specific work materials.

## ■ Cutting Performance

### ● Excellent Squariness

Machine: Composite NC lathe  
 Work Material: X5CrNiS1810, Ø 16 round bar  
 Tool: WEZ11020ES03-10 (Ø 20, 3 flutes)  
 Insert: AOET11T308PEER-F (ACU2500)  
 Cutting Data:  $v_c = 100$  m/min,  $f_z = 0,08$  mm/t  
 $a_p = 6$  mm x 2 passes,  $a_e = 2$  mm, wet

### ● Excellent Machined Surface Quality

Machine: Composite NC lathe  
 Work Material: X5CrNiS1810, Ø 16 round bar  
 Tool: WEZ11020ES03-10 (Ø 20, 3 flutes)  
 Insert: AOET11T308PEER-F (ACU2500)  
 Cutting Data: **WEZ** type:  $v_c = 100$  m/min,  $f_z = 0,05$  mm/t,  $a_p = 2$  mm,  $a_e = 12$  mm, wet  
 Competitor:  $v_c = 100$  m/min,  $f_z = 0,05$  mm/t,  $a_p = 2$  mm,  $a_e = 6$  mm x 2 passes, wet (solid carbide endmill)

Larger tool diameter than carbide solid endmills enables reduced number of passes for high-efficiency machining.

Good shoulder accuracy and machined surface quality, eliminating the finishing process.

# "Wave Mill" Series

## WEZ Type

### High-precision Ground Class Insert with Excellent Sharpness

Ground Finish on Cutting Edge and Guide Face

The guide face has a ground finish as well as the cutting edge, minimizing corner difference when mounting on the body. Stable runout precision and machining quality.

Cutting edge flank

### Lineup of Chipbreakers for Ground Inserts

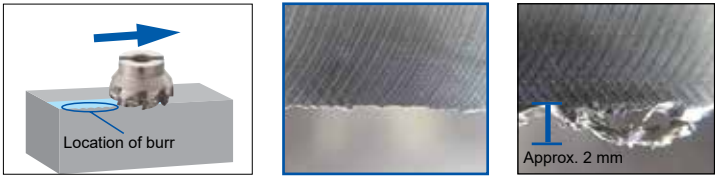

#### F Type

Cutting edge specialized for sharpness and machining accuracy

Sharpness from ground finish enables burr control.

Excellent squareness with all diameters.

Machine: Vertical Machining Centre BT50,  
Work Material: X5CrNiS18 9  
Tool: WEZ 11050 RS07 (Ø 50, 7 teeth)  
Insert: AOET11T308PEER-F (ACU2500)  
Cutting Conditions:  $v_c = 120$  m/min,  $f_z = 0,12$  mm/t,  $a_p = 1$  mm,  $a_e = 30$  mm, dry

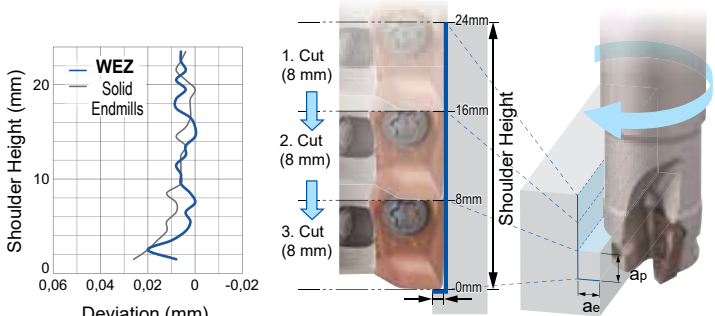

#### P Type

Chipbreaker for wall surface squareness equivalent to solid endmills

Premium item with cutting edge shape optimised for each cutter diameter while maintaining the F type chipbreaker's sharpness.

Enables wall surface squareness equal to solid endmills through a blade shape optimised for each tool diameter.

Machine: Vertical Machining Centre BT50,  
Work Material: C50  
Tool: WEZ 11020 E03 (Ø 20, 3 teeth)  
Insert: AOET11T308PEER-P20 (ACU2500)  
Cutting Conditions:  $v_c = 150$  m/min,  $f_z = 0,1$  mm/t,  $a_p = 8$  mm x 3 passes,  $a_e = 1$  mm, dry

#### P Type Chipbreaker Selection

Cat. No.	Cutter Diameter (mm)										
	Ø14	Ø16	Ø18	Ø20	Ø22	Ø25	Ø28	Ø30	Ø32	Ø35	⇒ Ø40
AOET11T3__PEER-P__	-P16	-P20	-	-P25	-	-	-	-	-	-	-
AOET1705__PEER-P__	-	-	-	-	-P25	-	-	-P32	-	-	-

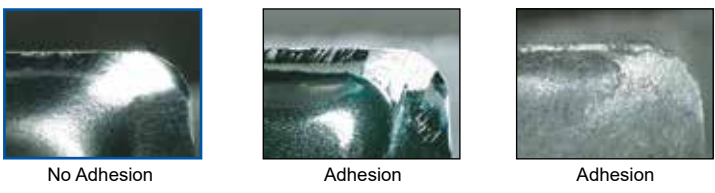

#### S Type

Sharp edge chipbreaker for non-ferrous metals, with excellent adhesion resistance

Suppresses adhesion with rake face lapping.

DLC coat inserts available for further improved adhesion resistance.

Machine: Vertical Machining Centre BT50,  
Work Material: AISi12Cu  
Tool: WEZ 11020 E03 (Ø 20, 3 teeth)  
Insert: AOET11T308PEER-S (H20)  
Cutting Conditions:  $v_c = 350$  m/min,  $f_z = 0,1$  mm/t,  $a_p = 3$  mm,  $a_e = 10$  mm, dry

## Insert Grades Selection Guide

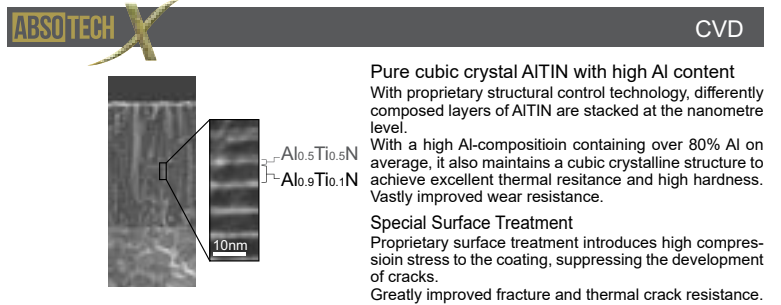

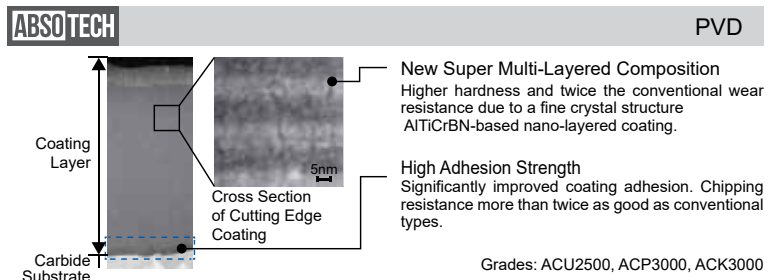

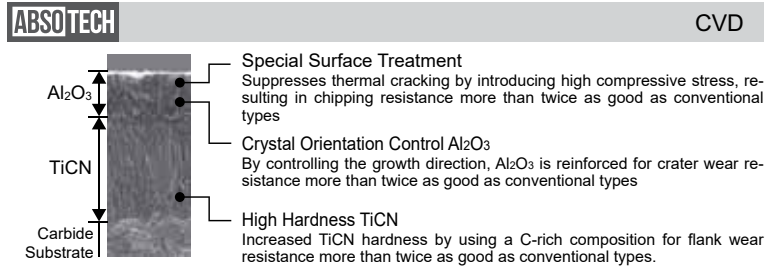

New generation coated carbide grades **XCU2500**/**XCK2000** now available. Enhanced lineup of coatings in addition to cemented carbide and cermet for milling steel, stainless steel, cast iron and aluminum alloy.

The above recommended cutting conditions are meant as a guide. Actual conditions will depend on the individual machine, work shape and clamping. They will need to be adjusted according to machine rigidity, work clamp rigidity, cutting depth and other factors.

For groove milling, reduce the feed rate approximately 70 % of the corresponding value shown above.

Type	Max. $a_e$ (mm)
WEZ11	3
WEZ17	5

## ■ Precautions for Mounting

- (1) Clean the mounting seat and contact parts.
- (2) Apply screw lubrication to the screw thread as well as the screw head face to prevent seizure.
- (3) While pressing the insert solidly against the seat surface, tighten at the screws with the included wrench.
- (4) After tightening, check that there are no gaps between the surfaces.

Inserts are sold separately. Check the arbor mounting size (DCB) when selecting the cutter.

\* For securing the Ø 80 mm and Ø 100 mm cutter to the arbors, use JIS B1176 hexagonal bolt.  
(Ø 80 mm: M12x30 to 35 mm, Ø 100 mm: M16x40x45 mm)

Inserts are sold separately. Check the arbor mounting size (DCB) when selecting the cutter.

\* For securing the Ø 80 mm and Ø 100 mm cutter to the arbors, use JIS B1176 hexagonal bolt.  
(Ø 80 mm: M12x30 to 35 mm, Ø 100 mm: M16x40x45 mm)

# "Wave Mill" Series WEZR Type

**New**

Repeater

## ■ Features

- High-efficiency Shoulder Milling  
Inserts for "WaveMill" WEZ type are arranged in multiple stages forming a long cutting edge, to enable high-efficiency shoulder milling of deep steps.
- Very Low Vibration Tendency  
Sharp milling inserts and irregular pitched body help to reduce chatter marks caused by vibration.
- Support for all Types of Work Materials  
A lineup of grades specific to each work materials, as well as the general-purpose ACU2500 grade, which is applicable to steel, stainless steel and cast iron.

## ■ Body Features

- Improved Flute Shape

Optimised, upward tapering chip pocket geometry for improved chip removal and increased rigidity of the cutter body.

- Irregular Pitched Body

Irregular pitched body reduces vibration tendency

## ■ Cutting Performance

- Significantly less vibrations are a result of the combination of sharp inserts and irregular tooth pitch.

Capable of stable machining even with BT40 spindle machines

Vertical Machining Centre BT40

Machine: Vertical Machining Centre BT40,  
Work Material: C55, overhang amount 60 mm  
Tool: WEZR 11032E3632Z03 (Ø 32, 3 teeth, 4-stage)  
Insert: AOET11T308PEER-G (ACU2500)  
Cutting Conditions:  $v_c = 150$  m/min,  $f_z = 0,1$  mm/t,  $a_p = 30$  mm, dry

Capable of stable machining even with a long overhang

Vertical Machining Centre BT50

Machine: Vertical Machining Centre BT50,  
Work Material: 42CrMo4  
Tool: WEZR 17063RS5727Z04 (Ø 63, 4 teeth, 4-stage)  
Insert: AOET170508PEER-G (ACU2500)  
Cutting Conditions:  $v_c = 150$  m/min,  $f_z = 0,15$  mm/t,  $a_p = 50$  mm, dry

## ■ Cutting Performance

- Optimised cutting edge shape and high-precision molding technology result in excellent shoulder accuracy.

## ■ Application Range

- Steel, stainless steel, cast iron
- Aluminum alloys, titanium alloys

### Note:

The depth of cut figures above are guidelines for use with BT50 machine tools. Use a depth of cut of approximately 50% if using BT40.  
For a tool overhang of  $L/D = 3$  or  $L/D = 4$ , use a depth of cut of approximately 50% or 25%, respectively.  
There may be cases where machining cannot be performed at the depth of cut figures above, depending on the machine rigidity and work rigidity.  
Cutting speed and feed rate data you will find on the next pages.

## Recommended Cutting Conditions

ISO	Work Material	Hardness (HB)	Chipbreaker	Cutting Speed $v_c$ (m/min)	Feed Rate $f_z$ (mm/t)	Grades
P	Carbon Steel	≤ 280HB	G	100-150-200	0,10-0,20-0,30	ACU2500 XCU2500 ACP2000 ACP3000
	Alloy Steel	> 280HB	G	80-100-120	0,10-0,20-0,30	
M	Stainless Steel	≤ 280HB	G	100-150-80	0,10-0,20-0,30	ACU2500 ACM200 ACM300
K	Cast Iron Ductile Cast Iron	-	G	100-150-200	0,10-0,20-0,30	ACU2500 XCK2000 ACK2000 ACK3000
S	Exotic Alloy	-	G	40-50-60	0,10-0,20-0,30	ACU2500 ACM200 ACM300
N	Aluminum Alloy	Si ≤ 12,6%	S	300-500-800	0,05-0,10-0,15	DL2000 H20
		Si > 12,6%	S	100-200-250	0,05-0,10-0,15	

Min. - Optimum - Max.

Note:

The cutting conditions above are a guide. Actual conditions will need to be adjusted according to machine rigidity, work clamp rigidity, depth of cut and other factors. There may be cases where machining cannot be performed under recommended cutting conditions, depending on the machine rigidity and work rigidity.

\*When mounting inserts with nose radius of ≥ 2,4 mm, modification of the body is required.

Modify this edge.

Reworking guidelines

- Corner radius = 2,4 mm: C = 1 mm (AOMT170524PEER)
- Corner radius = 3,0 mm: C = 1 mm (AOMT170530PEER)
- Corner radius = 3,2 mm: C = 1 mm (AOMT170532PEER)
- Corner radius = 4,0 mm: C = 2 mm (AOMT170540PEER)
- Corner radius = 5,0 mm: C = 5 mm (AOMT170550PEER)
- Corner radius = 6,4 mm: C = 5 mm (AOMT170564PEER)
- Standard: R = 1 mm
- C: Chamfer
- R: Radius

## Identification Details

## General Features

### Stable and Reliable Tool Life in Titanium Roughing

With combination of high toughness grade ACM300 and optimized cutting edge shape, stable and reliable tool life are achieved in roughing application of Titanium.

### Suitable for Titanium Structure Parts for Aircraft

MTIX cutter with wide range of insert nose-radius and large ramping angle availability is suitable for variable application of titanium structure parts for aircraft.

### Large Application Range

ISO	Grade	Coating Thickness (µm)	Features
<b>S</b>	ACM300	3	Realises superb stability in machining of Titanium, due to a high-strength carbide substrate and highly chipping-resistance coating.

## Recommended Cutting Conditions

Min. - Optimum - Max.

ISO	Material	Cutting Speed (m/min)	Feed Rate (mm/t)	$a_p$ (mm)	Grade
<b>S</b>	Titanium	30-60-90	0,05-0,10-0,15	<13	ACM300

Inserts with nose radius of RE ≥ 5,0 are for use with bodies that have a "-5,0" part number suffix

## ■ Precautions for Mounting

- (1) Clean the mounting seat and contact parts.
- (2) Apply screw lubrication to the screw thread as well as the screw head face to prevent seizure.
- (3) While pressing the insert solidly against the seat surface, tighten at the screws with the included wrench.
- (4) After tightening, check that there are no gaps between the surfaces.

Cutter Body	MTIX16 ____	MTIX16 ____ -5,0
Insert Radius $RE \leq 4,0$ mm	<b>OK</b>	Not recommended. The insert has no support from the cutter body.
Insert Radius $RE \geq 4,0$ mm	<b>OK with modification</b>  1,5 mm less height	<b>OK</b> 
<b>Modification method</b> ① Grind 1,5 mm from top ② Add chamfer 4,5 mm		

## ■ Cutting Performance

## ■ Application Example

Structural Parts, Ti 6Al4V, Counterboring / Ramping

ACM300 achieved twice longer tool life against competitor's grade.

Cutter: MTIX 16050RS05 (Ø 50, No. of teeth:5)  
 Insert: XOMT 160540 PEER-E (ACM300)

Cutting Data:  $v_c = 50$  M/min,  $a_p = 4$  mm,  $f_z = 0,12$ mm/t,  $a_e = 10$  mm, wet

# "Sumi Dual Mill" DMSW Series

## General Features

- High productivity thanks to an ultra-high metal removal rate as well as high economic efficiency, due to the stable six-edged insert.
- The arc-shaped cutting edge reduces the cutting force to a minimum. High-efficiency machining at maximum feed rate per tooth of 3,5 mm/t is possible.

## Application Range

- Cutting depths up to 3 mm can be achieved. Feed rate per tooth up to 3,5 mm/t.
- Increases productivity.

## Product Range

## Chipbreaker

Work Material	<b>P</b> Steel <b>M</b> Stainless steel <b>K</b> Cast iron	<b>P</b> Steel <b>M</b> Stainless steel <b>K</b> Cast iron
Applications	Main chipbreaker general-purpose to interrupted milling	Roughing, heavy interrupted cutting and hardened steel milling
Chip breaker	General purpose	High strength
	<b>G</b> type	<b>H</b> type
Cutting edge cross section	0,12 mm 	0,22 mm 

## Chipbreaker Selection Guide

# "Sumi Dual Mill" DMSW Series

## ■ Features

- A small chip cross-section due to a small cutting angle enables high feed rates per tooth.

- Economical double-sided insert with 6-corner specification. Reassuring thick at 7 mm.

WNMU type

Conventional tool

- Even at high feedrates of 2,0 mm/t or more, a reasonable surface finish can be attained.

Machine:	Vertical machining centre BT50,	Work material:	C50	Insert:	WNMU 0807ZNER-G (ACU2500)
Tool:	DMSW 08063RS04	Cutting data:	$v_c = 150$ m/min, $f_z = 2,5$ mm/t, $a_p = 0,5$ mm, $a_e = 40$ mm, dry		

- Small cutting angle (15°) controls cutting force toward the back force direction. Suppresses chatter in long tool overhang machining, increasing efficiency.

DMSW type

(Reference) Shoulder milling tool

Machine:	Vertical machining centre BT50,	Work material:	C50
Tool:	DMSW 08050RS04	Insert:	WNMU 0807ZNER-G (ACU2500)
Cutting data:	$v_c = 160$ m/min, $f_z = 0,65$ mm/t, $a_p = 0,80$ mm, $a_e = 45$ mm, dry		

## Precautions for Corner Finishing

Actual machined corners will have uncut and overcut portions due to the shape of the inserts.

Programmed corner radius	Uncut portion	Overcut portion	Fig.
2,0	1,22	0	1
2,5	1,08	0	1
3,0	0,95	0	1
3,5	0,83	0,04	2

(mm)

Take note of the cutter mounting size (DCB) when selecting a cutter. Inserts are sold separately.

For mounting the Ø 80 mm, Ø 85 mm and Ø 100 mm sized cutters marked with \* to an arbor, use a JIS B1176 hexagonal socket bolt (metric specification : M12x30 to 35 mm, inch specification: M16x40 to 45 mm).

# "Wave Mill" Series

## WFXH Type

Expansion

### General Features

WaveMill WFXH type is a high efficiency, multi-purpose cutter, that uses the WFX series inserts for high-feed roughing and a variety of processes.

### Characteristics

Stable, high-efficiency milling with superior cutting edge sharpness. Supports various types of processes (ramping and helical milling). Able to use the selection of inserts from the WFX series.

### Chipbreaker Selection

Work Material	P M K	Steel, Stainless Steel, Cast Iron			N	Aluminium Alloy

### Minimum Cutting Diameter

Minimum cutting diameter (DCN) will depend on the insert that is used. Using an insert with a large nose radius is recommended for the WFXH type.

Body Cat. No.	DC	DCN based on insert nose			
		RE0,4	RE0,8	RE1,2	RE1,6
WFXH 08025 M1Z22	25	10,4	10,9	11,5	-

The above recommended cutting conditions may require adjustment according to machine rigidity and work rigidity. The above figures are guidelines for use with the BT50 machine tool.

The above conditions assume a tool overhang length of L/D = 3 (i.e. overhang length is 3 times tool diameter) or less.

When tool overhang is more than L/D = 3 and less or equal L/D = 5, settings should be adjusted to approximately 70 % to 80 % of those indicated in the above cutting conditions (i.e. ap and fz).

When tool overhang is more than L/D = 5 and less or equal L/D = 8, settings should be adjusted to approximately 50 % to 60 % of those indicated in the above cutting conditions (i.e. ap and fz).

## ■ Edge Selection Guide

\*2 Edge length  
GX type = 9,0 mm

- **Reduces Running Costs by Drastically Increasing Blade, Insert Regrinding Allowance (to 1,0 mm)**

Assuming 0,2 mm of regrinding each time, an edge can be used up to 6 times. (Peripheral edge cannot be reground.)

If you wish to use reground blades you shall use sets of blades with matching size of the same level in order to keep the balance.

## ■ Performances

### ● High-Speed / High-Efficiency Cutting

Realizes ultra-high efficiency machining with  $v_f = 30.000$  mm/min

Comparison: Cutter Diameter  $\varnothing$  100 mm

	Spindle Speed min <sup>-1</sup>	Number of Teeth	Feed Rate $v_f$ (mm/min)
ANX Series	18.000	18	32.400
Competitor	9.500	12	11.400

### ● Drastically Reduces Runout Adjustment Time

- Simple screw-fastening structure
- Enables fine adjustments to be made easily
- High-rigidity body

### ● Chip Control

### Blade-Through Coolant Chip Breaking

ALNEX ANX Series

Competitor

Work Material: G-AlSi12Cu  
Cutting Conditions:  $v_c = 2500$  m/min,  $f_z = 0,05$  mm/t,  $a_p = 0,5$  mm, wet

## ■ Adjustment of the Blades, Runout Alignment

①

②

③

④

Insert the blade into its seat.

While holding the blade against the seat, install the clamping bolt using the provided wrench, pre-tightening the bolt. (recommended pre-torque is 1 N·m)

Using the provided wrench for the height adjustment screw, set the height to your predetermined value.

Fully tighten the clamp bolt. (recommended torque is 2 N·m)

## ■ CVD Single Crystal Diamond SCV10 Wiper Blade

Wiper blade adopts high-strength single-crystal diamond using Sumitomo Electric Hardmetal's vapour phase synthesis technology.

Sharp cutting edge realises burr-free, mirror finish surface quality in aluminum alloy machining.

Superior wear resistance maintains cutting edge sharpness for a long time, reducing total tool costs.

## ■ Burr-free

Sharp cutting edge and excellent wear resistance suppress burrs over the long term.

Cutting Edge Photo (After use)

## ■ Mirror Finishing

Sharp cutting edge achieves mirror finish with cutting alone.

Workpiece surface after machining

## ■ Polycrystalline Diamond SUMIDIA DA1000 / DA90

Through the ideal combination of diamond particle size and binder, SUMIDIA DA1000/DA90 possess various features and is suitable for all kinds of applications such as machining of aluminum alloy and cemented carbide.

## ■ Grades, Features and Applications

Grade	Features	Applications	Diamond share (%)	Average grain size of diamond particles (μm)	Hardness HK (GPa)	TRS (GPa)
DA1000	High-density sintered grade made of ultra-fine grain diamond that exhibits excellent wear and fracture resistance as well as edge sharpness.	Machining of High-Silicon Aluminum Alloy, Rough, Interrupt and Finish Machining of Aluminum Alloy, Woodcraft or Wooden Board Cutting/Facing, General Finishing of Non-Ferrous Metals	90–95	≤ 0,5	50–60	≈ 2,60
DA90	Contains coarser diamond particles than other grades, giving it good wear resistance suitable for the machining of carbides and high-silicon aluminum. Shows the highest diamond content for excellent wear resistance.	Machining of High-Silicon Aluminum Alloy, Machining of Aluminum Composite (MMC), Green or Semi-Sintered Cemented Carbide & Ceramic Roughing, Machining of Sintered Ceramic/Stone/Rock	90–95	≤ 50	50–65	≈ 1,10

## ■ Grade Applications

	Work Material	Applicable Grade	Example Parts
Aluminum	Sintered Aluminum, Wrought Aluminum Alloy	DA1000	Piston Liners, Machine Parts, etc.
	Alloys for Die Casting		Transmission Case, Oil Pan, Cylinder Block
	Alloys for Casting Low Si (≤ 12%)		Cylinder Head
	Alloys for Casting High Si (> 12%)		Cylinder Block
Non-ferrous metal	Non-Ferrous Sintered Alloy	DA1000	Bush
	Gunmetal, Carbon		Connecting Rod
	Fe Combined	DA90	Cylinder Block, Bearing Cap

Blades are sold separately. If using a blade for corner radius machining (ANB1604R/ANB1608R), DC = DCX.

The weight includes the weight of the blade and parts (excluding the centre bolt).

All aluminium alloy bodies with a maximum blade diameter (DCX) of Ø 80 to Ø 125 have the same diameter (DCB) of the retainer hole (metric Ø 27/in Ø 25,4).

## Recommended Cutting Conditions

Si content ≤ 12,6 %

Min. - Optimum - Max.

ISO	Work Material	Hardness	Cutting Speed $v_c$ (m/min)	Feed Rate $f_z$ (mm/t)	Grade
<b>N</b>	Aluminum Alloy	—	2.000–2.500–3.000	0,05–0,13–0,20	DA1000

Si content > 12,6 %

Min. - Optimum - Max.

ISO	Work Material	Hardness	Cutting Speed $v_c$ (m/min)	Feed Rate $f_z$ (mm/t)	Grade
<b>N</b>	Aluminum Alloy	—	400–600–800	0,05–0,13–0,20	DA1000 DA90

Combined Milling of Cast Iron/Aluminum Alloy

Min. - Optimum - Max.

ISO	Work Material	Hardness	Cutting Speed $v_c$ (m/min)	Feed Rate $f_z$ (mm/t)	Grade
<b>K</b> <b>N</b>	Cast Iron/ Aluminum Alloy	—	300–400–500	0,05–0,13–0,20	DA90

The above recommended cutting conditions are meant as a guide. Actual conditions will depend on the individual machine rigidity, work clamp rigidity, depth of cut and other factors.

## Spare Parts

Sold separately.

Applicable Cutters	Clamp Screw		Adjustment Screw	Wrench	Adjustment Wrench	Centre Bolt		Assembly Wrench
		(Nmm)					(Nmm)	
ANXA 16080R(S)_ 16100R(S)_ 16125R(S)_ 16160R(S)_	BXA0310IP	2,0	HFJ	TRXW10IP	ANT	BXH1235-D33	50	HFVT
						BXH2036-D50	200	

The adjustment spanner (ANT) can also be used for height adjustment of the RF type cutters for high speed machining and the HF type cutters for high efficiency machining.

## Wiper Blade Step Amount

When using the wiper blade, in order to maintain balance, be sure to use a cutter with an even number of cutting edges and place the wiper blades at opposite positions.

### Maximum D.O.C. Guide (SRF50RS, 5 teeth)

The contains guidelines on the maximum D.O.C., determined from internal tests. "O" mark indicates the possible application range. Actual cutting conditions should be set, based on actual machine and work characteristics.

Feed D.O.C. (mm)	Feed Speed, $v_f$ (mm/min)		
	2.500	4.000	5.000
	Feed Rate, $f_z$ (mm/tooth)		
	0,05	0,08	0,10
0,5	○	○	○
1,0	○	○	○
1,5	○	○	○
2,0	○	○	○
2,5	○	○	○
3,0	○	○	○
3,5	○	○	-
4,0	○	-	-
4,5	○	-	-
5,0	○	-	-

### Cutting Conditions

Cutter: SRF 50 RS  
 Insert: SNEW 09T3 ADFR-NF (DA1000)  
 n : 10.000 rpm  
 Width: 35mm at D.O.C. indicated above

### Recommended Cutting Conditions for RF and SRF Type Cutters

Work Material		Process	Grade	Cutting Speed (m/min)		Feed Rate (mm/tooth)	Depth of Cut (mm)	
				RF Type	SRF Type		RF Type	SRF Type
Aluminium Alloy	Si < 13 %	Finishing	DA1000 (PCD)	2.000-5.000	-4.000	0,05-0,2	-3,0	-5,0
		Roughing	H1 (Carbide)	1.000-2.500	-			
	Si ≥ 13 %	Finishing	DA1000 (PCD)	400-800	-800			
		Roughing	H1 (Carbide)	200-400	-			

# SUMIBORON "BN Finish Mill" FMU Type

## High Speed Finishing of Grey Cast Iron

### ■ Features

- High speed machining  $v_c=1.500\text{m/min}$
- Excellent surface roughness  $R_z = 3,2$  ( $R_a = 1,0$ )
- Safety structure for the centrifugal force under high speed cutting conditions
- Run-out is less than  $10\ \mu\text{m}$
- Easy assembling method using the setting gauge
- Running cost is reduced because of economical insert

## SUMIBORON "BN Finish Mill"

### ■ Application

GG25–GG30 (HB200–250) grey cast iron with pearlite matrix, and ferrite matrix (HB130–160)

Application examples: engine block, cylinder block, etc

### ■ Specifications

FMU Type:  $\varnothing 80\text{--}\varnothing 315\ \text{mm}$   
 Insert: SNEW1203ADTR/L  
 Low cutting force type: SNEW1203ADTR/L-S

### ■ Recommended Cutting Conditions

Speed:  $v_c = 800\text{--}2000\ \text{m/min}$   
 Feed:  $f_z = 0,1\text{--}0,3\ \text{mm/tooth}$   
 Depth:  $a_p = 0,5\ \text{mm or less}$   
 Dry cutting

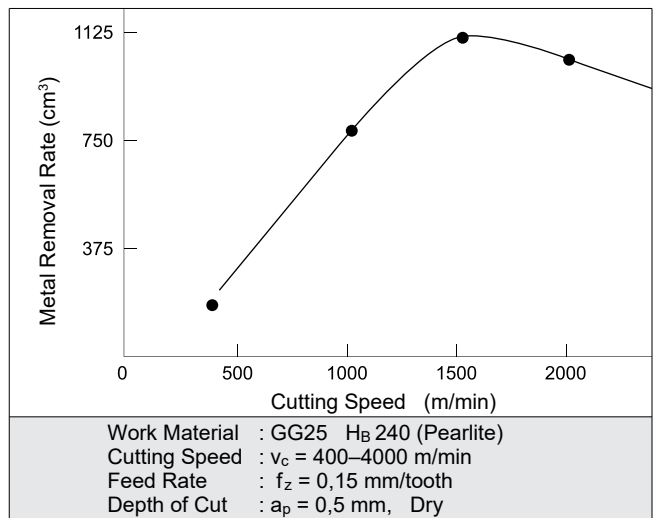

### ■ Performance

#### ● Tool Life Diagram

#### ● Estimated Tool Life

- Milling of ductile cast iron and alloy steel casting do not produce the best results.
- Dry cutting is recommended. Wet cutting will result in chipping of cutting edges in the early stages due to thermal cracking.

# Exchangeable Head Endmills Modular Tools

## General Features

Indexable head endmills are available in 10 types:

<b>WEZ</b>	<b>MSX</b>
<b>WEX</b>	<b>RSX</b>
<b>WFX</b>	<b>WRXC</b>
<b>DMSW</b>	<b>WFXC</b>
<b>WFXH</b>	<b>ANXS</b>

In addition to carbide arbors and steel arbors, the lineup of integrated BBT types enables a variety of combinations.

General-purpose grade applicable to any work material. Introducing the new grade ACU2500, which is applicable to a wide variety of processes and work materials such as steel, stainless steel and cast iron.

Suitable for milling with **long overhangs** when combined with carbide or steel arbors!

Easy to change screw-on endmill type WEX and carbide arbor

When combined with BBT integrated arbors, **high load milling** is supported.

RSX type + BBT30 integrated arbor

### Modular Head + Carbide Arbor

### Standard Shank Type Endmill

Note: Cutting conditions can vary according to cutter reach, rigidity of machine tool / workpiece etc.

## Screw Size and Mounting Cutter Size

Screw CRKS	Applicable Cutter Size (DC)
M8	Ø 16, Ø 18
M10	Ø 20, Ø 22
M12	Ø 24, Ø 28
M16	Ø 30, Ø 32, Ø 35, Ø 40

## Performance

● A Carbide Arbor improves feed rates, surface finish, sizing, and tool life.

### Shoulder Milling Squareness

### Carbide Arbor Comparison ...

Work Material : C50  
 Tool : WEX2025M12Z4 (ø D = 25, 4 teeth)

## Recommended Cutting Conditions

min.-optimum-max.

ISO	Work material	Hardness	Cutting speed $v_c$ (m/min)	Feed rate $f_z$ (mm/t)
P	General steel	< 280 HB	100-160-250	1,0-1,5-2,0
	Alloy steel	< 280 HB	100-160-200	1,0-1,5-1,8
	Alloy steel	< 42 HRC	100-150-180	0,8-1,0-1,2
M	Stainless steel	-	80-120-150	0,8-1,0-1,2
K	Cast iron	-	100-160-250	1,0-1,5-1,8
H	Hardened steel	< 52 HRC	80-100-120	0,3-0,5-0,7

The above figures are guidelines for use with BT50 machine tools at depth of cut ( $a_p$ ) of 1,5 mm.

The above recommended cutting conditions may require adjustment depending on machine rigidity and workpiece rigidity.

# "METAL SLASH MILL" MSX Type

Ultra High Feed

Boosts Productivity – Cuts Costs

## ■ Features

The Metal Slash Mill type MSX is a new multi function high shear milling cutter with ultra high feed capability suitable for face milling, slotting, plunging and helical boring. At 50GPa the ultra hard Super ZX coated inserts feature a sharp cutting edge which demonstrates extreme resistance to wear and heat massively boosting productivity and tool life.

The vibration free cutting action ensures accurate sizing, improved surface finish, and protection of the machine tool/workpiece from damage. Inserts are double clamped in wide chip gullets to maximise rigidity and chip evacuation with temperature at the cutting edge being easily controlled via an optional air blast through integral coolant holes. The MSX cutter is readily applied to general purpose machining across the P (steel) M (stainless) and K (cast iron) range of workpiece materials with impressive results.

## ■ Advantages

**Integral Coolant Hole**  
Optimised chip removal – massive chip evacuation pockets

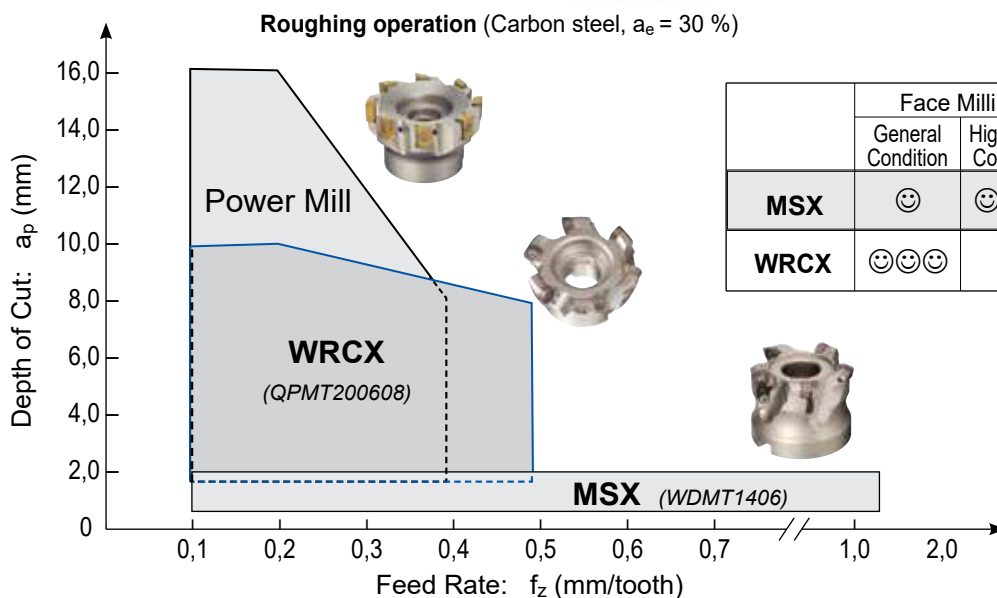

**Wide Application Range**  
Face milling, slotting, helical boring and plunging

**Low Cutting Force**  
Unique insert shape reduces cutting force

**Double Clamp**  
Secure insert clamping for stable cutting

## ■ Application Range

Recommended Tightening Torque (N·m)

- The above recommended cutting conditions may require adjustment according to machine rigidity and work rigidity. The above figures are guidelines for use with the BT50 machine tool.
- The above cutting conditions assume a tool overhang length of  $L/D = 3$  (i.e. overhang length is 3 times tool diameter) or less. When tool overhang is **more than  $L/D = 3$  and less than or equal  $L/D = 5$** , settings should be adjusted to approximately **70 to 80 %** of those indicated in the above cutting conditions (i.e.  $a_p$  and Feed Rate). When tool overhang is **more than  $L/D = 5$  and less than or equal  $L/D = 8$** , settings should be adjusted to approximately **50 to 60 %** of those indicated in the above cutting conditions (i.e.  $a_p$  and Feed Rate).

## Information for Programming

For machine programming, please use the theoretical corner radius (R) shown in the list.

Maximum depth (d) between theoretical radius and actual profile will be left on the finished surface, as shown below.

	Body	Insert	Theoretical Radius (R)	Remaining Depth (d)
	MSX 06000	WDMT 0603....	2,0	0,403
	MSX 08000	WDMT 0804....	2,5	0,593
	MSX 12000	WDMT 1205....	3,0	1,030
	MSX 14000	WDMT 1406....	3,5	1,219

### General Features

WaveMill WFXH type is a high efficiency, multi-purpose cutter, that uses the WFX series inserts for high-feed roughing and a variety of processes.

### Characteristics

Stable, high-efficiency milling with superior cutting edge sharpness. Supports various types of processes (ramping and helical milling). Able to use the selection of inserts from the WFX series.

### Notes on Corner Finishing - Remaining Material

Actual machined corners will have uncut and overcut portions due to the shape of the inserts.

Fig. 1

Fig. 2

### Minimum Cutting Diameter

Minimum cutting diameter (DCN) will depend on the insert that is used. Using an insert with a large nose radius is recommended for the WFXH type.

The above recommended cutting conditions may require adjustment according to machine rigidity and work rigidity. The above figures are guidelines for use with the BT50 machine tool.

The above conditions assume a tool overhang length of L/D = 3 (i.e. overhang length is 3 times tool diameter) or less.

When tool overhang is more than L/D = 3 and less or equal L/D = 5, settings should be adjusted to approximately 70 % to 80 % of those indicated in the above cutting conditions (i.e. a<sub>p</sub> and f<sub>z</sub>).

When tool overhang is more than L/D = 5 and less or equal L/D = 8, settings should be adjusted to approximately 50 % to 60 % of those indicated in the above cutting conditions (i.e. a<sub>p</sub> and f<sub>z</sub>).

# "Sumi Dual Mill" DFC Type

Expansion

## General Features

The Sumi Dual Mill DFC type employs cost effective double-sided inserts for high toughness and enhanced accuracy.  
The double-side inserts are flexible and reduces costs.

## Large Line-up

- Diameter from Ø 25 mm to Ø 200 mm
- Available as standard, fine and extra-fine pitch
- Bore diameter: metric
- Insert geometry: L, G, GS, H

## Cutter Body

## General Features

High-efficient and high precision tangential shoulder milling cutter with tangentially mounted carbide inserts.

## Characteristics

- Tough & Sharp cutting edge
- Very accurate and excellent surface finish
- Wide product range

## Product Range

### TSX Shoulder Milling Cutter

	Cat. No.	Series	Diameter Range / No of Teeth													Shape		
			Ø16	Ø20	Ø25	Ø32	Ø40	Ø50	Ø63	Ø80	Ø100	Ø125	Ø160	Ø200	Ø250		Ø315	
Shell Type	TSX 08000RS	Standard Pitch					4	5	6	7								 → G30-G37

\* Different shank diameters in stock

### Suitable Applications

- Supports Ramping, Helical Milling, Plunge Cutting

### Optimised Body Design

Wide guide face for stable insert clamping.

WEZ11 type

### Chipbreaker Lineup

Work Material	P M K S H					N
	L Type	G Type	H Type	F Type	P Type	S Type
Chipbreaker						
AO_T11 Cutting edge geometry						
AO_T17 Cutting edge geometry						
Applications	Light cut, low rigidity machining	Main breaker for general purpose to interrupted machining	Heavy cut, heavy interrupted machining, hardened steel	Light cut, finishing, low-burr design	Light cut, high-precision machining, high surface wall quality	For non-ferrous metals

## Lineup of Chipbreakers for Ground Inserts

### F Type

Cutting edge specialized for sharpness and machining accuracy

Sharpness from ground finish enables burr control.

Excellent squareness with all diameters.

Machine: Vertical Machining Centre BT50,  
Work Material: X5CrNiS18 9  
Tool: WEZ 11050 RS07 (Ø 50, 7 teeth)  
Insert: AOET11T308PEER-F (ACU2500)  
Cutting Conditions:  $v_c = 120$  m/min,  $f_z = 0,12$  mm/t,  $a_p = 1$  mm,  $a_e = 30$  mm, dry

### P Type

Chipbreaker for wall surface squareness equivalent to solid endmills

Premium item with cutting edge shape optimised for each cutter diameter while maintaining the F type chipbreaker's sharpness.

Enables wall surface squareness equal to solid endmills through a blade shape optimised for each tool diameter.

P Type Chipbreaker Selection

Cat. No.	Cutter Diameter (mm)									
	Ø14	Ø16	Ø18	Ø20	Ø22	Ø25	Ø28	Ø30	Ø32	Ø35 => Ø40
AOET11T3 PEER-P	-P16	-P20	-	-P25	-	-	-	-	-	-
AOET1705 PEER-P	-	-	-	-P25	-	-P32	-	-	-	-

Machine: Vertical Machining Centre BT50,  
Work Material: C50  
Tool: WEZ 11020 E03 (Ø 20, 3 teeth)  
Insert: AOET11T308PEER-P20 (ACU2500)  
Cutting Conditions:  $v_c = 150$  m/min,  $f_z = 0,1$  mm/t,  $a_p = 8$  mm x 3 passes,  $a_e = 1$  mm, dry

### S Type

Sharp edge chipbreaker for non-ferrous metals, with excellent adhesion resistance

Suppresses adhesion with rake face lapping.

DLC coat inserts available for further improved adhesion resistance.

Machine: Vertical Machining Centre BT50,  
Work Material: AISi12Cu  
Tool: WEZ 11020 E03 (Ø 20, 3 teeth)  
Insert: AOET11T308PEER-S (H20)  
Cutting Conditions:  $v_c = 350$  m/min,  $f_z = 0,1$  mm/t,  $a_p = 3$  mm,  $a_e = 10$  mm, dry

# "Wave Mill" Series

## WEZ Type

### Recommended Cutting Conditions

#### WEZ11 Type

Cutter: WEZ 11020 E03  
 Insert: AO\_T11T3 type  
 Cutting Data:  $a_p = 3 \text{ mm}$ ,  $a_e = 10 \text{ mm}$ , dry

Min. - Optimum - Max.

## ■ Plunge Cutting - Upper Limit for Radial Width $a_e$

Type	Max. $a_e$ (mm)
WEZ11	3
WEZ17	5

## ■ Precautions for Mounting

- (1) Clean the mounting seat and contact parts.
- (2) Apply screw lubrication to the screw thread as well as the screw head face to prevent seizure.
- (3) While pressing the insert solidly against the seat surface, tighten at the screws with the included wrench.
- (4) After tightening, check that there are no gaps between the surfaces.

## Recommended Cutting Conditions

→ H28

Tool: WEZ17025ES02-16  
Insert: AOET1705\_ PEER-F

For cutting conditions by work material, see page 8.

When using G type chipbreakers, set the efficiency to 80%.

The recommended cutting conditions may not be practical depending on the operating conditions (e. g. machine, work material shape, clamping system).

F: Finishing  
P: High-precision machining  
S: Non ferrous metals

\*P20 is applicable to cutter diameters Ø 18 mm, Ø 20 mm.  
\*P25 is applicable to cutter diameters Ø 25 mm, Ø 28 mm.

Use peripheral inserts with RE ≤ 0,8 mm from the second step and above.

Min. - Optimum - Max.

Note:

The cutting conditions above are a guide. Actual conditions will need to be adjusted according to machine rigidity, work clamp rigidity, depth of cut and other factors.

There may be cases where machining cannot be performed under recommended cutting conditions, depending on the machine rigidity and work rigidity.

L: Low cutting force  
G: General purpose  
H: Strong edge  
F: Finishing  
P: High-precision machining  
S: Non ferrous metals

Use peripheral inserts with RE ≤ 0,8 mm from the second step and above.

# "Wave Mill" Series WEX Type

For the Smooth and Reliable Cutting Action

## General Features

## Ramping (Slant Milling)

Tool Diam. Ø D	Max. Ramping Angle		
	Type 1000	Type 2000	Type 3000
10	2°30'		
12	1°45'		
14	1°25'	1°40'	
16	1°00'	1°20'	
18	0°45'	1°10'	
20	0°30'	1°00'	
25	0°30'	0°45'	1°30'
32	0°25'	0°35'	1°00'
40	0°20'	0°25'	0°45'
50	0°15'	0°20'	0°30'
63	0°10'	0°15'	0°20'
80			0°15'
100			-

Maximum ramping angle ( $\alpha$  max. max.) depends on cutter diameter.

### Precision insert with strong cutting edge and low cutting force

Wave shaped cutting edge design lowers cutting resistance yet improves cutting edge strength.

Achieving high quality finish with high precision cutting edge.

Smooth cutting even for deep grooves and low rigidity machines.

High precision curved cutting edge

High rake wave cutting edge

Large angle

● Internal Coolant Holes  
Improved chip evacuation with air or coolant supply.

### Wide Variety of Inserts

6 types of chipbreaker design (L, G, H, E, EH and S)

9 milling grades for a wide range of work materials and applications.

- ACP100, ACP200, ACP300 (steel milling grades)

- ACK200, ACK300 (cast iron milling grades)

- ACM200, ACM300 (stainless steel, exotic alloy milling grades)

- DL1000, H1

(aluminium milling grades)

### High Durable Body

Special surface treatment improves corrosion resistance as well as scratch resistance.

Increased screw size improves clamping force and durability.

## Product Range

## ■ WEX1000 Type Expansion

- Efficient machining via high number of inserts
- Precise insert change tolerance provides high surface roughness quality
- High shoulder accuracy due to optimized cutting edge
- Stable cutting conditions when utilising low rigidity machines
- Economic advantages using small AXMT06 inserts

	Aluminium alloy, Si > 13%		S																	250	200	170
	Copper alloy		S																	350	330	300

The above recommended cutting conditions are meant as a guide. Actual conditions will depend on the individual machine, work shape and clamping. They will need to be adjusted according to machine rigidity, work clamp rigidity, cutting depth and other factors.

For groove milling, reduce the feed rate approximately 70 % of the corresponding value shown above.

## Recommended Values for Helical Milling and Ramping

### Helical Boring

≤ Min. Diameter

Center uncut portion cannot be removed by traverse cutting with the same cutter.

≥ Max. Diameter

Center uncut portion can be removed by traverse cutting with the same cutter.

### Plunging

Use at ≤ RMPX

### Recommended Values for Helical and Plunging

Cutter External Diameter DC	WEX1000 (AXMT06...)			WEX2000 (AX□T12...)			WEX3000 (AX□T17...)		
	Helical		Plunging	Helical		Plunging	Helical		Plunging

63	122,0	124,0	0°10'	123,0	125,0	0°15'	120,5	124,0	0°20'
80							154,5	158,0	0°15'
100									
125									

The above recommended values are for a nose radius of 0,8 mm.

## Overview

Based on our proven Wavemill design this new range of WAX cutters is capable of rough and finishing Aluminium Alloys and other Non Ferrous Metals. It is ideal for high productivity Aluminium machining to exacting tolerances in the Aircraft, Electronics, and Automotive industries. The award winning Auroracoat DLC (diamond like carbon) inserts resist chip adhesion and substantially increase both tool life and productivity when dry machining Aluminium helping customers boost compliance with ISO14001 accreditation standards

## Advantages

- High Productivity
- Dry machining capability with MQL system
- DLC (diamond like carbon) inserts
- True 90 degree shoulder milling
- Chip adhesion resistance
- Wide range of nose radius

## Ramping (Slant Milling)

Maximum ramping angle ( $\alpha_{max}$ ) depends on cutter diameter.  
Minimum milling length (L min) is the ramping distance required to reach the maximum cutting depth ( $a_p$  max) at the maximum ramping angle of that cutter.  
Minimum milling length (L) for any depth can be calculated by the equation below:

## WAX3000 E/EL Type (mm)

Cutter Diameter DC	Ramping Angle RMPX max.	Depth-of Cut $a_p$ max.	Milling Distance L min
20	8°	10	72
25	17°	10	33
32	12°	10	47
40	9°	10	64

## WAX3000 RS Type (mm)

Cutter Diameter DC	Ramping Angle RMPX max.	Depth-of Cut $a_p$ max.	Milling Distance L min
50	7°	10	82
60	5°	10	115
80	3°	10	191
100	3°	10	191
125	2°	10	287

## Helical Milling

## Helical Milling Diameter (mm)

Cutter Diameter DC	Milling Diameter øD	
	Min.	Max.
20	22	33
25	29	43
32	43	57
40	59	73
50	79	93
63	105	119
80	139	153
100	179	193
125	229	243

## Maximum Allowable Spindle Speed

Cutter Diameter DC	Spindle Revolution n (min <sup>-1</sup> )	Cutting Speed $v_c$ (m/min)
20	14.000	880
25	29.000	2.200
32	25.000	2.500
40	23.000	2.900
50	20.000	3.100
63	18.000	3.500
80	16.000	4.000
100	14.000	4.400
125	13.000	5.100

# "Wave Repeater Mill" WRX Type

## General Features

The WRX Wave repeater end mill system features AXMT style inserts vertically mounted and positioned to provide a long continuous cutting edge suitable for deep shoulder milling. Designed to run at elevated feed rates the soft cutting action reduces cutting resistance, vibration and noise to substantially improve tool life and surface finish.

Available with our new generation Super FF and Super ZX coated inserts for unbeatable performance.

## Product Range

- WRX 2000 series with 12 mm inserts
- WRX 3000 series with 17 mm inserts
- Cutter Diameters - 20 mm ( $a_p = 18$  mm) to 100 mm ( $a_p = 53$  mm)
- Special Order Options – WRX Cutter with integrated arbor  
Shell type with detachable head
- Wide ISO Application Range – P/M/K/N classification

## Advantages

- Optimised insert positions reduce cutting resistance and vibration
- Integral coolant improves chip flow
- Primary chip slot for smooth and fast chip evacuation
- Optimised insert pocket maximises rigidity
- Bottom edge support improves tool life and cutting performance

## Cutting Resistance Comparison

Work Material: C50  
 Tool: WRX2025RH27E25  
 Cutting Conditions:  $v_c = 100$  m/min,  $f_z = 0,15$  mm/tooth  
 $a_p = 25$  mm,  $a_e = 10$  mm, dry

## Vibration Comparison

Work Material: C50  
 Tool: WRX3080RH53F32  
 Cutting Conditions:  $v_c = 150$  m/min,  $f_z = 0,15$  mm/tooth  
 $a_p = 25$  mm,  $a_e = 10$  mm, dry

L – Low cutting force  
 G – General type  
 H – Strong cutting edge  
 E – For stainless steel  
 EH – Strong edge for stainless steel  
 S – For aluminium  
 \* Cutter body modification is required.

## Application Examples

### Example 1

Work Material	Automotive Component / Cast Iron		
Tool	Body	Sumitomo WRX3000 Type Integrated Arbor	Competitor Ø 50
	Insert	AXMT	18 mm
	Insert grade	ACK300	PVD Type
	Tool dia. (mm)	50	50
	Total teeth	15	12
	Effective teeth	3	3
Cutting Data	Cutting speed (m/min)	78	78
	Feed (mm/t)	0,13	0,13
	Axial depth of cut (mm)	45	45
	Radial width of cut (mm)	5	5
	Coolant	Dry	Dry
Result	Tool life / Cutting edge	500 min	300 min
Benefits	1,7 times longer tool life		

### Example 2

Work Material	Machine Parts / Stainless Steel		
Tool	Body	Sumitomo WRX3040RH40E40	Competitor Ø 40
	Insert	AXMT	18 mm
	Insert grade	ACP300	PVD Type
	Tool dia. (mm)	40	40
	Total teeth	9	6
	Effective teeth	3	2
Cutting Data	Cutting speed (m/min)	125	125
	Feed (mm/t)	0,2	0,2
	Axial depth of cut (mm)	40	40
	Radial width of cut (mm)	5	5
	Coolant	Wet	Wet
Result	Tool life / Cutting edge	20	5 ~ 10
Benefits	Stable machining, double tool life with no breakage		

→ G59

- Dry machining is recommended (air cooling) - if lubricant is used, we recommend CVD coated grades (ACP100 / ACK200) or tough PVD grades (ACP300 / ACK300).  
- Insert geometry: L type for low cutting forces, thinly coated components. G type for general application, H type offers high cutting edge stability for rough and heavy cutting conditions.

## General Features

### Stable and Reliable Tool Life in Titanium Roughing

With combination of high toughness grade ACM300 and optimized cutting edge shape, stable and reliable tool life are achieved in roughing application of Titanium.

### Suitable for Titanium Structure Parts for Aircraft

MTIX cutter with wide range of insert nose-radius and large ramping angle availability is suitable for variable application of titanium structure parts for aircraft.

### Large Application Range

ISO	Grade	Coating Thickness (µm)	Features
<b>S</b>	ACM300	3	Realises superb stability in machining of Titanium, due to a high-strength carbide substrate and highly chipping-resistance coating.

## Recommended Cutting Conditions

Inserts with nose radius of RE ≥ 5,0 are for use with bodies that have a "-5,0" part number suffix

## Precautions for Mounting

- Clean the mounting seat and contact parts.
- Apply screw lubrication to the screw thread as well as the screw head face to prevent seizure.
- While pressing the insert solidly against the seat surface, tighten at the screws with the included wrench.
- After tightening, check that there are no gaps between the surfaces.

# "Wave Ball Mill" for Roughing WBMR Type

## ■ Features

Particularly suitable for die mold machining the WBMR replaceable insert ball nose endmill efficiently roughs complex profiles.

Its high feed rate capability is a direct result of a sharp cutting edge which is maintained during the cutting cycle by the special cemented carbide substrate working in parallel with the ultra hard ZX coating.

- Advantages
  - Wave shaped cutting edge
  - Economical M class insert
  - Precise clamping
  - High feed rate capability

## ■ Performance

<p>● Cutting Resistance</p> <p>Cutting Conditions (Shoulder milling, downcut)  <math>v_c = 200</math> m/min, <math>f_z = 0.15</math> mm/tooth                  Axial <math>a_p</math>: 5 mm, Radial <math>a_e</math>: 5 mm                  Work Material : C50</p>	<p>● Anti-Rotational Mechanism</p> <p>Circumferential movement of the insert caused by cutting forces is controlled by guide faces A, B &amp; C, so as to allow stable cutting.</p>	<p>● Insert Life</p> <p>Cutting Conditions (Shoulder milling, downcut)  <math>v_c = 100</math> m/min, <math>f_z = 0.15</math> mm/tooth                  Axial <math>a_p</math>: 5 mm, Radial <math>a_e</math>: 5 mm                  Work Material : X40CrMoV5-1(HRC45)</p>

# "Wave Ball Mill" for Finishing WBMF Type

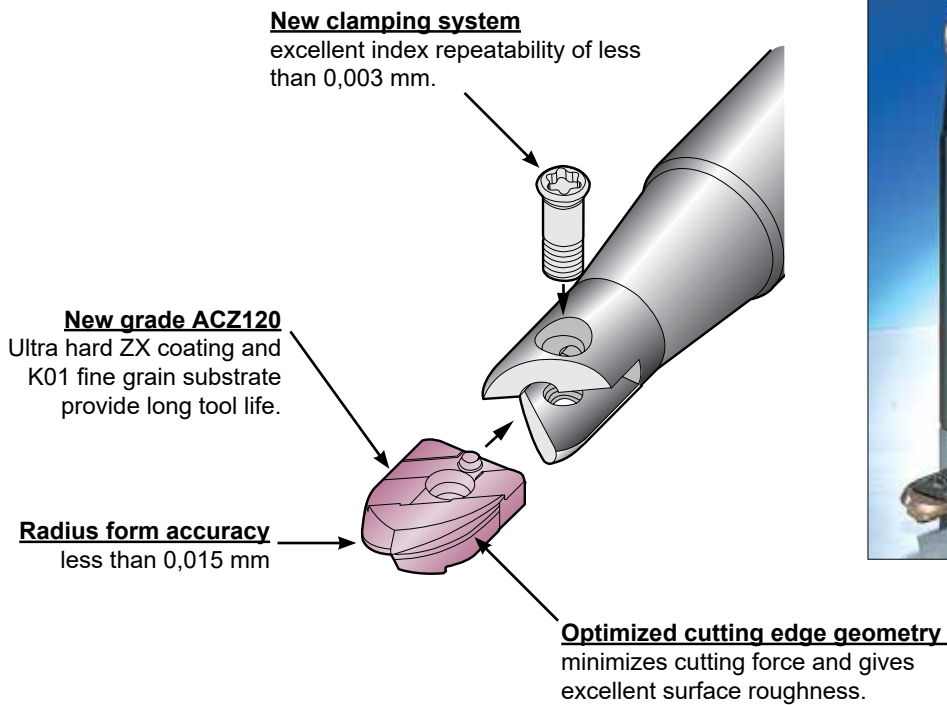

## ■ Features

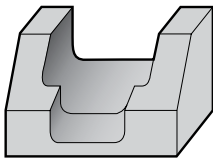

The outstanding results obtained from this finishing cutter are due to the combination of its large sigmoid blade and precise clamping system making it extremely rigid !

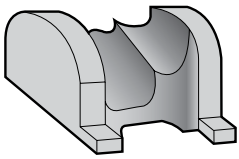

The WBMF achieves an excellent machined finish greatly reducing hand finishing and polishing operations.

- Advantages
- Unique rigid clamping system
  - Large sigmoid blade
  - Smooth cutting action
  - High quality machined surface
  - Ultra hard ZX coated cutting edge

## ■ Application Example

● Bumper Moulding Die Work Material : C55			<p>&lt;Results&gt; Surface roughness after continuous cutting for twelve hours was better than other manufacturer's product. Less width of flank wear was observed.</p>
WBMF1200M (ø20mm) Insert : ZPGU2471100 Grade : ACZ120	<p>Cutting Conditions  <math>v_c = 88</math> m/min  <math>v_f = 700</math> mm/min (<math>f_z = 0,25</math> mm/tooth)                      Width of Cut : 0,5 mm                      Depth of Cut : 0,5 mm                      Dry</p>		

● Bumper Moulding Die Work Material : C50			<p>&lt;Results&gt; Smooth cutting and good surface finish after continuous cutting for eight hours</p>
WBMF1200M (ø20mm) Insert : ZPGU2471100 Grade : ACZ120	<p>Cutting Conditions  <math>v_c = 190</math> m/min  <math>v_f = 1200</math> mm/min (<math>f_z = 0,21</math> mm/tooth)                      Width of Cut : 0,2 mm                      Depth of Cut : 0,2 mm                      Dry</p>

# "Wave Mill" Series

## WFXC Type

Expansion

### General Features

The WaveMill WFXC type is a chamfering tool that uses inserts for the WFX series. This allows the WFXC type to support many types of work materials using a variety of grades.

### Application Notes

Since chamfering uses the straight cutting edge portion of the insert, the range that can be chamfered will change depending on the corner radius (RE) of the insert that is attached to the body.

Work diameter: Use in a range greater or equal to DC1 and less than or equal to DC2.

Depth: The workpiece can be chamfered from „a“, which is the distance from the tip of the tool to the straight cutting edge at the depth indicated by „b“.

# Alnex ANX Series

Expansion

## ■ Features

- **Drastically Reduced Runout Adjustment Time**  
Simple screw-fastening structure enables fine adjustments to be made easily.
- **Blade Through Coolant**  
Secures a supply of coolant to the cutting edge and breaks chips thoroughly.
- **Lightweight Aluminum Alloy Body**  
Utilizing aluminum alloy to achieve a total weight of less than 1,3 kg for a Ø 125 mm cutter with 22 teeth.

## ■ Product Range

## ■ Edge Selection Guide

- **Reduces Running Costs by Drastically Increasing Blade, Insert Regrinding Allowance (to 1,0 mm)**

Assuming 0,2 mm of regrinding each time, an edge can be used up to 6 times. (Peripheral edge cannot be reground.)

If you wish to use reground blades you shall use sets of blades with matching size of the same level in order to keep the balance.

## ■ Performances

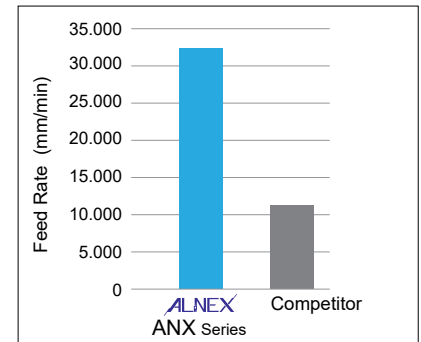

### ● High-Speed / High-Efficiency Cutting

Realizes ultra-high efficiency machining with  $v_f = 30.000$  mm/min

Comparison: Cutter Diameter  $\varnothing$  100 mm

	Spindle Speed min <sup>-1</sup>	Number of Teeth	Feed Rate $v_f$ (mm/min)
ANX Series	18.000	18	32.400
Competitor	9.500	12	11.400

### ● Drastically Reduces Runout Adjustment Time

- Simple screw-fastening structure
- Enables fine adjustments to be made easily
- High-rigidity body

### ● Chip Control

### Blade-Through Coolant Chip Breaking

ALNEX ANX Series

Competitor

Work Material: G-AlSi12Cu  
Cutting Conditions:  $v_c = 2500$  m/min,  $f_z = 0,05$  mm/t,  $a_p = 0,5$  mm, wet

## ■ Adjustment of the Blades, Runout Alignment

Insert the blade into its seat.

While holding the blade against the seat, install the clamping bolt using the provided wrench, pre-tightening the bolt. (recommended pre-torque is 1 N·m)

Using the provided wrench for the height adjustment screw, set the height to your predetermined value.

Fully tighten the clamp bolt. (recommended torque is 2 N·m)

# Alnex ANXS 16000 E

# GSX MILL Series

## ■ Characteristics and Applications

- ⊗ Wide variation of three flute types and four flute lengths enable use in a wide variety of applications.
- Fine carbide substrate provides high transverse rupture strength and excellent thermal shock resistance improving reliability in wet cutting applications.
- GSX Coating provides improved reliability and longer tool life.
- Large rake angle and unique flute design improve sharpness and chip evacuation.
- Cutting teeth with gash land improves corner flute strength.
- Sharper edge S type and fracture resistant C type added to the 2D size series.

## ● Wear Resistance

## ● Thermal Resistance

## ● Improved Chip Evacuation

## ■ 2 cutting edge designs expand machining applications

Sharper edge S type and fracture resistant C type added to the 2D size series.

Note: In gash land drilling, some material remains as shown on the right. If you need sharp corners, use the S Type.

Ex.: Corner on a  $\phi$  10 mm hole (mm)

## ■ Application Range

P					H			M	S	K	N			
General Structure	Rolled Steel	Carbon Steel	Alloy Steel	Pre-hardened Steel	Hardened Steel			Stainless Steel	Ti Alloy	Heat Resistant Alloy	Cast Iron	Al Alloy	Cu Alloy	Graphite
					Tempered Die Steel	45 ~ 55 HRC	55 ~ 60 HRC							
○	○	○	○	○	◎		◎	○	○	○				
					*1									

◎ : Best  
○ : Good

Blank : Not recommended  
\*1: GSXSLT30000C is recommended for 50 HRC or less

## ■ Recommended Milling Examples

Application	Surface Milling		Grooving		Groove Finishing	
	Rough	Finishing	Rough	Finishing	Rough	Finishing
Form						
<b>S Type</b>		○		○		○
<b>C Type</b>	○	○	○	○	○	○

S Type is best for removing inside corners.

\*2: Use with small depth of cut.

# NEW "Global Standard" Endmills GSX MILL Series

Large rake angle and unique flute design improve sharpness and excellent chip evacuation.

## Product Range

Application	No. of Teeth	Flute Length				
		1,5 D	2 D		3 D	4 D
		C Type	S Type	C Type	C Type	C Type
General Purpose	2 Flutes	GSX20000C-1.5D ⇨ J 7	GSX20000S-2D ⇨ J 8	GSX20000C-2D ⇨ J 9	GSX20000C-3D ⇨ J 10	GSX20000C-4D ⇨ J 11

Compound Endmilling	3 Flutes	GSXSLT30000C-1.5D ⇨ J 14				

## Multi-Purpose "GSX-SLT" Slot Type

- Optimized flute design of slotted 3 flute (1.5D) short type reduces cutting resistance.

- Allows drilling and slot milling and other continuous (compound) applications.
- Perfect for use with thin sheets and small machining centres

## Application Examples

### Carbon Steel Grooving with GSX20000C

GSX 20000C	Competitor	Gash land for stronger cutting edge.
<p>Tool dimension: <math>\varnothing 6</math> (2 Flutes)            Work material: C50            Cutting speed: <math>v_c = 87</math> m/min  <math>n = 4615</math> rpm            Feed rate: <math>f_z = 0,06</math> mm/teeth  <math>v_f = 553</math> mm/min            Depth of cut: <math>a_p = 3</math> mm            Wide of cut: <math>a_e = 6</math> mm            Cooland: Dry            Vertical machining centre (BT50)</p>		
<b>Breakage</b>		

### Cast Iron Grooving with GSX20000C

GSX 20000C	Competitor	GSX coating for improved wear resistance.
<p>Tool dimension: <math>\varnothing 10</math> (2 Flutes)            Work material: GGG60            Cutting speed: <math>v_c = 66</math> m/min  <math>n = 2100</math> rpm            Feed rate: <math>f_z = 0,072</math> mm/teeth  <math>v_f = 302</math> mm/min            Depth of cut: <math>a_p = 5</math> mm, 5 passes            Wide of cut: <math>a_e = 10</math> mm            Cooland: Dry            Vertical machining centre (BT40)</p>		
<b>High Wear</b>		

### Stainless Steel Machining with GSX20000C

GSX 20000C	Competitor	Improved reliability even under wet machining.
<p>Tool dimension: <math>\varnothing 10</math> (2 Flutes)            Work material: X5 CrNi 1812            Cutting speed: <math>v_c = 50</math> m/min  <math>n = 1591</math> rpm            Feed rate: <math>f_z = 0,04</math> mm/teeth  <math>v_f = 27</math> mm/min            Depth of cut: <math>a_p = 10</math> mm            Wide of cut: <math>a_e = 0,5</math> mm            Cooland: Wet            Vertical machining centre (BT50)</p>

# GSX MILL Series

⇨ J 20, J 21

## GSX MILL Anti-vibration Type (Square/Radius)

### ■ Characteristics and Applications

- Optimized irregular pitch and lead affords:
  - Drastically improved chattering and fracture resistance !
  - Less cutting force Allows high-speed, high-feed cutting.
- Rounded lands greatly improve machined surface quality (from  $\phi 4$  and up).
- New fine-grained carbide substrate and special coating for better rigidity and thermal and wear resistance.

### ■ Product Range

#### GSX MILL Anti-vibration Square Type

Series	No. of Teeth	Serie	DC (mm)
<b>GSXVL4000-2.5D</b>	4 Flutes		$\phi 2 - \phi 20$ ⇨ J 20

#### GSX MILL Anti-vibration Corner Radius Type

Series	No. of Teeth	Serie	DC (mm)
<b>GSXVL4000-R-2.5D</b>	4 Flutes		$\phi 3 - \phi 20$ ⇨ J 21

### ■ Cutting Range

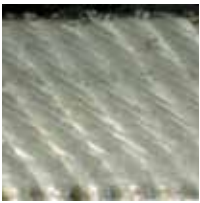

### ■ Cutting Resistance

### ■ Application Range

#### ● Surface Finish Quality

GSX Anti-vibration	Competitor's Anti-vibration	Conventional Design
		
No Chattering Clean Surface	Minute Chattering Poor Surface	Heavy Chattering Poor Surface
Work material: C50 Grooving: $\phi 10$ Tool dimension: $\phi 10$	Cutting Conditions: $n = 4.800 \text{ rpm}$ $v_f = 800 \text{ mm/min}$ $a_p = 10 \text{ mm}$ Equipment: BT50	

⇨ J 34

## GSX MILL Ball

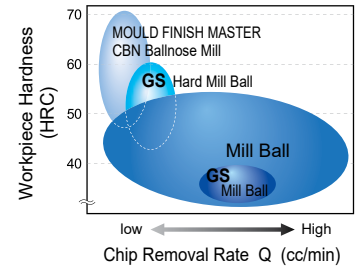

### ■ Characteristics and Applications

- New coating combined with a fine-grained carbide substrate affords better thermal and wear resistance.
  - Large helix angle on cutting edge reduces cutting resistance.
  - Unique pocket design and expanded pocket area promotes better chip evacuation.
- ☒ Expands the range of machineable material from soft to hardened steels, and offers reliability and longer tool life.

### ■ Product Range

Series	No. of Teeth	Serie	DC (mm)
<b>GSX-B 20000</b>	2 Flutes		$R=\phi 0,2 - \phi 15$ (DC= $0,2 - 30$ ) ⇨ J 36

### ■ Application Range

Recommended Cutting Conditions

- For stable machining performance use rigid, high-precision machines and holders.
- Use air blowing when dry machining.
- Use wet machining for stainless steel, heat resistant alloy, and titanium alloy applications.
- If the machine cannot achieve the recommended spindle speed, please use the max. spindle speed available.

Recommended Cutting Conditions

- For stable machining performance use rigid, high-precision machines and holders.
- Use air blowing when dry machining.
- Use wet machining for stainless steel, heat resistant alloy, and titanium alloy applications.
- If chattering is a problem, reduce the spindle speed and feed rate indicated in the table below by the same ratio, or reduce the depth of cut.
- If the machine cannot achieve the recommended spindle speed, please use the max. spindle speed available.

## Recommended Cutting Conditions

- For stable machining performance use rigid, high-precision machines and holders.
- Use air blowing when dry machining.
- Use wet machining for stainless steel, heat resistant alloy, and titanium alloy applications.
- In rare cases, chattering may occur in early milling stages, dissipating after 2m of cutting.
- If chattering is a problem, reduce the spindle speed and feed rate indicated in the table below by the same ratio, or reduce the depth of cut.
- If the machine cannot achieve the recommended spindle speed, please use the max. spindle speed available.

**GSX 2 0100 C - 4D**

Series Code No. of Teeth Diameter Cutting Edge Cutting Length

S: Sharp Edge  
C: Gash Land Drilling

Recommended Cutting Conditions

- For stable machining performance use rigid, high-precision machines and holders.
- Use air blowing when dry machining.
- Use wet machining for stainless steel, heat resistant alloy, and titanium alloy applications.
- In rear cases, chattering may occur in early milling stages, dissipating after 2 m of cutting.
- If chattering is a problem, reduce the spindle speed and feed rate indicated in the table below by the same ratio, or reduce the depth of cut.
- This series is not recommended for grooving.
- If the machine cannot achieve the recommended spindle speed, please use the max. spindle speed available.

### Recommended Cutting Conditions

- For stable machining performance use rigid, high-precision machines and holders.
- Use air blowing when dry machining.
- Use wet machining for stainless steel, heat resistant alloy, and titanium alloy applications.
- Use step machining of 0.1Dc when drilling stainless steel, heat resistant alloy, and titanium alloy.
- If the machine cannot achieve the recommended spindle speed, please use the max. spindle speed available.

## Endmill Identification (GSX MILL Series)

# GSX 4 1000 S - 2D

Series Code    No. of Teeth    Diameter    Cutting Edge    Cutting Edge Length

S: Sharp Edge  
C: Gash Land Drilling

## Recommended Cutting Conditions

- For stable machining performance use rigid, high-precision machines and holders.
- Use air blowing when dry machining.
- Use wet machining for stainless steel, heat resistant alloy, and titanium alloy applications.
- If chattering is a problem, reduce the spindle speed and feed rate indicated in the table below by the same ratio, or reduce the depth of cut.
- This series is not recommended for grooving.
- If the machine cannot achieve the recommended spindle speed, please use the max. spindle speed available.

## Endmill Identification (GSX MILL Series)

# GSX 4 0100 C - 2D / 3D

Series Code    No. of Teeth    Diameter    Cutting Edge    Cutting Edge Length

S: Sharp Edge  
C: Gash Land Drilling

## Recommended Cutting Conditions

- For stable machining performance use rigid, high-precision machines and holders.
- Use air blowing when dry machining.
- Use wet machining for stainless steel, heat resistant alloy, and titanium alloy applications.
- In rear cases, chattering may occur in early milling stages, dissipating after 2 m of cutting.
- If chattering is a problem, reduce the spindle speed and feed rate indicated in the table below by the same ratio, or reduce the depth of cut.
- If the machine cannot achieve the recommended spindle speed, please use the max. spindle speed available.

■ Recommended Cutting Conditions

- For stable machining performance use rigid, high-precision machines and holders.
- Use air blowing when dry machining.
- Use wet machining for stainless steel, heat resistant alloy, and titanium alloy applications.
- If the machine cannot achieve the recommended spindle speed, please use the max. spindle speed available.

## ■ Features

- Solid endmill EPMS-Series (**Ex Press Mill S**) for high-performance milling applications
- Higher efficiency and tool life due to new technology of latest developed carbide substrate and coating combined with the new optimized tool design
- Available with 4/5/6 flutes, different diameters and edge radii
- Excellent performance in machining of exotic alloys like Ti-alloys, super alloys and heat resistant steels
- Suitable for Titanium structure parts for airplane
- Anti-vibration design for reliable and efficient machining in a wide application range

## ■ Anti-Vibration Design

Reduce the vibration dramatically, especially for poor clamping and thin wall geometry, increase the parts accuracy and tool life for customers

## ■ Optimized Flute Geometry

Smooth chip evacuation is realized to ensure stable and safe milling process for customers.

## ■ Comparison with other Milling Cutters

#### Ramping

# SSEH Series

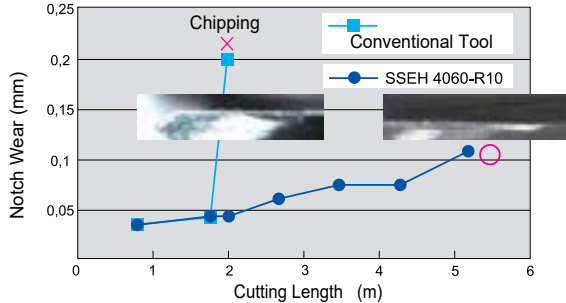

## SSEH Radius

### ■ Characteristics and Applications

- Steep helix (45° helix) improves sharpness.
- Combination of unique flute design and semi-mirrored surface improves chip evacuation and adhesion resistance.
- Ultra-smooth coating with improved hardness and heat resistance combined with tough carbide substrate improves tool life when working with heat resistant alloys.
- Unique, smooth radius shape mitigates cutting impact and improves fracture resistance.
- Both coated and uncoated types are available in stock to meet various conditions.

### ■ Application Examples

#### ● Inconel 718 (Side Milling)

Tool Diameter:  $\varnothing 6 \times R1$   
 Cutting Conditions:  $v_c = 20 \text{ m/min}$ ,  $f_z = 0,025 \text{ mm/t}$ ,  
 $a_p = 5 \text{ mm}$ ,  $a_e = 0,5 \text{ mm}$ , wet

#### ● Inconel 713 (Side Milling)

SSEH 4100W-R10	Competitor's Product
Tool Diameter : $\varnothing 10 \times R1$ Cutting Conditions : $v_c = 32 \text{ m/min}$ , $f_z = 0,018 \text{ mm/t}$ $a_p = 20 \text{ mm}$ , $a_e = 0,8 \text{ m}$ , Dry	

In Sumitomo Electric Hardmetal tests, the special coating with excellent adhesion resistance provided less cutting edge adhesion than the competitor's product and enabled fracturefree machining. The competitor's product suffered from edge adhesion leading to breakage.

Unique, smooth radius design

- = Euro stock
- = Japan stock

## SSEH Radius Anti-vibration Type

### ■ Characteristics and Applications

- New anti-vibration type added to the SSEH type endmill for exotic alloys.
- Builds on the same features of existing endmills by adding an irregular lead for exceptionally good anti-vibration performance.
- Compatible with wide range of milling for exotic alloys including SUS, Inconel, and titanium.
- Reduces chattering for high-speed, high-feed cutting.
- Both coated and uncoated types are available in stock to meet various conditions.

### ■ Application Examples

#### ● Surface Roughness Comparison

##### SSEH Anti-vibration Type

Good Surface Quality

Ra 0,37  $\mu\text{m}$  Rz 1,86  $\mu\text{m}$

##### Conventional Tool

Surface shows chattering

Ra 1,52  $\mu\text{m}$  Rz 6,45  $\mu\text{m}$

Work Material:

X5CrNi1810 (Surface Milling)

Tool Diameter:

$\varnothing 12 \text{ mm}$

Cutting Conditions:

$n = 1.300 \text{ rpm}$ ,  $v_f = 300 \text{ mm/min}$

$a_p = 18 \text{ mm}$ ,  $a_e = 1,2 \text{ mm}$

### Recommended Cutting Conditions

- For stable machining, a more rigid machine is recommended.
- Wet machining is recommended for stainless steel and heat resistant alloy applications.
- If cutting noise and vibration are present, please change the cutting conditions accordingly.

# DLC (Diamond Like Carbon) Schafffräser mit AURORA-Beschichtung

## ■ Eigenschaften

Sumitomos neue Sorte DL1000 mit „AURORA“-Beschichtung „Diamond Like Carbon“ (DLC) ist eine ultra dünne, diamant-ähnliche Beschichtung.

Bedingt durch extrem niedrige Reibungskoeffizienten und geringe Schneidkantenverrundung eignet sich diese Beschichtung besonders zur Bearbeitung von Aluminiumlegierungen und NE-Metallen. Auch Trockenbearbeitung ist möglich.

## ■ Vorzüge / Anwendung

- Die DLC-Beschichtung minimiert Grat- und Aufbauschneidenbildung wodurch hohe Oberflächengüten am Werkstück erzielt werden.
- Ein feinkörniges Grundsubstrat und hohe Schichthftung garantieren hohe Schneidkantenstabilität und Verfahrenssicherheit auch bei der Schruppbearbeitung.
- Lieferbar in Eck-/Nutenfräser mit 2 und 4 Zähnen auch in Typ von Kugelbahnschafffräser.

## ■ Produkt-Serie

Serie	Zähnezahl	Abbildung	Durchmesser
ASM2000DL	2	Schafffräser 	ø 2 – ø 16
ASM4000DL	4	Schafffräser 	ø 2 – ø 16
SNB2000DL	2	Kugelbahnschafffräser 	ø 2 – ø 16 (R1 – R8)

## ■ Empfohlene Schnittbedingungen

Empfehlung:

- (1) Durch eine stabile Maschine ist eine Hochleistungszerspanung gewährleistet.
- (2) Wenn während der Bearbeitung übermäßige Vibrationen oder starke Geräusche auftreten, sollten die Geschwindigkeiten und Vorschübe reduziert werden.
- (3) Bei auftretendem Rattern sollten zunächst die Schnittdaten überprüft werden.

# Hocheffizienter Schafffräser SSUP - Typ

## Eigenschaften

ZX-beschichteter universeller Vollhartmetallschafffräser für wirtschaftliches Nut- und Schulterfräsen von rostfreien und hitzebeständigen Stählen und Gußeisen.

Das einzigartige Design in Verbindung mit stabilen Schneidkanten ermöglicht sehr gute Spanabfuhr sogar beim Schruppfräsen von Nuten.

Vorschub bis zu 2000 mm/min mit und ohne Kühlmittel.

## Vorzüge

- Einzigartige Spannform ermöglicht exzellente Spanabfuhr
- Sehr stabile und bruchsichere Schneidkante
- 40° Drallwinkel ermöglicht sehr hohe Vorschübe
- Lange Standzeit durch hohe Verschleißfestigkeit
- Weicher Schnitt
- Hohe Steifigkeit durch das einzigartige Design

### ■ Vorzüge / Anwendung

- Die DLC-Beschichtung minimiert Grat- und Aufbauschneidenbildung wodurch hohe Oberflächengüten am Werkstück erzielt werden.
- Ein feinkörniges Grundsubstrat und hohe Schichthaftung garantieren hohe Schneidkantenstabilität und Verfahrenssicherheit auch bei der Schruppbearbeitung.

### Eigenschaften / Anwendung

- Zur stabilen Bearbeitung wird eine Maschine mit hoher Steifigkeit empfohlen.
- Für Anwendungen in rostfreiem Stahl und hitzebeständigen Legierungen wird die Nassbearbeitung empfohlen.
- Beim Auftreten von Schneidgeräuschen und Vibration sollten Sie die Schnittbedingungen entsprechend ändern.

# SUMIBORON "Helical Master" BNES - Typ

CBN-Schafffräser für Gehärteten Stahl

## Schafffräser BNES-Typ mit gedrahter CBN-Schneide

Bezeichnung	Lager	Abmessungen (mm)				
	BN350	DC	DMM	APMX	LU	LF
BNES 1060	○	6,0	10	7,0	11	60
1080	○	8,0	10	10,0	14	70
1100	○	10,0	12	12,0	17	75
1120	○	12,0	12	14,0	20	80
1140	○	14,0	16	16,0	21,5	80

## Empfohlene Schnittbedingungen

Schnittgeschwindigkeit:  $v_c$  (m/min), Umdrehung:  $n$  (U/min), Vorschub pro Zahn:  $f_z$  (mm/Zahn), Tischvorschub:  $v_f$  (mm/min)

Anwendungsbeispiel	DC	Gehärteter Stahl (H <sub>R</sub> C 50–57)			Gehärteter Stahl (H <sub>R</sub> C 58–65)		
		$v_c = 100-170$ m/min			$v_c = 80-150$ m/min		
<p>Schnitttiefe : <math>a_p \leq D</math></p>	6–8	$a_e \leq 0,1$ mm	$n = 4000-9000$	$V_f$ (mm/min) = 240–540	$a_e \leq 0,08$ mm	$n = 3200-8000$	$V_f$ (mm/min) = 150–370
	10–12	$a_e \leq 0,15$ mm	$n = 2700-5400$	$V_f$ (mm/min) = 180–360	$a_e \leq 0,12$ mm	$n = 2100-4800$	$V_f$ (mm/min) = 120–270
	14–16	$a_e \leq 0,2$ mm	$n = 2000-3800$	$V_f$ (mm/min) = 140–260	$a_e \leq 0,15$ mm	$n = 1600-3400$	$V_f$ (mm/min) = 110–230

Empfohlen wird Trockenbearbeitung (Luftkühlung)  
Gleichlaufräsen  
mit kurzem Überhang der Schneide  
in stabilen Maschinen

## Leistung

### ● Verschleißfestigkeit im Vergleich

Werkstückstoff: X155CrVMo12-1  
Härte: H<sub>R</sub>C 60  
Schnittdaten:  
 $v_c = 100$  m/min (**Helical Master**)  
 $v_c = 40$  m/min (Beschichteter VHM-Schafffräser des Wettbewerbs)  
 $v_f = 186$  mm/min  
Gleichlauf- und Trockenbearbeitung

### ● Oberflächengüte im Vergleich

„Helical Master“ BNES 1080  $\phi$  8,0

Mit herkömmlichem geradegenutetem CBN-Schafffräser,  $\phi$  8,0

Werkstückstoff: 15Cr3  
Härte: H<sub>R</sub>C 55–58  
Schnittdaten:  $v_c = 130$  m/min  
 $v_f = 310$  mm/min  
Gleichlauf- und Trockenbearbeitung

● = Eurolager  
○ = Japanlager

■ Schaftfräser

■ Vorzüge / Anwendung

- Hochpräzisionsbearbeitung von gehärtetem Stahl (~ HRC70) mit einer hohen Standzeit
- Extrem zähe Sorte SUMIBORON BN350 verhindert Schneidkantenausbröckelung
- RE - Genauigkeit: ±0,005 mm

Wichtige Hinweise

- (1) Durch eine stabile Maschine ist eine Hochleistungszerspannung gewährleistet.
- (2) Luftkühlung oder MMS (Minimalmengenschmierung) wird empfohlen.
- (3) Möglich kürzere Ausladung halten, um Vibration zu vermeiden.

### Empfohlene Schnittbedingungen

- Nutzen Sie hochsteife Maschinen zur Erzielung guter Ergebnisse.
- Luftkühlung oder MMS (Minimalmengenschmierung) empfohlen. Als MMS-Sprühnebel oder als externes Schmiermittel zuführen. Brandschutzmaßnahmen treffen, um Brandgefahren durch Funkenbildung bei der Bearbeitung oder durch Bruch des Werkzeugs zu vermeiden.
- Werkzeugauskragung so weit wie möglich reduzieren.
- Schnittbedingungen an Stabilität der Maschine und andere Bedingungen anpassen.
- In der Tabelle angegebene Werte zeigen maximale Schnitttiefen. Die tatsächliche Schnitttiefe und Schnittbreite an die gewünschte Oberflächengüte anpassen.

### Bezeichnungsschlüssel

### Empfohlene Schnittbedingungen

- Für eine stabile Schnittleistung eine Maschine mit hoher Stabilität verwenden.
- Nicht-wasserlösliches Kühlmittel empfohlen. Als Kühnebel oder externes Kühlmittel zuführen. Brandschutzmaßnahmen treffen, um Brandgefahren durch Funkenbildung bei der Bearbeitung oder durch Bruch des Werkzeugs zu vermeiden.
- Werkzeugüberhang so weit wie möglich reduzieren.
- Schnittbedingungen wie erforderlich anpassen, da sich die Stabilität der Maschine und andere Bedingungen verändern können.
- In der Tabelle angegebene Schnitttiefen sind als maximale Tiefenangaben zu verstehen. Die tatsächliche Schnitttiefe an die gewünschte Oberflächengüte anpassen.

# Multi-Drill Series

## ■ General Features

MultiDrill series is Sumitomo's original brand of high performance drills that have a special cutting edge design coupled with an advance carbide substrate.

The series has a comprehensive selection of diameters and drill lengths to cover a wide range of work materials and requirements, providing high efficiency, high precision and cost effectiveness.

# Multi-Drill Series

## Advantages

- Unique curved flute design with proven enhanced chip formation and removal, resulting in better hole accuracy.
- High speed and high efficient drilling is made possible with the combination of a special substrate with an advanced PVD coating. (10x tool life of HSS drills, 5x the efficiency)
- Wide selection range (Diameter: 0,03–65 mm, Drilling depths L/D: 2–30)
- Other diameters and length can be asked and offered

# SumiDrill Power Series SDP Type (DIN)

AlCrTiN Coated Solid Carbide Drills to DIN 6537

## General Features

New designed double margin  
Excellent hole accuracy

Shank

DIN 6535 HAK

Sumi-Power Coating

Excellent wear resistance  
and anti-adhesion

Elliptical flute design

Improved chip formation  
and chip evacuation

Curved cutting edge,  
optimized edge preparation

Low cutting force

Coating Structure

Improved anti-adhesion  
AlCrTiN lubricant layer  
coating with high Al content  
improves friction condition.

High wear resistance  
Tough and hard  
AlCrTiN super multilayer

Substrate

Stock Size

Ø 3,0 – Ø 12,0  
Increment 0,1 mm

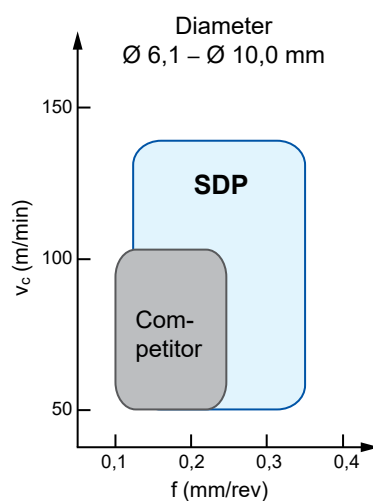

Ø 12,1 – Ø 16,0  
Standard diameter

## Advantages

- The specific and optimum solution for a wide range of application conditions
- Top performance parameters, maximum feed and stable long tool life
- Double margin design for high-precision holes
- Good balance of high wear resistance and toughness
- Curved cutting edge - ideal for removing chips
- Reliable and high productivity performance

## Application Range

## Maximum Feed Rate Result

Feed Rate (mm/rev)	0,30	0,40	0,50	0,55	0,60	0,65	0,70	0,75	0,80

○ Suitable

◎ Possible

### SDP-Identification

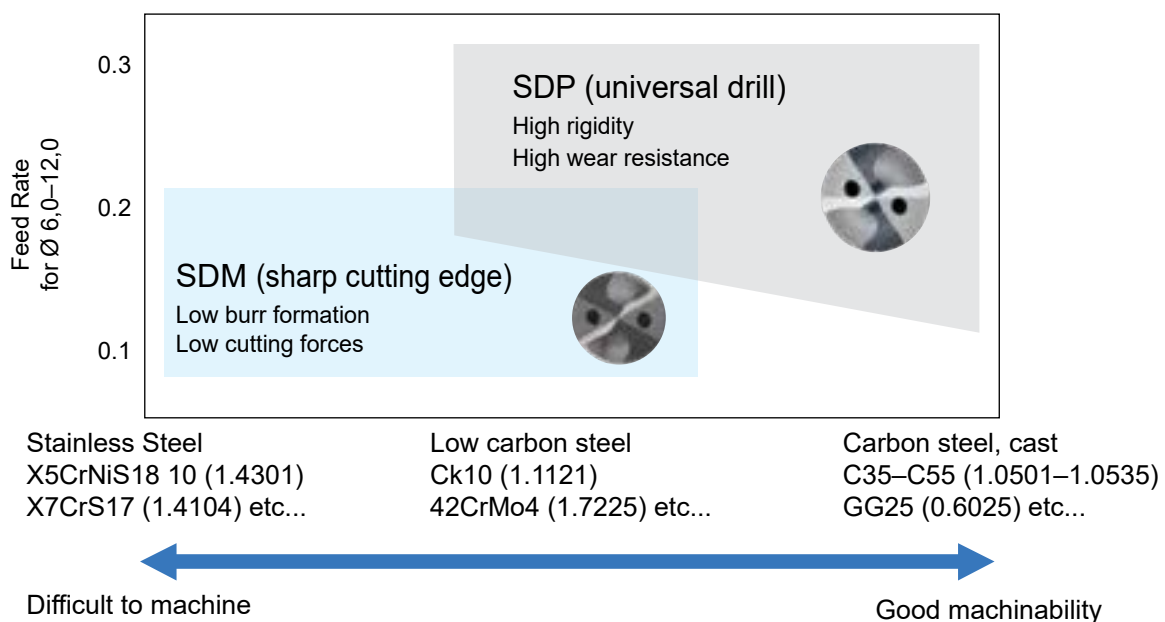

# SumiDrill Power Series SDM Type

## General Features

## Advantages

- High process reliability in stainless steel and low carbon steel
- Can be used on low-performance machines! (→avoids overload!)
- High surface quality in the bore
- Sharp cutting edge
- High adhesion resistance by Sumi-Power Coating

# SumiDrill Power Series SDM Type

## ■ Chip Control

Drill:	Ø 8 mm, L/D = 5
Work Material:	X5CrNiS18 10 (1.4301)
Cutting Data:	$v_c=60\text{m/min}$ , $f=0,10\text{mm/rev}$ , $a_p=19\text{mm}$ Internal coolant (2,0MPa)

### SDM

Short chips,  
good chip evacuation

### Competitor A

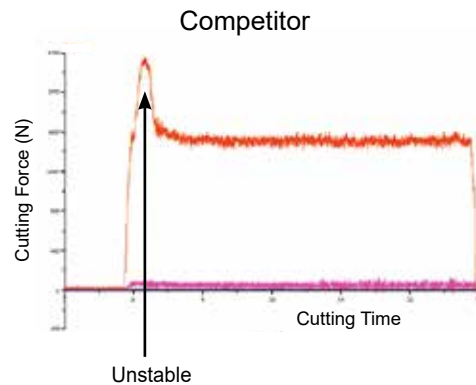

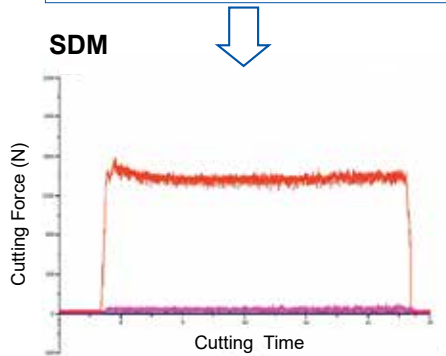

Partial long chips,  
risk of tool breakage  
by poor chip evacuation

## ■ Optimal Cutting Forces

Drill:	Ø 8 mm, L/D = 5
Work Material:	X5CrNiS18 10 (1.4301)
Cutting Data:	$v_c=60\text{m/min}$ , $f=0,20\text{mm/rev}$ , $a_p=40\text{mm}$ Internal coolant (2,0MPa)

10 % lower than competitor A

## ■ Low Burr Formation

Drill:	Ø 8 mm, L/D = 5
Work Material:	X5CrNiS18 10 (1.4301)
Cutting Data:	$v_c=60\text{m/min}$ , $f=0,20\text{mm/rev}$ , $a_p=40\text{mm}$ Internal coolant (2,0MPa)

# Drill Coating

## DEX Coating

### General Features

- Sumitomo Electric Hardmetal's next-generation drill coating utilises nano-coating technology to provide more than double the tool life of conventional coatings.
- Silicon and chrome improve usure, heat, and adhesion resistance.
- New super multi-layered structure offers significantly improved chip resistance (coating strength).

### Characteristics

#### Coating Design

World's first combined super multi-layered coating is made from alternate layers of super multilayered substrates.

#### Characteristics of Films

### DEX Coat Application Examples

#### MultiDrill GS Type Drilling Examples

Comparison of Usure Resistance		Comparison of Adhesion Resistance	
<p>Edge Usure Comparison for 70 m Drilling</p> <p>Shoulder and rake face feature improved usure resistance enabling long tool life.</p> <p>DEX Coating MultiDrill GS Type</p> <p>Concurrent A Drill</p>		<p>Edge Usure Comparison for 100 m Drilling</p> <p>Offers significantly improved fracture resistance to counter problems caused by shoulder and flute adhesion in soft steel drilling.</p> <p>DEX Coating MultiDrill GS Type</p> <p>Competitor B Drill</p>	
Tool:	MDW 0800 GS4	Tool:	MDW 0600 GS4
Work Material:	C50 (HB200)	Work Material:	15CrMo5 (HB120)
Cutting Conditions:	$v_c = 70$ m/min, $f = 0,25$ mm/rev, $a_p = 32$ mm External coolant (Water soluble)	Cutting Conditions:	$v_c = 60$ m/min, $f = 0,18$ mm/rev, $a_p = 18$ mm External coolant (Water soluble)

#### Long MultiDrill XHT Type Drilling Examples

<p>Reduced margin usure during deep hole MQL drilling increases number of regrinds.</p> <p>DEX Coating</p> <p>Conventional Coating</p>	
Tool:	MDW 0497 XHT20 (Ø 4,97 L/D = 29)
Work Material:	42CrMo4 (HB275) Crank Shaft
Cutting Conditions:	$v_c = 70$ m/min, $f = 0,23$ mm/rev, $a_p = 75$ mm MQL

#### MultiDrill SMD Type Drilling Examples

<p>Offers longer tool life with SEC MultiDrills as well.</p> <p>Number of holes</p> <p>DEX Coating: 1,150</p> <p>Conventional Coating: 800</p> <p>1,4x Life!</p>	
Tool:	SMDH 210 M (Ø 21,0)
Work Material:	36Mn5 (HB350) Construction Mashine Component
Cutting Conditions:	$v_c = 60$ m/min, $f = 0,25$ mm/rev, $a_p = 25$ mm Water soluble Coolant

## General Features

Super MultiDrill GS types are solid carbide drills that employ a new flute design and wide chip pocket to achieve excellent chip management and evacuation. DEX coating enables stable and long tool life over a wide range of work materials and applications.

## Characteristics and Applications

- Long tool life  
New cutting edge design and special DEX coating provide long tool life with a wide variety of work materials.
- Stable chip evacuation  
New flute shape significantly improves chip management and evacuation.
- Quiet cutting and stable cutting resistance  
Stable drilling with little wobble even in small machine applications.
- Environmentally-friendly  
Compatible with the MQL (Minimum Quantity Lubrication) system.

#### ■ How to Order

Non-Stock Items will be required minimum order quantity for 6 pcs.  
Please specify the Cat. No. For example, if the diameter of the drill is 10,2 mm, please indicate as follow.

E.g., **MDW 1020 GS 2/4, ACX70**  
(Grade)

SUPER MULTI-DRILLS

Drill diameter **10,2 mm**

Drilling depth (The ratio to ØD): **-2 / -4**

GS type MULTI-DRILLS

# Flat MultiDrill MDF Type

## Coated Carbide Drills for Spot Facing

### General Features

The flat MultiDrill MDF type is a solid carbide drill that can be used for various purposes including high-efficiency spot facing and drilling in inclined and curved surfaces.

### Advantages

- Can be used in a variety of drilling applications thanks to its point angle of 180°  
Applicable to high-efficiency spot facing, drilling in non-horizontal surfaces such as inclined and cylindrical surfaces and interrupted drilling. It also reduces burrs at hole exits.
- Improved machining stability  
Achieves high rigidity by employing RS THINNING, which ensures web thickness on the bottom face.
- Excellent chip evacuation performance  
Achieves excellent chip evacuation thanks to its wide chip pocket and high-quality rake face shape.
- Excellent cutting edge strength  
Achieves excellent cutting edge strength thanks to optimized cutting edge design.
- Expanded lineup of long type  
An expanded lineup of long type drills with diameters between  $\varnothing 3,0$  and  $\varnothing 20,0$  mm that are capable of drilling with an overhang length up to  $L/D = 10$ .
- Expanded lineup of types with oil hole  
Supports internal coolant. For deeper drilling (3D, 5D).

Improves drilling stability by ensuring web thickness.

### Reduction of Burrs at Hole Exit

Work Material: 15CrMo5  
Drill: MDF0500S2D ( $\varnothing 5,0$  mm, 2D)  
Cutting Conditions:  $v_c = 65$  m/min,  $f = 0,12$  mm/rev  
 $H = 10$  mm, 150 holes, wet  
Equipment: Vertical machining center

Reduces exit burrs by more than half compared to general-purpose drills

Burr height: 0,18 mm  
Flat MultiDrill MDF type

Burr height: 0,44 mm  
Conventional general type

### Applications

High-efficient spot facing

Hole expansion drilling

Drilling in non-horizontal surfaces (such as inclined and cylindrical)

Interrupted drilling

Cross drilling

Pre-tap hole drilling in thin sheets

Deep spot facing

Avoiding interference with work materials

## Long Type (L2D)

For flat base drilling in long overhang conditions, hole expansion, burr prevention.  
For deep flat base drilling and to avoid interference with workpiece.  
Drilling that uses the long shank type requires a guide hole of the same diameter or a centering hole larger than the tool diameter.

- Two types    (A)  $\varnothing DC < 6 \text{ mm}$     Stepped Shank Products  
                  (B)  $\varnothing DC \geq 6 \text{ mm}$     Relief Shank Products

## With Oil Hole (H3D Type / H5D Type)

Support for internal coolant allows for deeper flat hole drilling.  
Drilling that uses oil hole L/D = 5 requires a guide hole of the same diameter or a centering hole larger than the tool diameter.

### Deep Spot Facing

### Long Overhang Spot Facing

### Inclined Surface Drilling

### Controlling Burrs and Chips when Withdrawn

## Using Flat Drills, General-Purpose Drills and Endmills

Tool	Flat Drill MDF Type	General Purpose Drill GS/HGS Type	Endmill for Spot Facing GSX MILL Slot
Hole Bottom Shape			
Drilling in horizontal surfaces	⊙ Feed rate approximately half of a general-purpose drill	⊙ Optimal	✗ Within 1D, limited to low feed rate Feed rate one-fifth or lower of a general-purpose drill
Drilling in non-horizontal surfaces	⊙ Optimal (within 2D is recommended)	✗ Unusable	⊙ Within 1D, limited to low feed rate Feed rate half or lower of a flat drill
Traversing	✗ Unusable	✗ Unusable	⊙ Optimal

Grade: ACF75

Drilling that uses this tool requires a guide hole of the same diameter or a centering hole larger than the tool diameter.

### Recommended Cutting Conditions

#### ● MDF S2D Type

- The recommended hole depth is 2 x DC. The depth shall be the depth from the highest point of the hole when drilling inclined surfaces.
- The recommended cutting conditions are those for drilling in flat horizontal surfaces.
- Adjust the feed rate according to the inclination angle when drilling in an inclined surface.
  - Set the feed rate at ≤ 70% when the inclination angle is ≤ 30°
  - Set the feed rate at ≤ 50% when the inclination angle is > 30°
- This product is a drilling tool. Do not use it for traversing or helical milling

#### ● MDF L2D Type, Long Type

- Drilling that uses this tool requires a guide hole of the same diameter.
- The cutting conditions are the recommended conditions with a guide hole.
- The recommended hole depth is 5 x DC. The depth is measured from the highest point of the hole on drilling in inclined surfaces.
- This product is a drilling tool. Do not use it for traversing or helical milling.

### ■ Recommended Cutting Conditions

#### ● MDF H3D Type with Oil Hole

1. The recommended hole depth is 3 x DC. The depth is measured from the highest point of the hole on drilling in inclined surfaces.
2. The recommended cutting conditions are those for drilling on flat horizontal surfaces.
3. Adjust the feed rate according to the inclination angle when drilling in an inclined surface.
  - 3.1 Set the feed rate at ≤ 70 % when the inclination angle is ≤ 30°.
  - 3.2 Set the feed rate at ≤ 50 % when the inclination angle is > 30°.
4. This product is a drilling tool. Do not use it for traversing or helical milling.
5. A guide hole of the same diameter is recommended when drilling stainless steel.

#### ● MDF H5D Type with Oil Hole

1. Drilling that uses this tool requires a guide hole of the same diameter.
2. The cutting conditions are the recommended conditions with a guide hole.
3. The recommended hole depth is 5 x DC. The depth is measured from the highest point of the hole on drilling in inclined surfaces.
4. This product is a drilling tool. Do not use it for traversing or helical milling.

### ■ XGHS Series

Applications	Series	Diameter Range (mm)	Hole Depth (L/D)
Deep Hole Drilling	MDW0000XHGS12	Ø 3,0 – 12,0	-12
	MDW0000XHGS15	Ø 3,0 – 12,0	-15
	MDW0000XHGS20	Ø 3,0 – 12,0	-20
	MDW0000XHGS25	Ø 3,0 – 12,0	-25
	MDW0000XHGS30	Ø 3,0 – 10,0	-30
Pilot Hole Drilling	MDW0000PHT	Ø 3,0 – 12,0	-2

### ■ General Features

Super MultiDrill XHGS series is a next-generation drill for deep hole drilling, features stable chip control and improved strength to further enhance efficiency of deep hole drilling.

### ■ Characteristics and Applications

#### Low Cutting Resistance

The application of a new special thinning shape „RX thinning“ reduces cutting resistance during high efficiency drilling.

**RX**  
THINNING

#### Conventional Drill

#### XHGS Series

Work Material: C45  
Tools: MDW050XHT20 (conventional), MDW0500XHGS20 (Ø 5,0 mm, 20D)  
Cutting Cond.:  $v_c = 80$  m/min,  $f = 0,35$  mm/rev, ( $\Rightarrow$  at the time of entry penetration  $f = 0,08$  mm/rev),  $H = 90$  mm  
Coolant: MQL

#### Chip Control

New groove shape „J flute“ with improved chip control stability when drilling deep holes.

**J-flute**

XHGS Series

Conv. Drill

$f = 0,35$  mm/rev

$f = 0,40$  mm/rev

$f = 0,45$  mm/rev

Work Material: C45  
Tools: MDW050XHT20 (conventional), MDW0500XHGS20 (Ø 5,0 mm, 20D)  
Cutting Cond.:  $v_c = 80$  m/min,  $H = 90$  mm  
Coolant: MQL

Improved chip evacuation makes it possible to reduce spindle load fluctuation, ensuring stable, long tool life.

#### High Precision & Stability

The XHGS series provides excellent guide performance due to the unique design when compared to the conventional drill.

Conventional Drill

Excellent Guide Performance

XHGS Series

Recommended Cutting Conditions

Min. - Optimum - Max.

Drill Diameter DC (mm)	Cutting Conditions	Soft Steel (-200 HB)	General Steel (-250 HB)	Alloy Steel (-300 HB)	Hardened Steel (-40 HRC)	Cast Iron FC FCD

-Ø 10,0	v <sub>c</sub>	50-70-90	60-80-110	50-65-80	30-50-60	50-65-80
	f	0,20-0,25-0,30	0,20-0,25-0,32	0,15-0,20-0,25	0,10-0,15-0,20	0,25-0,28-0,35
-Ø 12,0	v <sub>c</sub>	60-80-100	60-90-120	50-65-80	40-55-70	50-65-80
	f	0,25-0,30-0,35	0,25-0,30-0,35	0,15-0,23-0,27	0,12-0,15-0,23	0,25-0,30-0,35

Note: Use lower speed when using MQL coolant and higher speed when using internal coolant.

V<sub>c</sub>: Cutting speed (m/min), f: Feed Rate (mm/rev)

Recommended Drilling Method

1. Drill a pilot hole using the dedicated PHT

Select the same nominal diameter for the dedicated pilot hole drill PHT type as the deep hole drill XHGS type. (The pilot drill diameter is designed +0,02 mm to +0,05 mm larger than the long drill diameter)

2. Enter the pilot hole at reduced cutting data

Rotation speed: 500 min<sup>-1</sup>  
Feed rate: 1000 to 2000 mm/min

Important:

DO NOT enter pilot hole at higher cutting data, this will cause damage to the drill.

3. Increase rotation speed until the set cutting speed is reached, and start normal drilling operation

When using a NC machine, only begin drilling operation once full rotation speed is reached.

4. After drilling rotation speed is reduced and the drill is retracted from the work material

Rotation speed: 500 min<sup>-1</sup>  
Feed rate: 1.000 to 2.000 mm/min

Retracting a drill from the work material at a high rotation speed is dangerous as doing so may result in breakage due to run-out.

5. Other Notes

A flat base should be prepared when the surface for the pilot tool is slanted. Spot face using:

When the deep hole drill exits through an angle surface, decrease the feed rate to f = 0,05 mm/rev just before drilling through.

Coolant

1. Internal coolant supply

Use suitable coolant / emulsion

Pump pressure: Steel: 1,5 to 2,0 MPa (cooling effect increases at higher pressure, affecting chips/wear)  
Cast iron & aluminium alloy: 4,0 to 6,0 MPa (priority on cooling)

2. Internal MQL

Airpressure: 0,5 MPa or higher

Discharge volume: It is recommended to set the maximum discharge volume possible on the machine.

\*Consult the manufacturer before using with aluminium alloy.

## ■ Characteristics

- High efficiency drilling  
AURORA COAT and strong helix design reduces cutting forces and improves edge sharpness.
- Precision drilling  
Special cutting edge design improves hole precision and quality.
- Longer tool life  
With AURORA COAT coupled with the cutting edge design, long and stable tool life can be achieved.
- Deep hole (L/D = 20) drilling  
Drills for deep hole drilling can be custom-made.  
Production range: Ø 3,0–16,0 mm  
total length: 50 times drill diameter (max. 290 mm)

## ■ Applicable Work Materials

- Aluminium Die Casting
- Aluminium Alloy
- Aluminium Alloy Casting
- Brass Casting
- Bronze Casting

AURORA Coated NHGS Type, Grade: DL1300

■ How to Order

Non-Stock Items will be required minimum order quantity for 6 pcs.

Please specify the Cat. No.

For example, if the diameter of the drill is 10,3 mm and the ratio to ØD is 5, please indicate as follow.

E.g.,

**MDW 1030 NHGS 5**, **DL1300** (Grade)

Super MULTI-DRILL

DC = 10,3 mm

Applicable work materials

with spiral coolant holes

Drilling depth (The ratio to ØD):  
-3 / -5 / -10

NHGS type Multi-Drills

# Micro Long Drills

## MLDH ...L/P Type

### ■ General Features

Micro Long Drills are oil-hole drills for high efficiency drilling that were developed for drilling deep, small-diameter holes. These next-generation, small-diameter hole drills feature improved strength - often a problem area with small-diameter drills.

### ■ Characteristics and Applications

- Deep-hole drilling  
New groove shape ensures good drill rigidity and chip evacuation.  
High efficiency drilling to depths of over 20 x drill diameter at over  $v_f = 500$  mm/min (drill diameter 1,3 mm, X12CrS13 equivalent).  
Optimal thinning and edge balance for stable chip control.
- Long tool life  
Special coating provides long tool life with a wide variety of work materials.  
Improved chip evacuation makes it possible to reduce spindle load fluctuation, ensuring stable tool life.

### ■ Series

Application	Type	Diameter Range (mm)	Hole Depth (L/D)
Guide Hole Drilling	MLDH □□□□ P	Ø 0,8 – 2,0	–2
Deep Hole Drilling	MLDH □□□□ L5	Ø 0,8 – 2,0	–5
	MLDH □□□□ L12	Ø 0,8 – 2,0	–12
	MLDH □□□□ L20	Ø 0,8 – 2,0	–20
	MLDH □□□□ L30	Ø 0,8 – 2,0	–30

### ■ MDSS Recommended Cutting Conditions (Wet)

Work Cond.	Alloy Steel, Pre-hardened Steel			Die Steel, Tempered Steel (HRC 30–40)			Stainless Steel		
	Drill-ø (mm)	Spindle (rpm)	Feed rate (mm/min)	Step-feed (mm)	Spindle (rpm)	Feed rate (mm/min)	Step-feed (mm)	Spindle (rpm)	Feed rate (mm/min)
Ø 0,2	26500	50	0,1D	21200	40	0,1D	10600	20	0,1D
Ø 0,3	26500	80		21200	60		10600	30	
Ø 0,4	25900	100		19900	80		9500	40	
Ø 0,5	25500	150		19100	110		9500	50	
Ø 1,0	15900	240		12700	190		5600	80	

- The above conditions are recommended under wet conditions, using water-soluble coolant.
- If machine noises and vibrations are present, please adjust the cutting conditions accordingly.
- If the machine cannot achieve the recommended spindle speed, please use the max. spindle speed available.

\* Step feed is recommended for drilling of holes deeper than 3xD.

# SUMIDIA Coated Drills

## SDC Type

MDS...SDC

### General Features

SUMIDIA Coated SDC type drills for Carbon Fibre Reinforced Plastic (CFRP) employ Sumitomo Electric Hardmetal's proprietary multi-step point angle.

Combined with a diamond coating, this technology improves the quality of machined surfaces and extends tool life.

### Characteristics and Applications

- Excellent drilled-hole quality
  - Sharp cutting edge shape reduces delamination of fibre layers and burrs.
  - Continuously changing point angle disperses load placed on cutting edge and prevents breakage.
- Long tool life
  - Use of high-strength diamond coating with excellent adhesion delivers high quality and long tool life.

### Performance

**Comparison of Machined Surface Finish**

Excellent Machined Face Quality  
(Prevents Delamination And Burrs)

	SDC	Concurrent A	Concurrent B	Concurrent C
Hole Entrance				
Hole Exit				

Tool: SUMIDIA coated drill SDC type,  $\varnothing$  6,375  
 Competitor A B C's drill  $\varnothing$  6,35 &  $\varnothing$  6,5  
 Work Material: CFRP  
 Cutting Conditions:  $n = 6.000$  rpm,  $f = 0,1$  mm/rev,  $a_p = 28$  mm (Through)  
 Dry

**Tool Life Comparison**

Effects of Diamond Coating

SDC type (After drilling 600 holes)	Competitor's product (After drilling 50 holes)
No delamination Low flank wear	More delamination from cutting edge to flank

Stable diamond layer adhesion prevents delamination.  
 Excellent wear resistance enables high-quality drilling with long tool life.

**Tool Life Comparison**

Tool	SDC	Competitor A's Diamond Coated Drill	Carbide Drill
Hole	0-600	0-100	0-100

Tool: SUMIDIA coated drill SDC type,  $\varnothing$  6,375  
 Competitor A B C's drill  $\varnothing$  6,35 &  $\varnothing$  6,5  
 Work Material: CFRP  
 Cutting Conditions:  $n = 6.000$  rpm,  $f = 0,1$  mm/rev,  $a_p = 28$  mm (Through)  
 Dry

# Replaceable Head Type MULTI-DRILLS SMD Type

## General Features

Fast accurate and ideal for drilling steels, this newly developed drill from SUMITOMO gives similar hole accuracy to that of regrindable drills renowned within the industry as being the ultimate hole making tool.

- ## Advantages
- Available in diameters ranging from 12,0–42,5 mm
  - Drilling Depths 1,5–12 x Diameter
  - Optimised heat dissipation via precisely located coolant holes
  - Maximised rigidity from newly developed clamping system
  - High performance drilling of precision holes from solid
  - 3 different types of head for general and smooth cutting (MTL type, MEL type) and new MFS type for drilling in non-flat surfaces.

The newly developed tungsten carbide substrate with its ultra hard smooth coating proved that against competition users can expect to see holes with tolerances similar to that of reaming and tool life almost doubled.

## Drilling Precision

## Application Example

# Replaceable Head Type Drill Holder

## SMDH Type

### ● Holder 3D / 5D / 8D

Shank Type:  
Whistle notch type

### ● Holder 1,5D

Shank Type:  
Weldon type

### ● Holder 12D

Shank Type:  
Cylindrical type

$l_2$  = Effective drilling length

## ■ Holder

# Regrindable Drill Head Insert SMDT... MEL Type

## Advantages

- Replaceable and regrindable drill head
- New design decreases cutting force by 25 %
- Ideal for stainless steels - soft steels etc
- Excellent tool life when drilling cast iron
- Improves drilling performance on low powered machines
- Increases productivity

## Performance (Stainless steel machining)

### Comparison of cutting force

### Chip comparison

## Performance (Cast iron machining)

### Comparison of cutting force

### Comparison of wear resistance

# Drill Head Insert SMDT... MFS Type

## MFS Type for Drilling in Non-Flat Surfaces

### MFS Type Ideal for Drilling in Non-Flat Surfaces and Less Burr

#### Advantages

- Various Drilling Operations Thanks to a Point Angle of 180°**  
 Applicable to high-efficiency spot facing, drilling in non-flat surfaces such as inclined and cylindrical surfaces and interrupted drilling.  
 Also reduces burrs at the hole exit.
- Improves Machining Stability**  
 Achieves high rigidity by employing RS Thinning, which ensures thick web at the bottom.

#### Holder

No flat face for side lock clamping on the shank of 12D holders.

#### Holder

	f	0,20-0,30-0,35	0,20-0,25-0,35	0,15-0,20-0,25	0,15-0,20-0,25	0,20-0,30-0,40	0,25-0,30-0,35	0,35-0,50-0,60

Note: The recommended hole depth is 2 x DC. The depth is measured from the highest point of the hole when drilling on inclined surfaces. The recommended cutting conditions above are for drilling on flat horizontal surfaces. Adjust the feed rate according to the inclination angle when drilling on an inclined surface. Set the feed rate at 70 % or lower when inclination angle is 30° or less. Set the feed rate at 50 % or lower when the inclination angle is larger than 30°. This product is a drilling tool. Do not use it for traverse or helical milling.

(\*) Inquire about drills specifically for aluminum alloy.

# Replaceable Head Type MULTI-DRILLS SMD Type

Large Hole MTL Type

For Large Holes

Tool edge design ideal for malleable material used for large casings, etc.  
Edge design suitable for malleable material commonly used for large hole drilling.

## ■ Machined Surface Accuracy

Work Material: St 52-3 (Base substrate for construction use)  
Drill Size: Ø 33,0 mm x 5D  
Cutting Conditions:  $v_c = 120$  m/min,  $f = 0,25$  mm/rev  
Cutting Environment: Emulsion Type

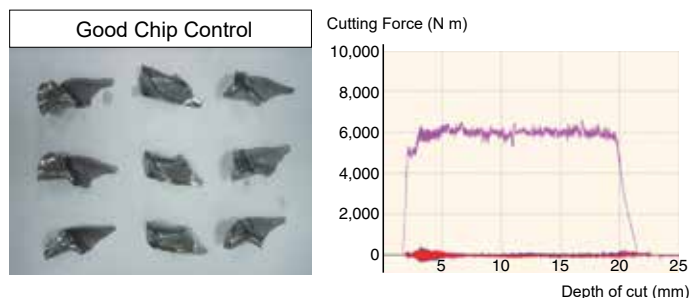

High drilling accuracy with large diameters

## ■ Cutting Force Comparison (Thrust)

Work Material: St 42-2 (Laminated plates)  
Drill Size: Ø 37,5 mm x 5D  
Cutting Conditions:  $v_c = 90$  m/min,  $f = 0,35$  mm/rev  
Cutting Environment: Emulsion Type

Stable even when machining laminated plates

## ■ Recommended Cutting Conditions

$v_c$ =Cutting Speed (m/min)  $f$ =Feed Rate (mm/rev)

Work Material	Recommended Head Drill Ø (mm)	Cutt. Conditions	Soft Steel (-250 HB)	General Steel (250-320 HB)	Hardened Steel (45 HRC)	Stainless Steel (-200 HB)	Grey Cast Iron	Ductile Cast Iron
			MTL Type	MTL Type	MTL Type	MTL Type	MTL Type	MTL Type
-36,5		$v_c$	60-120 (40-80)	60-120 (40-80)	40-80 (30-60)	40-80 (30-60)	50-100 (40-90)	50-90 (40-70)
		$f$	0,25-0,4	0,2-0,35	0,15-0,3	0,15-0,25	0,25-0,45	0,25-0,35
-42,5		$v_c$	60-120 (40-80)	60-120 (40-80)	40-80 (30-60)	40-80 (30-60)	50-100 (40-90)	50-90 (40-70)
		$f$	0,25-0,4	0,2-0,35	0,15-0,3	0,15-0,25	0,25-0,45	0,25-0,35

Note: Where machining and work clamp rigidity are good, conditions may be increased up to the maximum.  
For 8D drills, please use feed rates stated within the ( ). Before drilling 8D holes, a guide hole of similar diameter must be made.

# SumiDrill WDX Type

## General Features

The SumiDrill WDX type has excellent cutting balance that provides stable hole drilling on a wide range of work materials from general steel to stainless steel and aluminium alloy. Available in four original chipbreaker styles, the inserts feature improved chip control and reduced cutting force for use in low rigidity contexts.

## Series Configuration

Depth of Machined Hole	Holder Diameter (mm)
2D	Ø 13,0 – Ø 68,0
3D	Ø 13,0 – Ø 68,0
4D	Ø 13,0 – Ø 63,0
5D	Ø 13,0 – Ø 55,0

## Features and Applications

### Design

Cutting force during drilling is balanced between central insert and peripheral insert. The relative position of each insert is optimised to provide stable drilling.

### Excellent Chip Control

The chip evacuation direction can be controlled with the chip control groove at the centre of the breaker, enabling good chip control.

### Versatile Tool for a Variety of Machining Applications

Select among four types of breakers for different applications, allowing optimal drilling for a variety of work materials and conditions. Suitable for a wide range of applications including hole expansion, spot facing, external turning and internal boring.

### Economical Four-Cornered Insert

Inserts can be used in either central or peripheral positions with two corners for each position - a total of four corners.

## Multi-Purpose Functionality

# SumiDrill WDX Type

## Chipbreaker M Type / **ACM300** New For Machining of Stainless Steel

### ■ Features

Chip control by the newly developed M chip breaker for stainless steel machining achieves stable hole quality.

Holder	WDX M Type	WDX G Type	Competitor's Product
Hole			
Chips			

Work Material: X2CrNiMo17 13 2  
Holder: WDX200D3S25  
Insert: WDXT063006 M (ACM300)  
Cutting Data:  $v_c = 150$  m/min,  $f = 0,08$  mm/rev,  $H = 60$  mm, wet

## ACP100 For High-speed Drilling of Steel and Cast Iron

### ■ Features

Provides excellent wear resistance and high reliability thanks to our coating stress control technology and the ultra-fine crystal grain coating film of the Super FF Coat achieved through our proprietary technology.

	ACP100	Competitor's Product
Peripheral Insert	Rake Face	Rake Face
	Flank	Flank
Central Insert	Rake Face	Rake Face
	Flank	Flank

Work Material: C50  
Holder: WDX250D3S25  
Insert: WDXT063006 G (ACP100)  
Cutting Data:  $v_c = 200$  m/min,  $f = 0,12$  mm/rev,  $H = 50$  mm through hole, wet

## Drills for Deep Hole Drilling L/D = 5

### ■ Features

The SumiDrill WDX type for 5xD drilling features a specially designed flute shape and enlarged coolant hole for excellent chip evacuation even during hole drilling.

Large coolant hole

Coolant supply guidehole

Special flute shape for L/D = 5

### ■ Performance

Characteristics	Figure	Cutting Resistance	Machined Surface (Exit)
<p><b>WDX260D5S32</b> L/D = 5</p> <p>Flutedesign</p> <p>Designed with emphasis on chip evacuation</p> <p>Expanded flute design improves chip evacuation for stable drilling performance even with holes up to 5xD.</p>		<p>Amplitude in thrust direction is larger than flutes designed for up to 4xD, but drilling performance is stable even when drilling deep holes of 5xD.</p> <p>Thrust</p> <p>Horizontal component of force</p> <p>Depth L/D = 4</p> <p>Depth L/D = 5</p>	<p>Produces an excellent surface finish - full hole depth</p>
<p>Comparison Tool</p> <p>Flutedesign L/D = 4</p> <p>Designed with emphasis on drill rigidity</p> <p>Flute design for greater rigidity of the drill enables stable drilling of deep holes up to 4xD.</p>		<p>However, stable drilling up to 4L/D</p> <p>Chip blockage at bottom of hole</p> <p>Strong rigidity allows only minute amplitude in the thrust direction</p> <p>Depth L/D = 4</p> <p>Depth L/D = 5</p>	<p>Poor machined surface due to chip blockage at bottom of hole (near 5xD)</p>

Insert: WDXT073506-G Work Material: X5CrNiS18 10  
Cutting Data:  $v_c = 150$  m/min,  $f = 0,05$  mm/rev,  $H = 130$  mm, through hole, wet

						90–120–150	0,08–0,15–0,21	0,09–0,17–0,23	0,09–0,18–0,25	0,11–0,20–0,28
<b>S</b>	Exotic Alloy (Heat resistant alloy, Super Alloy, etc)		200	G	ACP300	25–50–70	0,05–0,09–0,11	0,05–0,09–0,11	0,06–0,09–0,12	0,06–0,10–0,14
<b>N</b>	Aluminium Alloy			G	DL1500	200–260–320	0,05–0,10–0,15	0,05–0,10–0,15	0,06–0,11–0,16	0,06–0,12–0,18
						180–230–280	0,05–0,10–0,15	0,05–0,10–0,15	0,06–0,11–0,16	0,06–0,12–0,18

\*For the P and K grades for which ACP300 and ACK300 are the first recommendation, ACP100 inserts are the second recommendation. The recommended cutting conditions are a cutting speed  $v_c$  of 130% of the above table and a feed rate  $f$  of 75%.

# SumiDrill WDX Type

## ■ Hole Profile

Bottom of hole after drilling with  
**WDX200D3S25**

Drill Diameter DC (mm)	a (mm)
Ø 13,0– Ø 18,0	0,4
Ø 18,5– Ø 28,5	0,6
Ø 29,0– Ø 36,0	0,8
Ø 37,0– Ø 55,0	1,2
Ø 56,0– Ø 68,0	1,4

Bottom of hole after drilling with  
conventional tool

Finishing is easy because the hole bottom is almost flat.

## ■ Applications for Lathes

### Setting Instruction

Ensure the face of the drill flange is hard against the face of the tool holder.

Axis offset: Difference between workpiece axis and the Y-axis.

Align the centreline of the drill to the centreline of the lathes Y axis.

### Drilling Over Holes

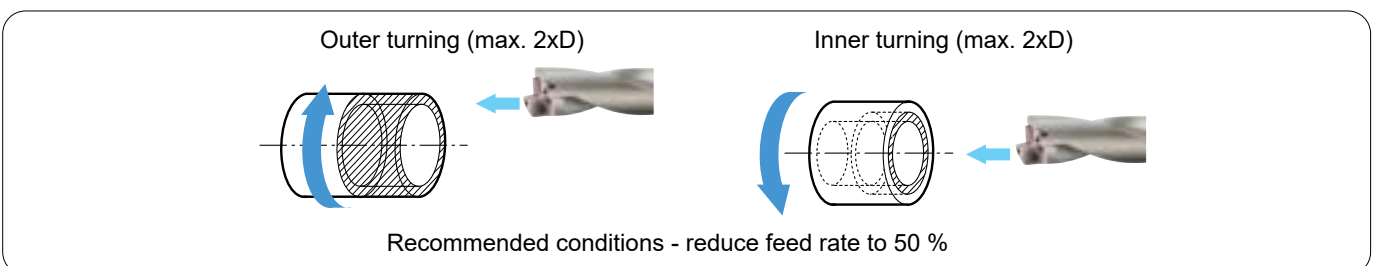

Offset the lathes X axis within the maximum amount stated in the table.

Drill	Max. Offset (mm)	Drill	Max. Offset (mm)

Recommended conditions - reduce feed rate to 30 %

## ■ Turning by Lathes

● = Euro stock

## Eccentric Sleeve **WAS** Type

The Eccentric Sleeve WAS Type, exclusively designed for "SumiDrill" WDX Type, provides up to  $\pm 0,3$  mm of hole size adjustment.

### ■ Dimensions

### ■ Parts

Cat. No.	Stock	DCB	DCON	BDX	LS	L2	L3	L4	Diameter Adjustment Range (max.)	Dimensions (mm)	
										Screw	Wrench
WAS 2025-48	●	20	25	33	43	5	32	5	+0,3 - -0,2	BT306	LH015
WAS 2532-60	●	25	32	42	60	7	46	6	+0,3 - -0,3	BT406	LH020
WAS 3240-70	●	32	40	55	70	7	57	6	+0,3 - -0,3	BT408	LH020
WAS 4050-85	●	40	50	60	70	7	54	6	+0,5 - -0,5	BT408	LH020

### ■ Diameter Adjustment

Note 1: The dial is for reference purposes. Always measure the actual drilling diameter and adjust accordingly.  
Note 2: Not usable with collet chuck type holders. Only use with a side-locking holder like Weldon.

# Indexable Plunge Drill / Plunge Mill

## PDL Type / PCT Type

### Description

The tool cuts in the Z axis direction where tool rigidity is highest, allowing high efficiency roughing for aeronautic components and dies with long tool overhang must be used to machine deep holes and pockets.

- Characteristics**
  - The flat cutting edge design produces near-flat bottom profiles to reduce depth of cut variation during finishing.
  - All sizes come with an air hole for supplying coolant internally to improve chip evacuation.
  - Durable body with special surface treatment offers improved tool life and reliability.
  - The tools use SumiDrill WDX type inserts for handling a wide range of work materials, from steel to non-ferrous metals and exotic alloys.

- The PDL type has a central insert making it possible to make radial cuts beyond the tool's radius, pitch feed cutting, and drilling. (Pocket milling, etc.)

- Although the PCT type has limited radial cutting ability, the tool has many effective teeth enabling it to perform high feed cutting. (Medium finishing of corners, hole expansion, deep grooving, etc.)

Keep the value of  $P_f$  for PDL type tools to less than 70 % of the tool diameter (DC).

Keep the value of  $P_f$  for PCT type tools to less than 50 % of the tool diameter (DC).

For  $a_e$  refer to the dimension under "a<sub>e</sub> max" in the stock / dimensions tables titled "Holders Max, Depth: 3D/5D".

### Application examples

**PDL** Pocketing  
Work Material: Ti Alloy

Tool: PDL400D2S40 (Ø 40)  
Insert: WDXT125012-G  
Grade: ACK300

Cutting Conditions:  
 $v_c = 40$  m/min  
 $f = 0,07$  mm/rev  
( $v_f = 22,3$  mm/min)  
 $P_f = 25$  mm

**PCT** Corner Finishing  
Work Material: Ti Alloy

Tool: PCT320D3S32 (Ø 32)  
PCT250D3S25 (Ø 25)  
PCT200D3S20 (Ø 20)  
Grade: ACK300

Insert: WDXT094008-G  
WDXT073506-G  
WDXT063006-G

Cutting Conditions:  
 $v_c = 50$  m/min  
 $f_t = 0,08$  mm/tooth  
( $v_f = 80-127$  mm/min)  
 $a_e = 3,2-6,5$  mm

**PCT** Grooving  
Work Material: Ti Alloy

Tool: PCT320D5S32 (Ø 32)  
Insert: WDXT094008-G  
Grade: ACK300

Cutting Conditions:  
 $v_c = 40$  m/min  
 $f_t = 0,07$  mm/tooth  
( $v_f = 56$  mm/min)  
 $P_f = 5,0$  mm

**PDL** Drilling  
Work Material: X4 CrNiMo 17 12 2

Tool: PDL200D3S25 (Ø 20)  
Insert: WDXT063006-G  
Grade: ACP300

Cutting Conditions:  
 $v_c = 180$  m/min  
 $f = 0,10$  mm/rev  
( $v_f = 286$  mm/min)  
DC = 20 mm

**PCT** Aeronautic Components  
Work Material: X5 CrNi 18 10

Tool: PCT320D3S32 (Ø 32)  
Insert: WDXT094008-G  
Grade: ACP300

Cutting Conditions:  
 $v_c = 180$  m/min  
 $f_t = 0,15$  mm/tooth  
( $v_f = 537$  mm/min)

## Notes about Mounting Inserts

PDL type: Inserts can be used on either the centre or the outside. Inserts used on the outside cannot be used in the centre. Similarly, inserts used in the centre cannot be used on the outside.  
PCT type: 2 corners can be used only for the outer inserts.

# CBN Tools SUMIBORON series

## New generation Sumiboron inserts – an even better way to machine hardened steels

### ■ General

Building on its global success machining hardened steels with Sumiboron inserts the addition of heat and wear resistant coatings to a variety of tough new CBN substrates has resulted in a new generation of high performance grades. With economy in mind the new inserts are multi cornered.

Choose the coated insert suitable for your application and take your hard part machining operations to the new industry standard.

The sintered CBN tool SUMIBORON is mainly used for the machining of ferrous metals due to its low chemical reactivity with iron. There are 4 different classifications of SUMIBORON as follows:

### ■ Classifications / Applications

Classifications	Structure	Diagram	Grade	Work Material
With a high CBN content, where each grain is fused together, this group can be used for the machining of high-hardness materials like cast iron, heat-resistant alloys and sintered alloys.		<p>CBN grain</p> <p>Metal binder</p>	BN700	<b>K</b> (FC) <b>S</b>
			BN7000	
			<b>BN7115</b>

# Coated SUMIBORON Characteristics

New Coated SUMIBORON Series achieving

- higher speed
- higher efficiency and
- higher precision

## ■ General Features

Using a high heat resistant and tough CBN substrate coupled with a special ceramic coating, this series caters to a wide variety of applications with improved precision and longer tool life as compared to conventional CBN.

There is a comprehensive lineup of economical and easy-to-use insert selection, such as the cost effective double-sided, multi-cornered, one-use type inserts.

## ■ Features

## ■ Cutting Edge Management

# Grade Guidance

## H Hardened Steel Machining

### Advantages of Using CBN

In terms of cost investment, it is much lower in machine cost and overhead cost due to the fact that a CNC lathe is cheaper than a grinding machine. As for the quality of finish, inserts can machine different profiles and the finishing is also commendable as compared to grinding. Environmentally, sludge treatment for grinding is a hazard to the environment but for turning, the chips can be collected and recycled.

### Recommended Grades

Grade	Binder	CBN Content (%)	Grain Size (μm)	Hardness HV (GPa)	TRS (GPa)	Main Coating Components	Coating Thickness (μm)	Features
<b>New</b> BNC2115	TiN	60-65	3	31-33	1,3-1,4	TiAlSiN Super Multi-layered Coating	3	Maintains excellent surface roughness thanks to coating with high notch wear resistance and tough CBN substrate.
<b>New</b> BNC2125	TiN	65-70	4	33-35	1,5-1,6	TiAlSiN Super Multi-layered Coating	3	Along with a tough CBN substrate, the coating combines wear resistance and toughness to achieve even more stable machining.
BNC2010	TiCN	50-55	2	30-32	1,1-1,2	TiCN Multiple Layers	2	Improved wear resistance from coating and substrate, achieves excellent and consistent surface finish.
BNC2020	TiN	70-75	5	34-36	1,4-1,5	TiCN Multiple Layers	2	Utilising a tough substrate along with a highly wear-resistant and adhesive coating layer, to achieve long tool life in general-purpose to high-efficiency machining.
BNC300	TiN	60-65	1	33-35	1,5-1,6	TiAlN	1	Suitable for finishing work materials combining continuous and interrupted cutting.
BNC100	TiN	40-45	1	29-32	1,0-1,1	TiAlN/TiCN	3	Suitable for high-speed finishing thanks to highly wear-resistant coating.
BNC160	TiN	60-65	3	31-33	1,2-1,3	TiAlN/TiCN	3	Achieves stable, high-precision finishing of hardened steel.
BNC200	TiN	65-70	4	33-35	1,4-1,5	TiAlN	3	Provides long tool life thanks to tough substrate and highly wear-resistant coating.
<b>New</b> BNC8115	Al Alloy	85-90	8	39-42	0,95-1,15	TiAlN	2	Grade with 100% solid CBN structure, using PVD coating with excellent wear resistance to enable roughing operations.
<b>Uncoated</b> BN1000	TiCN	40-45	1	27-31	0,9-1,0	-	-	Achieves ultimate wear and fracture resistance. Suitable for high-speed cutting.
BN2000	TiN	50-55	2	31-34	1,1-1,2	-	-	General-purpose grade for hardened steel machining with a high degree of fracture and wear resistance.
BNX20	TiN	55-60	3	31-33	1,0-1,1	-	-	Achieves excellent crater wear resistance. Suitable for high-efficiency cutting under high-temperature conditions.
BN350	TiN	60-65	1	33-35	1,5-1,6	-	-	Achieves ultimate cutting edge strength. Suitable for heavy interrupted cutting.
BNX10	TiCN	40-45	3	27-31	0,9-1,0	-	-	Excellent wear resistance. Suited to continuous high-speed cutting.
BNX25				29-31	1,0-1,1	-	-	High efficiency cutting (continuous-interrupted). Excellent fracture resistance in interrupted cutting at high cutting speed.

### Application Range

#### Coated SUMIBORON

- Induction Hardened Steel (C45, C55, etc.), Carburised Steel

#### Uncoated SUMIBORON

- Induction Hardened Steel (C45, C55, etc.), Carburised Steel

- Die Steel (X155CrVMo12-1, X40CrVMo5-1, etc.), HSS

# Grade Guidance

## K Cast Iron Machining

### Advantages of Using CBN

Following charts show merits of using CBN in cast iron machining compared with conventional tools, such as carbide, cermet or ceramics. SumiBoron performs longer tool life than conventional tools in high speed machining and brings higher efficiency and superior precision.

#### High Speed Machining

- Grey Cast Iron

#### High Speed Machining

- Ductile Cast Iron

#### High Precision Machining

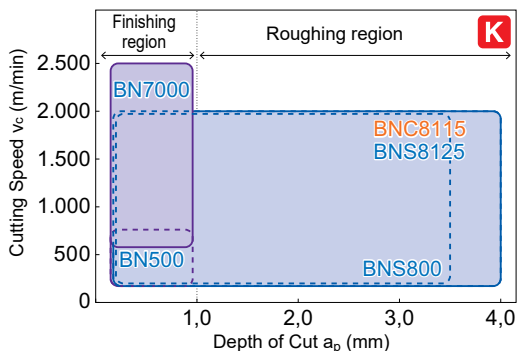

### Recommended Grades

	Grade	Binder	CBN Content (%)	Grain Size (µm)	Hardness HV (GPa)	TRS (GPa)	Main Coating Components	Coating Thickness (µm)	Features
Uncoated	<b>BNS8125</b> <small>New</small>	Al Alloy	85-90	8	39-42	0,95-1,15	-	-	Grade with 100% solid CBN structure that exhibits excellent wear and fracture resistance.
	<b>BNS800</b>	Al Alloy	85-90	8	39-42	0,9-1,1	-	-	Grade with solid CBN structure that has excellent thermal shock resistance.
	<b>BN7000</b>	Co Compounded	90-95	2	41-44	1,8-1,9	-	-	Grade exhibiting wear and fracture resistance in cutting of cast iron and exotic alloys.
	<b>BN500</b> <small>New</small>	TiC	65-70	6	32-34	1,0-1,1	-	-	Grade optimised for cast iron cutting. Provides superior wear and fracture resistance.
Coated	<b>BNC8115</b>	Al Alloy	85-90	8	39-42	0,95-1,15	TiAlN	2	Grade with 100% solid CBN structure, using PVD coating with excellent wear resistance that enables roughing operations.
	<b>BNC500</b>	TiC	85-90	4	32-34	1,1-1,2	TiAlN	3	Suitable for machining of hard-to-cut cast iron, thanks to the highly wear-resistant substrate and coating.

### Application Range

- Grey Cast Iron

- Ductile Cast Iron

- Special Cast Iron

Work Material	Hardness (HB)	Work Material Structure	Examples	Cutting Speed $v_c$ (m/min)				
				100	200	300	350	400
Ni-resistant cast iron	150-200	Austenite	Piston ring	BNC500				
High-Cr cast iron	250-350	Austenite	Pump part	BNS8125/BNS800				
FCV (CGI)	400-580	Pearlite	Engine blocks Cylinder heads Brake discs	BNC500				

# Grade Guidance

## Sintered Component Machining

### Advantages

SUMIBORON has much smaller edge wear than cemented carbide or cermet. It also has better wear resistance and can form a shape edge easily. SUMIBORON is able to prevent burrs and chipping on the edges of the workpiece, achieving good machined precision and surface roughness.

### Recommended Grades

Grade	Binder	CBN Content (%)	Grain Size (µm)	Hardness HV (GPa)	TRS* (GPa)	Main Coating Components	Coating Thickness (µm)	Features
<b>BN7115</b> <small>New</small>	Co Compounded	90-95	1	41-44	2,2-2,3	-	-	Grade balancing ultimate cutting edge sharpness with fracture resistance, suitable for finishing of sintered alloy.
BN7500	Co Compounded	90-95	1	41-44	2,0-2,1	-	-	Grade maintaining good cutting edge sharpness, suitable for finishing of sintered alloy.
BN7000	Co Compounded	90-95	2	41-44	1,8-1,9	-	-	Grade exhibiting improved wear and fracture resistance in roughing of sintered materials.

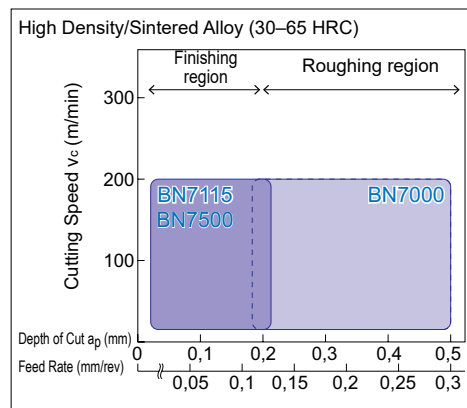

\*Transverse rupture strength measured with test piece equivalent to insert CBN layer.

### Application Range

#### General Sintered Alloy

#### High Density/Sintered Alloy

## Titanium Alloy Cutting

### Advantages

SUMIBORON enables high speed machining of titanium alloys that were previously difficult to machine with conventional tools, drastically improving machining efficiency.

### Recommended Grades

Grade	Binder	CBN Content (%)	Grain Size (µm)	Hardness HV (GPa)	TRS* (GPa)	Main Coating Components	Coating Thickness (µm)	Features
NCB100	-	100	≤ 0,5	51-54	1,8-1,9	-	-	Ideal for high-efficiency finishing of titanium alloy.

\*Transverse rupture strength measured with test piece equivalent to insert CBN layer.

### Cutting Performance

Work Material: Titanium Alloy (Ti-6Al-4V)  
 Insert: CNGA120408  
 Cutting Data:  $v_c = 150$  m/min,  $f = 0,15$  mm/rev,  
 $a_p = 0,5$  mm  
 wet (high pressure coolant)

### Recommended Cutting Conditions

Work Material		Grade	Recommended Cutting Conditions		
Composition	Hardness (HRC)		Cutting Speed $v_c$ (m/min)	Feed Rate $f$ (mm/rev)	Depth of Cut $a_p$ (mm)
Ti-6Al-4V	30-35	NCB100	50 100 150 200 250 300	0,05-0,15-0,20	0,10-0,30-0,50
Ti-5Al-5V-5Mo-3Cr	32-38	NCB100	50 100 150 200 250 300	0,05-0,10-0,20	0,10-0,30-0,50
Ti-10V-2Fe-3Al	32-38	NCB100	50 100 150 200 250 300	0,05-0,10-0,20	0,10-0,30-0,50

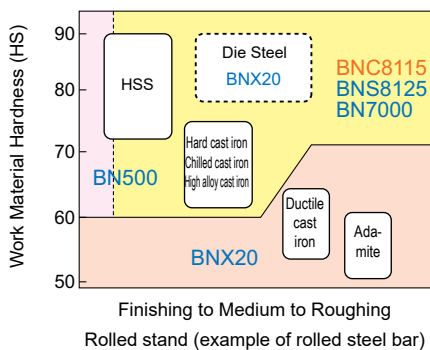

## Roll Machining

### Advantages

SUMIBORON enables the machining of high-hardness rolls that were previously difficult to machine with conventional tools, drastically improving machining efficiency.

### Recommended Grades

### Recommended Cutting Conditions

Work Material		Recommended Cutting Conditions						
Category	Hardness (HS)	Cutting Speed $v_c$ (m/min)				Feed Rate $f$ (mm/rev)	Depth of Cut $a_p$ (mm)	
		20	40	60	80	100	120	140
Adamite	$\geq 40$	[Bar from 40 to 120]				0,1–0,5	0,2–3,0	
Chilled cast iron	$\geq 60$	[Bar from 40 to 120]				0,1–0,5	0,2–3,0	
High-alloy cast iron	$\geq 60$	[Bar from 40 to 120]				0,1–0,5	0,2–3,0	
HSS	$\geq 70$	[Bar from 20 to 60]				0,1–0,4	0,1–3,0	

## Hard Facing Alloy Machining

### Advantages

SUMIBORON enables the machining of high-hardness facing alloys that were previously difficult to machine with conventional tools, drastically improving machining efficiency. The first recommended grade is BN7000, followed by BNS8125.

### Cutting Performance

Work Material: Colmomoy No. 6 (Ni-based self-fluxing alloy)  
 Insert: SNGN090308  
 Cutting Data:  $f = 0,1$  mm/rev,  $a_p = 0,2$  mm dry

BN7000 has a long tool life and minimal wear with high speed cutting.

### Recommended Cutting Conditions

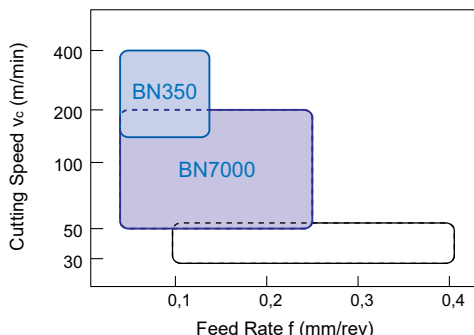

Work Material		Recommended Cutting Conditions					
Category	Material	Cutting Speed $v_c$ (m/min)				Feed Rate $f$ (mm/rev)	Depth of Cut $a_p$ (mm)
		50	100	200	300		
Ni-based self-fluxing alloy	Colmomoy No. 6	[Bar from 100 to 300]				0,05–0,2	0,1–3,0
Co-based self-fluxing alloy	Stellite	[Bar from 50 to 100]				0,05–0,2	0,1–1,0

## Heat Resistant Alloy Machining

### Advantages

SUMIBORON provides long tool life in the finishing of heat-resistant alloys.

### Recommended Grades

SUMIBORON is best suited for finishing of heat-resistant steel.

### Recommended Cutting Conditions

Work Material		Recommended Cutting Conditions					
Category	Material	Cutting Speed $v_c$ (m/min)				Feed Rate $f$ (mm/rev)	Depth of Cut $a_p$ (mm)
		50	100	150	200		
Ni-based heat-resistant alloy	Inconel 718	[Bar from 100 to 200]				0,05–0,2	0,1–1,0
Co-based heat-resistant alloy	Stellite	[Bar from 50 to 100]				0,05–0,2	0,1–1,0

# Edge Specification of SUMIBORON Inserts

## Sumiboron Inserts and Edge Preparation

All SUMIBORON inserts are enhanced with the optimum cutting edge preparation for various grades and geometries (shown on the right).

This is to avoid cutting edge fracture caused by the heavy loads generated during the machining of high hardness materials such as Hardened Steel.

As the pioneer of CBN tools „SUMIBORON“, various selection of grades and edge preparation combinations is our strong point for Hardened Steel machining.

### SUMIBORON Insert Cutting Edge Specification

### Cutting Edge Specification Identification Code

Notation of Edge Preparation			
No.	Standard Type		
L	Low cutting forces	F	Sharp edge
E		E	Honing
E	High efficiency	T	Negative land
H		S	Negative land + honing
WG / WH / W	Wiper		
N-FV / N-LV / N-SV	With Chipbreaker		

### Edge Preparation Identification Code

**S 0 1 2 2 5**

W: Negative land width     $\alpha$ : Negative land angle

Cutting edge: T - Negative land  
S - Negative land + R - Honing

Example: **S01225**  
→ 25°/0,12 mm width negative land with honing

## Insert Types and Cutting Edge Geometries

### Multi Cornered One-Use Type Inserts

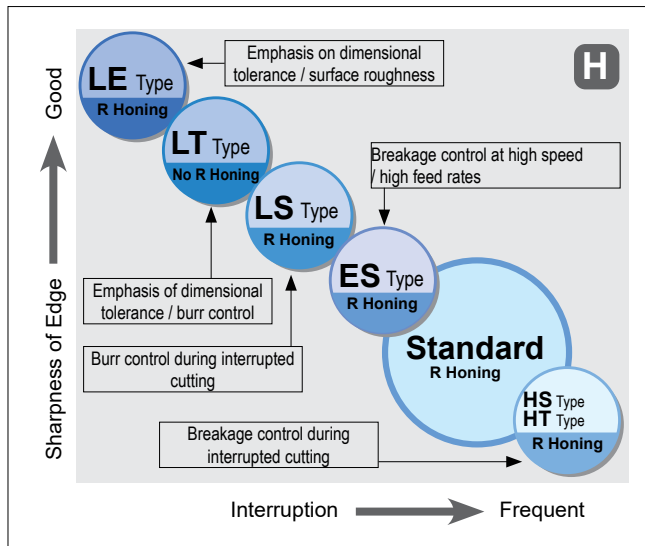

#### ■ Characteristics

- One-use type inserts improve machining efficiency by using each cutting edge to its full potential following the numbering system on each cutting edge then throwing the insert away.
- Multi cornered inserts have a single piece of Sumiboron mounted on every useable corner. Single sided inserts use the top corners whilst double sided inserts use both top and bottom corners. Diamond shaped inserts have 4 corners and triangular inserts have 6 corners.
- A variety of Sumiboron coated grades readily replace expensive grinding operations for high precision tolerances outstanding surface finish, heavy interrupted cutting and efficient cost effective machining of hardened parts.

### Cutting Edge Preparation

#### Machining of Hardened Steel

#### Sintered Alloy Machining

### One-Use Wiper Insert

#### ■ Characteristics

- New lineup includes:
  - WG Type** ⇨ for low-feed cutting
  - WH Type** ⇨ for high-feed cutting
- SUMIBORON one-use insert with wiper edge for hardened steel machining
- Excellent surface finish similar to grinding
- Improved efficiency with higher speeds and feeds

### Break Master N - FV, N - LV, N - SV

Break Master N-SV Type

#### ■ Characteristics

- N-SV type is perfect for carburised layer removal while N-FV / N-LV types are best suited to finishing of hardened steel.
- First CBN insert to feature an integral chipbreaker
- Ideal for removing carburised layer - can be used on both hardened and unhardened materials.
- Effective chip control solution protects component from swarf damage.

# SUMIBORON Break Master N-FV /N-LV /N-SV

## ■ Characteristics

- SUMIBORON one-use insert with chipbreaker.
- N-SV type is perfect for carburised layer removal while N-FV/N-LV types are best suited to finishing of hardened steel.
- Breaker included on the CBN edge, chipbreaking effect can be maintained throughout machining process.
- Unique breaker design can be applied to both hardened and non-hardened parts with effective chip control.

## ■ Application Range

N-SV

### N-SV For Carburised Layer Removal

Ideal for carburised layer removal.

N-LV

### N-LV For Light Cutting

Excellent chip evacuation under conditions with depth of cut at  $\leq 0,3$  mm.

N-FV

### N-FV For Finishing

Excellent chip evacuation under finishing conditions with depth of cut at  $\leq 0,2$  mm.

## ■ Application Examples

### External Carburised Layer Removal

No constant stopages or incorrect part dimension problem and the chips are small.

Double the tool life of competitor's CBN

Work material: 42CrMo4, Carburised steel (shaft)  
Insert: CNGG 120408 N-SV NC4 (BNC200)  
Conditions:  $v_c = 150$  m/min,  $f = 0,15$  mm/rev,  $a_p = 0,5$  mm, x 2 passes, wet

Break Master N-SV  
Tool life = 200 pcs

BNC200 (no breaker)  
Tool life = 200 pcs

Comp. CBN (no breaker)  
Tool life = 100 pcs

### Carburised Face Layer Removal

Break Master N-SV type improves chip control with increased productivity until the pre-set tool life.

Work material: 42CrMo4 (HRC30-62)  
Insert: CNGG 120408 N-SV NC4 (BNC200)  
Conditions:  $v_c = 140$  m/min,  $f = 0,15$  mm/rev,  $a_p = 0,3$  mm, wet

### ■ Characteristics

- SUMIBORON one-use insert with wiper edge for hardened steel machining
- Excellent surface finish similar to grinding
- Improved efficiency with higher speeds and feeds
- New lineup includes:
  - WG** type ⇨ for low-feed cutting
  - WH** type ⇨ for high-feed cutting

### ■ Application Range

- WH** type:  
→ for high-rigidity workpieces and equipment
- WG** type:  
→ for issues of undulation or chatter

### ■ Finished Surface Roughness

The wiper insert offers good finished surface roughness and improved machining efficiency.

Work Material: 15CrMo5 (60 HRC)  
Insert: CNGA120408NC4  
Cutting Data:  $v_c = 135$  m/min,  $a_p = 0,1$  mm, dry

### ■ Wiper Insert Operation

### ■ Tool-Setup WG / WH Wiper

#### CNGA / CCGW / WNGA Type Wiper

1. Use a holder with a 95° approach angle.
2. Tool compensation required.

CNGA / CCGW / WNGA type wiper inserts do not follow the ISO standard. Correction of the tool offset of the cutting edge as explained on the right.

#### Cutting Edge Position Compensation, Outer Processing

Nose Radius	Type	X-Direction	Z-Direction
RE 0,4	WG	-0,02	-0,02
	WH	-0,06	-0,06
RE 0,8/1,2	WG	-0,01	-0,01
	WH	-0,06	-0,06

#### DNGA / DCGW Type Wiper

1. Use a holder with a 93° approach angle.
2. Tool compensation required.

DNGA / DCGW type wiper inserts do not follow the ISO standard. Correction of the tool offset of the cutting edge as explained on the right.

Note: DNGA/DCGW type wiper inserts are only possible for external and internal turning, not for facing.

Nose Radius	Type	X-Direction	Z-Direction
RE 0,4	WG	-0,17	-0,01
	WH	-0,70	-0,06
RE 0,8	WG	-0,05	0
	WH	-0,58	-0,05

# Uncoated SUMIBORON BN1000/BN2000

**H** Hardened Steel

## Uncoated CBN grades for hardened steel machining

### General Features

A new uncoated type of SUMIBORON that has a newly developed high-purity ceramic binder.

Both fracture and wear resistance are combined to achieve a stable tool life in a wide variety of hardened steel machining.

Available in single corner and multi-corner type inserts.

### Characteristics

- BN1000** - Superior high-speed machining grade with the highest wear resistance of any uncoated SUMIBORON. Delivers excellent tool life in continuous cutting to light-interrupted cutting.
  - Improved fracture resistance while also emphasizing wear resistance.
  - Improved hardness and heat resistance from the high-purity TiCN ceramic binder.
- BN2000** - General purpose grade suitable for typical hardened steel machining applications. Provides stable tool life in everything from continuous cutting to light-to-medium interrupted cutting.
  - High degrees of both fracture resistance and wear resistance.
  - Significant improvements in the performance of both by employing a high-purity ceramic binder.
  - Stable surface roughness by increasing sharpness (Figure on right).

BN2000

**■ Machining Precision**

BN1000

BN2000

General Features

BNC2115/BNC2125 have been added to our coated SUMIBORON series and are our first recommendations for hardened steel machining, for even higher efficiency machining. It's the pinnacle of high accuracy and high efficiency cutting. In combination with BNC2010/BNC2020, which emphasize stable tool life, they improve productivity in all kinds of hardened steel machining.

Features

BNC2115

New

- The definitive grade in high-accuracy machining. Realises long tool life with excellent surface roughness and stable machining.
- Further maintains excellent surface roughness. Maintains excellent surface roughness thanks to a coating with high notch wear resistance and tough CBN substrate.

BNC2125

New

- First recommendation for hardened steel machining. Superb wear and fracture resistance.
- Achieves long, stable tool life even in high-efficiency and interrupted machining. Along with a tough CBN substrate, the coating combines wear resistance and toughness to realise stable machining.

BNC2010

- Grade for high-precision machining with excellent surface roughness and finished surface accuracy. Grade ideal for high-precision machining, with highly wear-resistant CBN substrate and coating.

BNC2020

- General-purpose grade suitable for typical hardened steel machining applications. Achieves further stability in machining of a wide range of hardened steel components.

Application Range

Differentiation

# BNC2115/BNC2125/BNC2010/BNC2020

## ■ CBN Substrate und Coating Structure

### BNC2115

High-Precision Machining  
(Medium- to high-speed)

Thick layer of laminated high-strength TiAlSiN super multi-layered coating and highly heat-resistant TiCN coating. Achieves excellent surface finish quality with application to a tough substrate.

### BNC2125

General Machining  
(Medium- to high-speed)

Thick layer of super-multilayered ultra-fine TiAlBN coating with high strength and high hardness. High performance in a wide range of cutting through application to a tough substrate.

### BNC2010

High-Precision Machining  
(Low- to medium-speed)

Laminated high-strength AlCrN multi-layered coating and highly heat-resistant TiCN coating is applied to a highly wear-resistant substrate to maintain excellent surface finish quality.

### BNC2020

General Purpose Machining  
(Low to medium speed, unstable cutting)

Application of highly wear-resistant TiAlN coating to a tough substrate. Machining stability in low-rigidity environments and high-load cutting is dramatically improved.

## ■ Recommended Cutting Conditions

Grade	Cutting Speed $v_c$ (m/min)		Feed Rate $f$ (mm/rev)		Depth of Cut $a_p$ (mm)

## ■ Cutting Performance

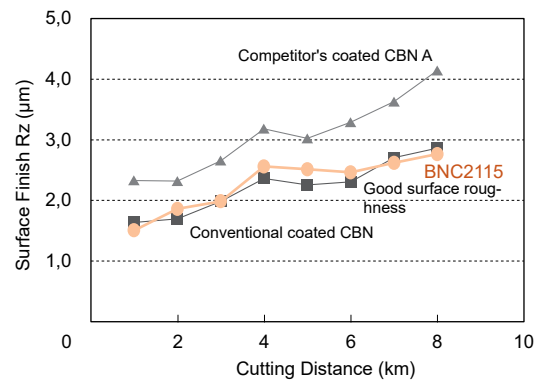

### BNC2115

#### Continuous Cutting, Wear Resistance

Work Material: 16CrMo4 (58–62 HRC)  
Insert: DNGA150408NC4  
Cutting Data:  $v_c = 200$  m/min,  $f = 0,1$  mm/rev,  $a_p = 0,15$  mm, wet

#### Continuous Cutting, Machined Surface Roughness

Work Material: 16CrMo4 (58–62 HRC)  
Insert: DNGA150408NC4  
Cutting Data:  $v_c = 200$  m/min,  $f = 0,1$  mm/rev,  $a_p = 0,15$  mm, wet

### BNC2125

#### Continuous Cutting, Wear Resistance

Work Material: 100Cr6 (58–62 HRC)  
Insert: DNGA150408NC4  
Cutting Data:  $v_c = 150$  m/min,  $f = 0,1$  mm/rev,  $a_p = 0,2$  mm, wet

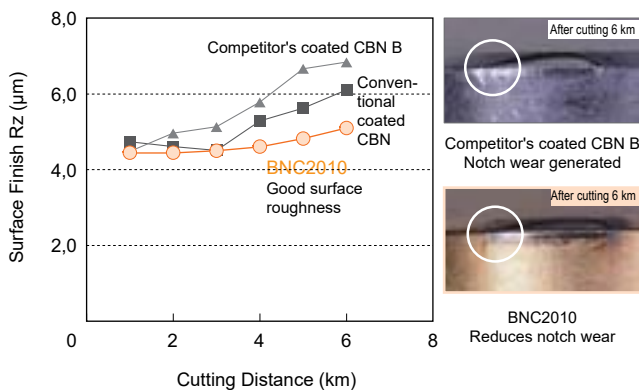

#### High-Load Cutting, Fracture Resistance

Work Material: 100Cr6 (58–62 HRC)  
Insert: DNGA150408NC4  
Cutting Data:  $v_c = 150$  m/min,  $f = 0,15$  mm/rev,  $a_p = 0,5$  mm, 63 m/times, wet

### BNC2010

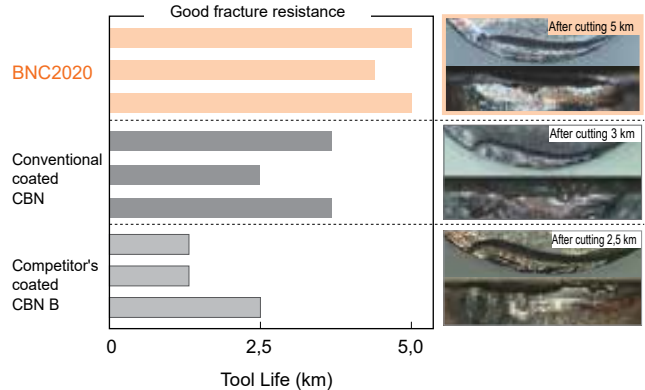

#### Continuous Cutting, Machined Surface Roughness

Work Material: 16CrMo4 (58–62 HRC)  
Insert: DNGA150408NC4  
Cutting Data:  $v_c = 120$  m/min,  $f = 0,14$  mm/rev,  $a_p = 0,15$  mm, wet

### BNC2020

#### Interrupted Cutting, Fracture Resistance

Work Material: 16CrMo4 with 5 grooves (58–62 HRC)  
Insert: DNGA1204012NC4  
Cutting Data:  $v_c = 130$  m/min,  $f = 0,1$  mm/rev,  $a_p = 0,6$  mm, dry

The ultimate grades BNC300 and BN350 in interrupted machining of hardened steel

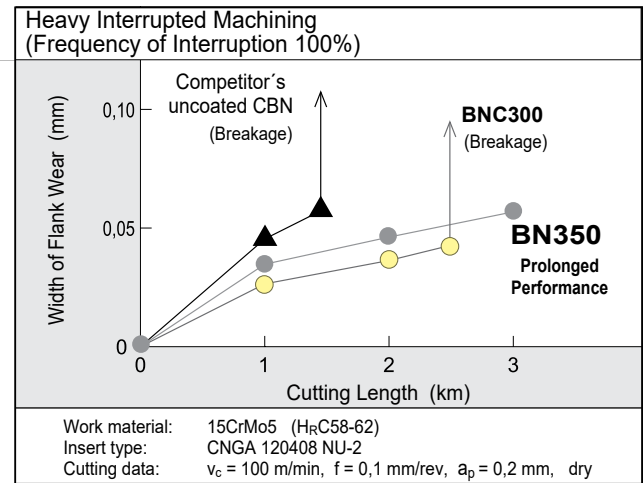

■ General Features

- **BNC300**  
CBN substrate that emphasizes on toughness coupled with a highly wear resistant TiAlN based coating layer that has improved adhesion strength. With a good balance of fracture and wear resistance, stable and longer tool life can be achieved in interrupted cut or in a mixture of continuous and interrupted cutting.
- **BN350**  
SUMIBORON series highest fracture resistance and toughest CBN. Reliable grade for achieving stable tool life in heavy interrupted cutting conditions.

■ Characteristics

- BNC300**
- Stable and long tool life in interrupted cutting  
Achieving stable and long tool life in heavy interrupted cutting, with superior fracture resistance.
  - Superior dimensional precision  
Good adhesion strength, TiAlN based, high wear resistance coating. Achieving superior dimensional precision even in interrupted cutting.
  - Suitable for different types of workpieces  
Achieving significantly longer tool life even on workpieces that have a mixture of continuous and interrupted cutting.
- BN350**
- Stable and long tool life in interrupted cutting  
Stable and long tool life with superior fracture resistance, that prevents fractures which commonly occurs during interrupted cutting.

■ Performance

■ Recommended Application Range

■ Recommended Cutting Conditions (BNC300, BN350)

$v_c$ (m/min)	$f$ (mm/rev)	$d_{oc}$ (mm)

Coolant ... Interrupted cutting: dry

**BN7000** **K** **PM** / **BN7115** **PM**

■ General Features

Good wear resistance through high CBN content also delivers superior fracture resistance by increasing the binding strength between CBN particles. BN7115 provides stable performance for high-speed finishing work and is ideal for finishing of sintered alloys.

New cutting edge treatment with an emphasis on fracture resistance: "US" type chipbreaker now available.

Removal of binder → comparison of CBN particles' binding strength

■ Features

- BN7000**
  - Achieves high-efficiency machining of sintered alloys of various shapes with a standard and two types of cutting edge variations. Also exhibits high performance for difficult-to-cut materials such as rolls, high speed steel and heat resistive alloys. Exhibits good thermal resistance in high-speed machining of cast iron.
- BN7115** <sup>New</sup>
  - With improved CBN particle/binder boundary strength due to the special binder and improved binding strength between CBN particles thanks to our proprietary sintering process, the edge sharpness in sintered alloy machining is excellent and burrs and tearing are suppressed.

■ Application Range

- Sintered Alloy (50–95 HRB/90–200 HV)

■ Recommended Cutting Conditions

- Cast Iron K

Work material	Grade	Cutting conditions (min.–optimum–max.)		
		Cutting speed $v_c$ (m/min)	Feed rate $f$ (mm/rev)	Depth of cut $a_p$ (mm)
Cast Iron	<b>BN7000</b>	100–1,000–2,500	0,05–0,30–0,60	0,05–0,50–1,00

- Sintered Alloy Sintered Alloy

Work material	Grade	Cutting conditions (min.–optimum–max.)		
		Cutting speed $v_c$ (m/min)	Feed rate $f$ (mm/rev)	Depth of cut $a_p$ (mm)
General sintered alloy	<b>BN7115</b>	10–150–300	0,01–0,08–0,15	0,05–0,13–0,25
	BN7000	10–150–300	0,01–0,15–0,30	0,05–0,25–0,50
High-density sintered alloy	<b>BN7115</b>	10–100–200	0,01–0,06–0,12	0,05–0,10–0,20

■ Recommended Edge Treatment

**BN7000**

● Negative Land

Type	$\alpha$	w (mm)	Honing
Standard	15°	0,12	No
LF	–	–	No
HS	25°	0,12	Yes

Round honed cutting edge

**BN7115**

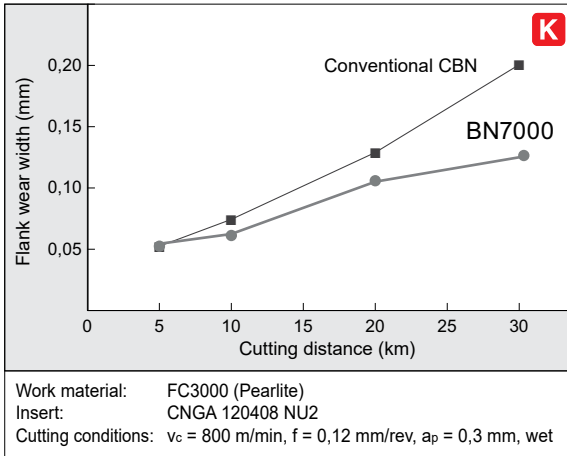

Type	$\alpha^\circ$	W (mm)	Honing
Standard	15°	0,12	no
LF	Standard edge		no
LE	Standard edge		yes
LS	15°	0,07	yes
HS	25°	0,05	yes
US	25°	0,12	yes

Frequency of interruption → Heavy

New US type emphasises fracture resistance, ideal for heavy interrupted cutting.

■ Cutting Performance (Cast Iron)

● BN7000 Continuous Cutting (Flank Wear)

■ Cutting Performance (Sintered Alloy)

● BN7115 Continuous Cutting (Surface Roughness)

● BN7115 Continuous Cutting (Wear Resistance)

● BN7115 Interrupted Cutting (Fracture Resistance)

● BN7000 Interrupted Cutting (Fracture Resistance)

## General Features

Enables a wide range of machining from roughing to finishing of cast iron, exotic alloy cast iron and hardened steel.  
100% solid CBN structure enables depth-of-cut of 0,5 mm and above.

## Features

**BNC8115** <sup>New</sup> ● PVD coating with excellent wear resistance suppresses flank wear when machining difficult-to-cut cast iron and hardened steel. Ideal for roughing and depth-of-cut of 0,5 to 3,0 mm. Can also be used for roughing and finishing of grey cast iron. Gold-colored coating improves visibility of used corners.

**BNS8125** <sup>New</sup> ● Optimising the particle size distribution of the CBN particles has resulted in improved chipping resistance and longer life while machining wear resistance during grey cast iron machining.

## Application Range

### ● Grey Cast Iron

Wet machining is recommended for grey cast iron. In case of dry machining, our 1st recommendation are BNC8115/ BNS8125 for both roughing and finishing.

### ● Ductile Cast Iron

### ● Hardened Steel

## Recommended Cutting Conditions

### ● Cast Iron (Turning)

Work Material	Grade	Cutting Conditions <small>Min.-Optimum-Max.</small>		
		Cutting Speed $v_c$ (m/min)	Feed Rate $f$ (mm/rev)	Depth of Cut $a_p$ (mm)

## Coated CBN grade for ductile cast iron machining

### General Features

Further improvements in the toughness of the sintered CBN and wear resistance from the application of a newly developed high-purity TiC binder. In addition, it demonstrates exceptional wear resistance by combining a ceramic coating with excellent heat resistance. High-speed and high-precision machining is achieved when finishing ductile cast iron. It also provides a long, stable tool life in machining high-strength ductile cast iron, special cast irons such as vermicular cast iron, and centrifugal cast iron.

### Characteristics

- Achieves a Long, Stable Tool Life at  $v_c = 400$  m/min  
Superior wear resistance, makes stable machining possible under high-speed conditions.
- Supports High-precision Machining  
Can maintain excellent dimensional tolerance and surface roughness.

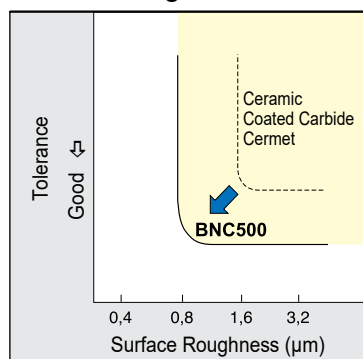

### Cutting Performance

### Application Range

### High Precision Machining

### Recommended Cutting Conditions

$v_c$ (m/min)

# SUMIBORON Binderless NCB100

## ■ Features

SUMIBORON Binderless is a polycrystalline cubic boron nitrid (CBN) that directly binds nanometer- or sub-micron-level CBN particles without binder materials.

Binderless CBN is harder and has better thermal conductivity. Therefore, it enables higher efficiency and longer tool life in machining of hard-to-cut materials, such as titanium alloy and cobalt-chromium alloy.

## ■ Mikrostructure of Sintered Body

## ■ Physical Properties

	Binderless CBN	Conventional CBN
CBN Content (%)	100	90–95
Binder Material	–	WC–Co
Hardness (GPa)	51–54	41–44
Thermal Conductivity (W/m·K)	180–200	100–120

## SUMIBORON Binderless CBN

### ■ Advantages

- Higher efficient machining and longer tool life have been realized by the effects of higher hardness and thermal conductivity than conventional CBN grades.
- Achieves high precise machining and better surface integrity because of less adhesion by not containing any binder materials.
- Ideal tool material for high-efficient finishing of hard-to-cut materials, such as titanium alloy and cobalt-chromium alloy, cemented carbides and cermets.
- NBC100 is able to maintain excellent dimensional accuracy and surface roughness for a long period.
- Shows improved work efficiency and cost reduction by less frequency of exchanging inserts compared to conventional tool grades.

# SUMIBORON / SUMIDIA Production Process

## ■ General

Since 1970s, Sumitomo has pioneered the development of sintered cubic boron nitride (CBN) and sintered diamond (PCD) tools successfully used in the tool making industries. These tool materials can be epoch-making in a sense of broadening the cutting application range.

## ■ Production Process

In the production process of **SUMIBORON / SUMIDIA**, CBN powder / diamond powder is firstly synthesized under the ultra - high pressure, and secondly, the synthesized crystalline grains are sintered.

Fig. 2 shows a diagram of high temperature high pressure apparatus for processing the ultra - high pressure sintering operation.

This apparatus is basically composed of a piston and a cylinder to generate ultra - high pressure as high as 5000 N/mm<sup>2</sup> with a special device. The piston and cylinder are made of cemented carbide.

To manufacture final products round discs of SUMIBORON and SUMIDIA material are cut into specific shapes and brazed on to tool bodies made of cemented carbide, or steel, etc., and after that finished by grinding the edge. In another process the final product can be obtained only by cutting blanks and finishing them.

Fig. 1

Fig. 2

## ■ SumiBoron / SumiDia Grinding Method

Items		SumiBoron	SumiDia
Grinding machine	-	1) Carbide grinding machine is applicable. 2) R Pointer should be used. 3) Should be wet grinding.	1) Special-purpose high rigidity grinding machine is desirable. 2) Be sure of applying with wet system.
Wheel	Abrasive	Diamond	Diamond
	Grain size	D 25 - medium, D20 - fine (#400-800)	Rough grinding: D 35 (#400 mesh) Finish grinding: D 25 (#800-1500 mesh)
	Bond	Resinoid or vitrified	Special-purpose metal bond for diamond sintered tool or vitrified
	Concentration	100	100-125
	Dressing	Use #400 WA stick	Execute dressing with a WA stick of about 400 mesh.
Grinding condition	Wheel speed	800-1000 m/min.	800-1000 m/min.
	Table cycle	30-60 cycles/min.	30-60 cycles/min.
	Grinding oil	Water soluble grinding coolant oil	Water soluble grinding coolant (Solution type)
Others	-	1) Check chipping of the cutting edge with microscope after finishing. 2) Blank surface cut by EDM should be ground more than 0,05 mm	1) Rake surface is lapped generally 2) Inspect with microscope of magnification of 30-50 times if there is edge chipping. 3) Edge treatment of tool should be sharp for cutting non-ferrous metals. 4) Remove the wire-cut surface of blank by 0,05 mm or more in grinding operation.

# SUMIDIA Series

## General Features

SUMIDIA sintered diamond series has 3 grades (DA1000, DA150, DA90) with individual features depending on the optimum combination of diamond particle size and binder, as well as the NPD10 grade (nano-polycrystalline diamond) where nano-order diamond particles are directly bound with high strength without using binders.

This series is suited to a wide range of applications from machining of aluminium alloy to machining of hard brittle materials and cemented carbide.

## Series • Features • Application

Grade	Features	Application	Average size of Diamond grains (µm)	Hardness Hv	TRS (GPa)
SUMIDIA	<b>DA1000</b>	High density sintered material made of ultra-fine diamond particles that demonstrates optimum wear resistance and excellent edge sharpness.	< 0,5	50 60	≈ 2,60
	<b>DA150</b>	Micro-grained sintered diamond grade with strong diamond-to-diamond bonding. It is suitable for the machining of non-ferrous metals and other very hard materials.	5	50 ~ 60	≈ 1,95
	<b>DA90</b>	Contains coarser diamond particles than other grades, giving it good wear resistance suitable for the machining of carbides and high-silicon aluminium. Shows the highest diamond content for excellent wear resistance.	< 50	50 ~ 60	≈ 1,10
SUMIDIA Binderless	<b>NPD10</b>	A 100% diamond grade made by nano-level diamond grains with direct conversion sintering. Has the highest wear resistance and fracture resistance and the best edge sharpness.	< 0,05	120 ~ 130	≈ 3,15

## Application Range

Machinability	Work Material	Turning		Milling	Example Part
		Roughing	Finishing		
Good ↑ ↓ Difficult	Sintered aluminium	DA1000		Milling	Cylinder liner
	Die cast aluminium (ADC12)				Transmission case, oil pan, cylinder block, aluminium wheel
	Low silicon (AC2B-T6, AC4C-T6)				Cylinder head
	High silicon (T6)				Cylinder block
					DA150

## Aluminium

## Non-Aluminium

Machinability	Work Material	Turning		Milling	Example Part
		Roughing	Finishing		
Good ↑ ↓ Difficult	Non-ferrous sintered alloy	DA1000		Milling	Bushing
	Gunmetal carbon				Connection rod
	Carbide	DA90	NPD10		Punches, dies, rolls
	Iron combined	DA90	DA150		Cylinder block, bearing cap

## Cutting Performance

Continuous Cutting

Work Material: MMC (Al-20% SiC)  
Insert: CNMX 120408, Holder: PCLN2525  
Cutting Cond.:  $v_c = 350$  m/min,  $f = 0,2$  mm/rev,  $a_p = 0,18$  mm, wet

Continuous Cutting

Work Material: Cemented Carbide (87 HRA)  
Insert: DCMW 070204 NF  
Cutting Cond.:  $v_c = 20$  m/min,  $f = 0,1$  mm/rev,  $a_p = 0,2$  mm, wet

Continuous Cutting

Work Material: Cemented Carbide (91 HRA)  
Insert: DCMW 11T304 RH (NPD10), DCMW 11T304 NF (DA90)  
Cutting Cond.:  $v_c = 20$  m/min,  $f = 0,05$  mm/rev,  $a_p = 0,05$  mm, dry

## Recommended Cutting Conditions

Cutting Conditions	Work Materials	Aluminium Alloys	Copper Alloy	Reinforced Plastics	Wood or Organic Materials	Carbide	Carbon
		Cutting Speed	$v_c$ (m/min)	~ 3.000	~ 1.000	~ 1.000	~ 4.000
Feed rate	$f$ (mm/rev)	~ 0.2	~ 0.2	~ 0.4	~ 0.4	~ 0.2	~ 1,0
Depth of cut	$a_p$ (mm)	~ 3.0	~ 3.0	~ 2.0	-	~ 0.5	~ 2,0

# SUMIDIA Binderless

## Nano-Polycrystalline Diamond

### ■ General Features

Nano-polycrystalline diamond is a type of polycrystalline diamond, produced by directly binding nano-level diamond grains without using any binders.

This material is unique to our company and as compared to conventional diamond grades containing binders, it exhibits higher strength, excellent wear resistance and fracture resistance.

SUMIDIA Binderless is the series of tools with cutting edges made from this high performance nano-polycrystalline diamond.

### ■ Micro-Structure Comparison

Nano-Polycrystalline Diamond  
SEM Structure

Diamond particle average grain diameter (30 - 50 nm)

Conventional PCD  
SEM Structure

Diamond particle average grain diameter (1 - 10 µm)

### ■ Hardness

## SUMIDIA Binderless

### ■ Application Examples

- Ballnose Endmill / Radius Endmill (Carbide Machining)

- Indexable Inserts (Carbide Machining)

# SUMIDIA Binderless NPD10 / DA90

## General Features

NPD10 is made from high-hardness nano-polycrystalline diamond. This is a pure diamond material, but unlike single-crystal diamonds, it has no anisotropy.

It achieves extended tool life and machining accuracy superior to conventional diamond tools when machining hard brittle materials such as cemented carbide.

DA90 is a polycrystalline diamond grade in which coarse diamond particles have been sintered to form a dense structure. The high diamond content, with high wear resistance, makes it ideal for roughing of cemented carbide and hard brittle material.

Optimized design and mass production technology have been developed, achieving the same performance as conventional tools with higher cost performance.

## Characteristics

- **Ideal for Finishing of Hard Brittle Materials Including Cemented Carbide (NPD10)**  
High-precision cutting of cemented carbide thanks to the outstanding wear resistance of nano-polycrystalline diamond.
- **Superior Dimensional Tolerance Maintained for a Long Time (NPD10)**  
Tool replacement count can be drastically reduced compared to conventional diamond tools, enabling work efficiency to be improved and total costs to be reduced.
- **Ideal for Roughing of Hard Brittle Materials Including Cemented Carbide (DA90)**  
Stable tool life in sintered surface machining of cemented carbide and roughing of hard brittle materials thanks to the outstanding wear resistance of the coarse-grained polycrystalline diamond.
- **Uses SUMIDIA NF Insert (DA90)**  
Optimized design and mass production technology have been developed, achieving the same performance as conventional tools with higher cost-performance.

## Applicable Range (Cemented Carbide)

## Applications of NPD10 and DA90 (Cemented Carbide)

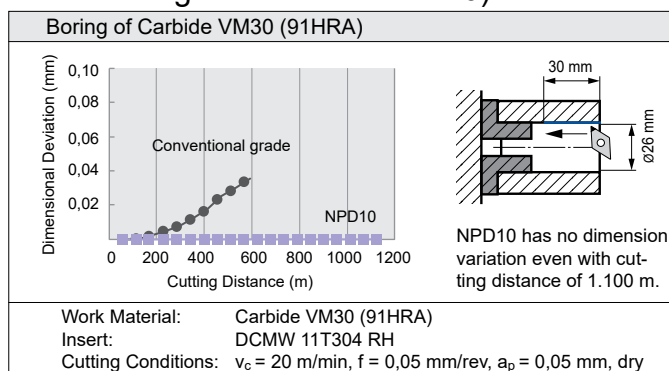

Grade	SUMIDIA Binderless NPD10	SUMIDIA DA90
Dimensional Tolerance	⊙ Best	△ The first recommendation is NPD10
Tool Life (Wear Resistance)	⊙ Best $a_p \leq 0,2 \text{ mm}, f \leq 0,1 \text{ mm/rev}$	○ $a_p \geq 0,2 \text{ mm}$ can also be used
Sintered Surface Machining of Cemented Carbide	⊗ Impossible	⊙ Best
Machined Surface Quality	⊙ Best	△ The first recommendation is NPD10

## Recommended Cutting Conditions (Carbide Machining)

Work Material			Grade	Cutting Conditions			
Class	Hardness (HRA)	SEI Grades		Cutting Speed $v_c$ (m/min)	Feed Rate $f$ (mm/rev)	Depth of Cut $a_p$ (mm/rev)	
VM, VC	40	$\geq 88$	G5, D2	NPD10	5-15-20	0,03-0,05-0,07	0,03-0,05-0,07
VM, VC	70, 60, 50	83 - <88	G7, G6	NPD10	5-20-30	0,03-0,10-0,20	0,03-0,10-0,20
VM, VC	-	$\geq 83$	G7, G6, G5, D2	DA90	5-20-30	0,03-0,10-0,20	0,03-0,20-0,50

Min. - Optimum - Max., Cutting conditions: NPD10: dry, DA90: wet

## Machining Precision of NPD10

## Wear Resistance of DA90

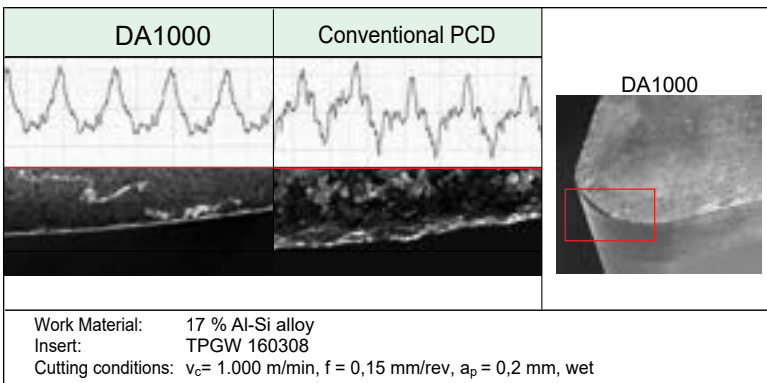

### General Features

SumiDia DA1000 is a high density, ultra fine grained sintered PCD with high toughness similar to that of cemented carbides.

SumiDia DA1000, with its great improvement in fracture resistance, eliminates the breakage problems faced by conventional PCD tools especially during the milling of Aluminium alloys and achieves a longer and more stable tool life.

Furthermore, the NF type inserts makes it even more cost effective.

### Cutting Performance

## NF Type Inserts

### General Features

- Total Cost Effectiveness with High Performance and Lower Price
  - Optimum design utilizing improved mass production techniques provides a relatively lower cost.
  - Regrindable type results in huge total cost reduction.
- Wide Application Range
  - Wide range of stocked items for small hole boring, OD turning to milling processes.
  - Negative and positive type inserts that are applicable on standard lever-lock, pin-lock type holders.

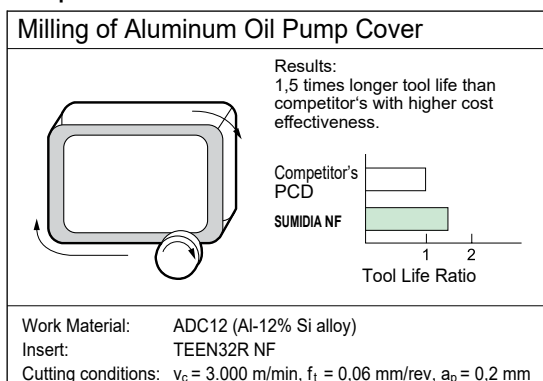

### Efficiency

SumiDia NF-type inserts preserve the excellent basic performance of DA1000 while achieving high cost performance through optimal design and development of mass production technology. These inserts achieve the high performance of SUMIDIA DA1000, including excellent fracture resistance, wear resistance and smooth work material surface finishing.

(NF-type is precision ground just like conventional inserts.)

### Application Examples

### ■ Characteristics

- Provides excellent chip control in semi finishing and finishing of aluminium alloy.
- Solves chip control problems and dramatically improves work efficiency.
- Achieves stable tool life by employing high toughness grade DA1000.

### ■ Applications Range

Wrought Aluminium Alloy (A6061)

#### NLD Type Chipbreaker

Achieves excellent chip control for finishing.

Casted Aluminium Alloy (ADC12)

#### NGD Type Chipbreaker

Achieves excellent chip control for semi finishing.

### ■ Application Examples

#### Internal Turning of Machine Component

Provides good chip control in small-depth cutting of wrought Al alloy.

Breakmaster **NLD** type

Without chip breaker

Work Material: A6061  
Insert: VCMT110302 **NLD** NF (DA1000)  
Cutting Conditions:  $v_c = 200$  m/min,  $f = 0,20$  mm/rev,  $a_p = 0,10$  mm, wet

#### Internal Turning of Transmission Component

Offers good chip control in casted material. Small chips - easy to remove.

Breakmaster **NGD** type

Without chip breaker

Work Material: ADC12  
Insert: TPMT110304 **NGD** NF (DA1000)  
Cutting Conditions:  $v_c = 400$  m/min,  $f = 0,23$  mm/rev,  $a_p = 1,20$  mm, wet

# SUMIDIA One-Use Inserts Break Master DM Type

**N** Non-ferrous Metal

## General Features

Economy One-Use Insert

- Similar to SumiBoron One-Use type inserts

With Built-in Chipbreaker for Effective Chip Removal

- Solving chip control problems and improving efficiency with DM-type chipbreaker.

Extensive Insert Range for External and Facing Operation

- 80° and 55° diamond shaped inserts are added to expand the application range of this series.

## Application Range

Triangular Type Insert (Boring)

CCMT/DCMT Type (External Turning & Facing)

## Chip Control

Break Master

No Chipbreaker

## Application

Machining Details	Cutting Conditions	Results
Work Material: AC2A-T6	$v_c = 300$ m/min $f = 0,06$ mm/rev $a_p = 0,35$ mm	Surface finish of the bore hole was less than $Ra = 1 \mu\text{m}$ .
Operation: Internal Boring	Wet cut	Chips formed was of a uniform curl of about 2 mm in length. There was almost no chips left inside the bore hole.

## Recommended Conditions

Boring (Triangular Insert)

Feed Rate	Depth of Cut	Type
-0.15 mm/rev.	-0,7 mm	Wet cut

External Copying (55°, 80° Diamond Shaped Inserts)

Feed Rate	Depth of Cut	Type
-0.15 mm/rev.	-0,5 mm	Wet cut

For facing process, D.O.C. should be less than 0,4 mm

Sumidia Inserts

**BSME** → M48-50  
Very small boring bar - brazed type

- Solid carbide shank boring bar with brazed CBN tip and inner coolant supply.
- For tiny hole diameter boring in hardened steel.
- Min. boring dia. is  $\varnothing$  2,5 mm.

**SEXC** → M48-51  
CBN boring tool for small diameter boring

- Solid carbide shank boring bar with indexable CBN insert and inner coolant supply.
- For small hole diameter boring in hardened steel.
- Min. boring dia. is  $\varnothing$  4,0 mm.

**BNBB** → M52  
Small hole boring tools

- CBN cutting edge is brazed on to a solid carbide shank.
- Small hole boring for hardened steels.
- Min. boring dia. is  $\varnothing$  3,5 mm.

**BNZ** → M53  
Small hole boring bars

- Solid carbide boring bars with economical CBN insert.
- Small hole boring for hardened steels.
- Min. boring dia. is  $\varnothing$  7,0 mm.

**BNB** → M53  
Small hole boring bars

- Solid carbide boring bars with economical CBN and PCD insert.
- Min. boring dia. is  $\varnothing$  10,0 mm.

**GWB / PSC** → M54-55  
CBN Grooving System for Hardened Steels

- Tangential Inserts – Double clamp holder
- Groove Widths from 1,5 – 6,0mm
- New CBN grade for interrupted grooving
- ISO-PSC polygon modular grooving system

**BNGG** → M56  
Threading holders

- CBN cutting edge for hardened steel
- Adjustable threading after regrinding.

**DABB** → M57  
Small hole boring tools

- PCD cutting edge for finishing of small non-ferrous parts
- Min. boring dia. is  $\varnothing$  3,0 mm.
- DABB-C for boring  
DABB-N for profiling and corner grooving

**ANX** → M58-69

**High speed cutter for Non-ferrous Metal**

- Achieves feeds of over  $v_f = 30.000$  mm/min
- 6 different edge preparations
- Simple screw-fastening structure enables fine adjustments to be made easily
- Precise applications of coolant to the machining point
- Milling cutter range with diameter from  $\varnothing 32-160$  mm

**RF** → M70

**High speed face mill for Aluminium**

- Finishing and roughing aluminium alloys and non-ferrous materials
- High precision and highspeed machining  $v_c = 5000$  m/min
- Aluminium alloy body  
Run-out less than  $10 \mu\text{m}$
- Easy assembling

**SRF** → M71

**High speed face mill for Aluminium**

- Small diameter cutter for small machines
- High speed roughing and finishing with SumiDia DA2200
- High speed capability of  $\text{rpm} = 20.000$
- Economical PCD insert NF type

**FMU** → M72-73

**"BN Finish Mill" for finishing grey cast iron**

- High speed machining  $v_c = 1500$  m/min
- Excellent surface roughness  $R_z = 3,2$
- Run-out less than  $10 \mu\text{m}$
- Easy assembling

**BNES** → M74

**"Helical Master" SUMIBORON Endmill**

- Spiral CBN brazed cutting edge for super finishing hardened steel (HRC 50 – 60)
- Dry machining
- Stable cutting
- High accuracy
- Excellent swarf evacuation

**BNBP** → M75

**"Mould Finish Master" SUMIBORON Micro Ball Nose Endmills**

- High precision machining of hardened steels < HRC 70 with long tool life
- Super tough grade SUMIBORON BN350 prevents chipping of the cutting edge
- R accuracy :  $\pm 0,005$  mm

**NPDRS / NPDB(S)** → M76-77

**"Mould Finish Master" SUMIDIA Binderless Endmills**

- NPDRS - radius endmills
- NPDB(S) - ball nose endmills
- For finishing of carbide and brittle materials
- High precision machining and long tool life

**DAL / DDL / DML** → M78-79

**High precision SUMIDIA Drills**

- PCD cutting edge is brazed on to a solid carbide shank.
- From general to high precision drilling of Aluminium alloys
- DML type is suitable for chamfering and stepped drilling

# BSME/SEXC Series

## ■ Features

- New ultra small boring bar with CBN cutting edge
- Internal coolant
- Easy setting and handling
- High accuracy
- Carbide body for high rigidity
- One sleeve for different diameters

## ■ Basic System

## ■ 2 Types of CBN Small Hole Boring Bar System

BSME - CBN Brazed Cutting Edge Type	SEXC - Indexable CBN Insert Type
Min. bore diameter: $\varnothing 2,5 - 5,0$ mm	Min. bore diameter: $\varnothing 4,0 - 6,0$ mm
<p>Unique cutting edge shape with high quality and sharpness</p> <p>Internal coolant hole (standard)</p>	<p>2 corner inserts</p> <p>Internal coolant hole (standard)</p>
<p>Clamp screws Sleeve Location pin Boring bar</p>	<p>Clamp screws Sleeve Location pin Boring bar</p>
<p>Excellent repeatability of boring bar (deviation within 0,020 mm)</p> <p>Clamp screws Location pin for controlled cutting edge position</p>	

## ■ Application Range

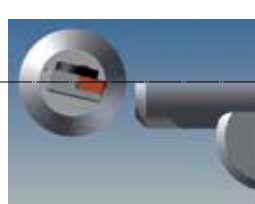

## ■ Recommended Cutting Conditions

Spindle Speed (n)	$>2000 \text{ min}^{-1}$	Low speed may cause chattering and chipping on the cutting edge.
Depth of Cut ( $a_p$ )	0,01 – 0,15 mm	Excessive depth of cut may cause larger tool deflection resulting in deterioration of bore accuracy.
Feed Rate (f)	0,01 – 0,1 mm/rev	-

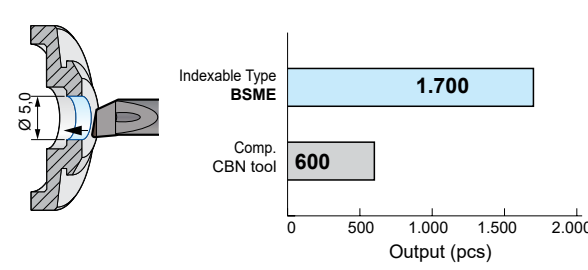

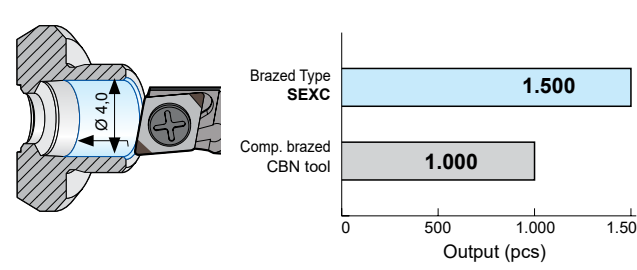

■ Accessories

■ Mounting Instruction

<p>1. Insert alignment tool into the sleeve until you connect with the pin inside. Gently lock the screws to hold.</p>	
<p>2. Locate the sleeve into your tool-holding system. Gently lock the screws to hold.</p>	
<p>3. Clock the flat of the alignment tool into a straight position.</p> 	<p>After adjustment, equipped boring bar has automatically cutting peak height of zero on the center of tool.</p> 
<p>4. Use pre setting machine to set the diameter of the boring bar.</p>	

■ Application Example

BSME Hardened Alloy Steel Valve Component	SEXC Bearing Steel Small Automotive Component
<p>The BSME type provides stable machining. Tool life is over 2 times longer than competitor's CBN tool.</p>  <p>Indexable Type <b>BSME</b> 1.700                      Comp. CBN tool 600                      Output (pcs)</p>	<p>The SEXC type provides drastically reduced tool costs. Tool life is 1,5 times longer than competitor's brazed CBN tool.</p>  <p>Brazed Type <b>SEXC</b> 1.500                      Comp. brazed CBN tool 1.000                      Output (pcs)</p>
<p>Work Material: Hardened alloy steel valve component (automotive component)                      Tool: BSME R50020D2S6                      Grade: BN2000                      Cutting Conditions: <math>v_c = 135</math> m/min  <math>f = 0,02</math> mm/rev  <math>a_p = 0,10</math> mm                      Dry</p>	<p>Work Material: Bearing steel small automotive component (60 HRC)                      Holder: E06D2 SEXC R/L03-04P                      Insert: ECXA 030X02LF (BN2000)                      Cutting Conditions: <math>v_c = 50</math> m/min (4.000 rpm)  <math>f = 0,02</math> mm/rev  <math>a_p = 0,02</math> mm                      Wet</p>

## ■ Spare Parts

Screw	Wrench
BT 0404	TH 020

## ■ Recommended Cutting Conditions

Work Material	SUMIBORON BN250		Notes
Hardened steels (H <sub>R</sub> C45-68)	Cutting speed (v <sub>c</sub> )	30-150 m/min	Low speed may cause chattering in cutting process and chipping occurrence on the cutting edge.
	Feed rate (f)	0,03-0,1 mm/rev	-
	Depth of cut (a <sub>p</sub> )	0,03-0,2 mm	Excessive depth of cut may cause larger deformation of tool, resulting in deterioration of bore accuracy.

## ■ Precaution On Use

- Adjust overhang to achieve absolute minimum.
- For use of a small diameter brazed boring tool, select high speed and small feed rate, as much as possible.

Cutting speed	80–120 m/min
Feed rate	0,03–0,1 mm/rev
Depth of cut	0,03–0,2 mm

## Holders Performance Area

Work material: Alloy steel (HRC 60)  
 Cutting conditions:  $v_c = 100$  m/min  
 $f = 0,1$  mm/rev  
 $a_p = 0,2$  mm

# SUMIBORON Grooving Tool Holder GWB / PSC Type

## ■ Features

### Tangential insert

80 degree tangentially mounted insert improves rigidity

### Double clamping system

The double clamping system increases stability so even axial feeds are possible.

### Coated CBN grade BNC30G

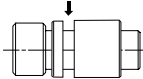

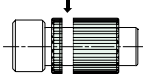

Tough new coated CBN grade for interrupted hard grooving

### Wide insert range 1,5–6,0 mm

Wide range of width's and grades for continuous and interrupted cut grooving operations

## ■ Grades

Grade	Application	Features
BN250	Continuous grooving 	Uncoated CBN grade for continuous cut grooving applications
BNC30G	Interrupted grooving 	Tough new CBN coated grade developed for interrupted cut grooving applications

### ■ Edge Selection Guide

\*2 Edge length GX type = 9,0 mm

- **Reduces Running Costs by Drastically Increasing Blade, Insert Regrinding Allowance (to 1,0 mm)**

Assuming 0,2 mm of regrinding each time, an edge can be used up to 6 times. (Peripheral edge cannot be reground.)

If you wish to use reground blades you shall use sets of blades with matching size of the same level in order to keep the balance.

## ■ Performances

### ● High-Speed / High-Efficiency Cutting

Realizes ultra-high efficiency machining with  $v_f = 30.000$  mm/min

Comparison: Cutter Diameter  $\varnothing$  100 mm

	Spindle Speed min <sup>-1</sup>	Number of Teeth	Feed Rate $v_f$ (mm/min)
ANX Series	18.000	18	32.400
Competitor	9.500	12	11.400

### ● Drastically Reduces Runout Adjustment Time

- Simple screw-fastening structure
- Enables fine adjustments to be made easily
- High-rigidity body

### ● Chip Control

### Blade-Through Coolant Chip Breaking

ALNEX ANX Series	Competitor
Work Material:	G-AlSi12Cu
Cutting Conditions:	$v_c = 2500$ m/min, $f_z = 0,05$ mm/t, $a_p = 0,5$ mm, wet

## ■ Adjustment of the Blades, Runout Alignment

Insert the blade into its seat.

While holding the blade against the seat, install the clamping bolt using the provided wrench, pre-tightening the bolt. (recommended pre-torque is 1 N·m)

Using the provided wrench for the height adjustment screw, set the height to your predetermined value.

Fully tighten the clamp bolt. (recommended torque is 2 N·m)

## ■ CVD Single Crystal Diamond SCV10 Wiper Blade

Wiper blade adopts high-strength single-crystal diamond using Sumitomo Electric Hardmetal's vapour phase synthesis technology.

Sharp cutting edge realises burr-free, mirror finish surface quality in aluminum alloy machining.

Superior wear resistance maintains cutting edge sharpness for a long time, reducing total tool costs.

## ■ Burr-free

Sharp cutting edge and excellent wear resistance suppress burrs over the long term.

## ■ Mirror Finishing

Sharp cutting edge achieves mirror finish with cutting alone.

Workpiece surface after machining

## ■ Polycrystalline Diamond SUMIDIA DA1000 / DA90

Through the ideal combination of diamond particle size and binder, SUMIDIA DA1000/DA90 possess various features and is suitable for all kinds of applications such as machining of aluminum alloy and cemented carbide.

## ■ Grades, Features and Applications

Grade	Features	Applications	Diamond share (%)	Average grain size of diamond particles (μm)	Hardness HK (GPa)	TRS (GPa)
DA1000	High-density sintered grade made of ultra-fine grain diamond that exhibits excellent wear and fracture resistance as well as edge sharpness.	Machining of High-Silicon Aluminum Alloy, Rough, Interrupt and Finish Machining of Aluminum Alloy, Woodcraft or Wooden Board Cutting/Facing, General Finishing of Non-Ferrous Metals	90–95	≤ 0,5	50–60	≈ 2,60
DA90	Contains coarser diamond particles than other grades, giving it good wear resistance suitable for the machining of carbides and high-silicon aluminum. Shows the highest diamond content for excellent wear resistance.	Machining of High-Silicon Aluminum Alloy, Machining of Aluminum Composite (MMC), Green or Semi-Sintered Cemented Carbide & Ceramic Roughing, Machining of Sintered Ceramic/Stone/Rock	90–95	≤ 50	50–65	≈ 1,10

## ■ Grade Applications

	Work Material	Applicable Grade	Example Parts
Aluminum	Sintered Aluminum, Wrought Aluminum Alloy	DA1000	Piston Liners, Machine Parts, etc.
	Alloys for Die Casting		Transmission Case, Oil Pan, Cylinder Block
	Alloys for Casting Low Si (≤ 12%)		Cylinder Head
	Alloys for Casting High Si (> 12%)		Cylinder Block
Non-ferrous metal	Non-Ferrous Sintered Alloy	DA1000	Bush
	Gunmetal, Carbon		Connecting Rod
	Fe Combined	DA90	Cylinder Block, Bearing Cap

\* Cast Iron/Aluminum Alloy

## Recommended Cutting Conditions

Si content ≤ 12,6 %

Min. - Optimum - Max.

ISO	Work Material	Hardness	Cutting Speed $v_c$ (m/min)	Feed Rate $f_z$ (mm/t)	Grade
	Aluminum Alloy	—	2.000–2.500–3.000	0,05–0,13–0,20	DA1000

Si content > 12,6 %

Min. - Optimum - Max.

ISO	Work Material	Hardness	Cutting Speed $v_c$ (m/min)	Feed Rate $f_z$ (mm/t)	Grade
	Aluminum Alloy	—	400–600–800	0,05–0,13–0,20	DA1000 DA90

Combined Milling of Cast Iron/Aluminum Alloy

Min. - Optimum - Max.

ISO	Work Material	Hardness	Cutting Speed $v_c$ (m/min)	Feed Rate $f_z$ (mm/t)	Grade
 	Cast Iron/ Aluminum Alloy	—	300–400–500	0,05–0,13–0,20	DA90

The above recommended cutting conditions are meant as a guide. Actual conditions will depend on the individual machine rigidity, work clamp rigidity, depth of cut and other factors.

## Spare Parts

Sold separately.

Applicable Cutters	Clamp Screw		Adjustment Screw	Wrench	Adjustment Wrench	Centre Bolt		Assembly Wrench

### Cutting Conditions

Cutter: SRF 50 RS  
 Insert: SNEW 09T3 ADFR-NF (DA1000)  
 n : 10.000 rpm  
 Width: 35 mm at D.O.C. indicated above

Application	SUMIDIA
High Speed / Light cut	N
General Purpose	N
Roughing	N

Cat. No.	DA1000	Cutting Edge	Fig.
SNEW 09T3 ADTR-NF	□	Standard	1
09T3 ADTR-U-NF	□	Wiper	2
09T3 ADTR-R-NF	○	Nose Radius	3

- Standard inserts and Wiper inserts can be used on the same cutter body.
- Standard inserts with nose radius should be used where vibration is present. As such, Wiper-inserts will not be applicable.
- Inserts can be regrind 3 times (up to minimum IC diameter 9,225 mm).
- When using reground inserts, it is advisable to reconfirm insert height and cutting diameter with a tool pre-setter.
- Do not mix new and reground inserts, or even inserts with different regrind amount on the same cutter.

### Recommended Cutting Conditions for RF and SRF Type Cutters

Work Material	Process	Grade	Cutting Speed (m/min)		Feed Rate (mm/tooth)	Depth of Cut (mm)		
			RF Type	SRF Type		RF Type	SRF Type	
Aluminium Alloy	Si < 13 %	Finishing	DA1000 (PCD)	2.000-5.000	- 4.000	0,05-0,2	- 3,0	- 5,0
		Roughing	H1 (Carbide)	1.000-2.500	-			
	Si ≥ 13 %	Finishing	DA1000 (PCD)	400-800	- 800			
		Roughing	H1 (Carbide)	200-400	-			

# SUMIBORON "BN Finish Mill" FMU Type

## High Speed Finishing of Grey Cast Iron

### ■ Features

- High speed machining  $v_c = 1.500 \text{ m/min}$
- Excellent surface roughness  $R_z = 3,2$  ( $R_a = 1,0$ )
- Safety structure for the centrifugal force under high speed cutting conditions
- Run-out is less than  $10 \mu\text{m}$
- Easy assembling method using the setting gauge
- Running cost is reduced because of economical insert

### ■ Application

GG25 – GG30 (HB200 – 250) grey cast iron with pearlite matrix, and ferrite matrix (HB130 – 160)  
Application examples: engine block, cylinder block, etc

### ■ Specifications

FMU Type:  $\varnothing 80\text{--}\varnothing 315 \text{ mm}$   
Insert: SNEW1203ADTR/L  
Low cutting force type: SNEW1203ADTR/L-S

### ■ Recommended Cutting Conditions

Speed:  $v_c = 800\text{--}2000 \text{ m/min}$   
Feed:  $f_z = 0,1\text{--}0,3 \text{ mm/tooth}$   
Depth:  $a_p = 0,5 \text{ mm}$  or less  
Dry cutting

### ■ Performance

#### ● Tool Life Diagram

#### ● Estimated Tool Life

- Milling of ductile cast iron and alloy steel casting do not produce the best results.
- Dry cutting is recommended. Wet cutting will result in chipping of cutting edges in the early stages due to thermal cracking.

### Recommended Cutting Conditions

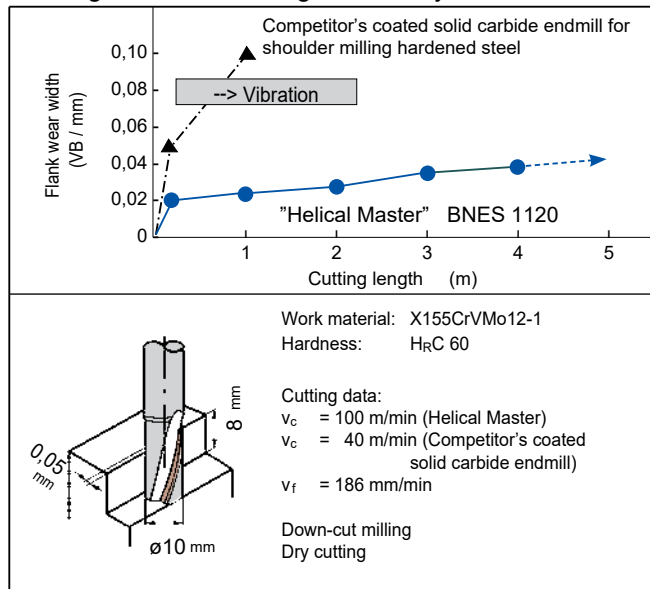

Cutting speed:  $v_c$  (m/min), Spindle revolutions:  $n$  (rpm), Feed per tooth:  $f_z$  (mm/tooth), Feed speed:  $v_f$  (mm/min)

Tooling example 	DC	Hardened steel (HRC 50–57)			Hardened steel (HRC 58–65)		
		$v_c = 100-170$ m/min			$v_c = 80-150$ m/min		
		$a_e \leq$	$n =$	$V_f$ (mm/min) =	$a_e \leq$	$n =$	$V_f$ (mm/min) =
$\phi 6-8$	$a_e \leq 0,1$ mm	$n = 4000-9000$	$V_f$ (mm/min) = 240-540	$a_e \leq 0,08$ mm	$n = 3200-8000$	$V_f$ (mm/min) = 150-370	
$\phi 10-12$	$a_e \leq 0,15$ mm	$n = 2700-5400$	$V_f$ (mm/min) = 180-360	$a_e \leq 0,12$ mm	$n = 2100-4800$	$V_f$ (mm/min) = 120-270	
$\phi 14-16$	$a_e \leq 0,2$ mm	$n = 2000-3800$	$V_f$ (mm/min) = 140-260	$a_e \leq 0,15$ mm	$n = 1600-3400$	$V_f$ (mm/min) = 110-230	

Recommendation: Dry cutting (Air coolant)  
Down-cut milling  
Minimise the overhang  
Use a rigid machine

### Performance

#### Long Tool Life and High Efficiency

#### Excellent Surface Roughness

■ Characteristics / Application

- High precision machining of hardened steels < HRC 70 with long tool life
- Super tough grade SUMIBORON BN350 prevents chipping of the cutting edge
- R accuracy : ±0,005 mm

■ Endmills

# SUMIDIA Drills

## DAL/DDL/DML Type

From general to High Precision Drilling of Aluminum Alloys!

- High precision DAL type is able to produce holes of IT Class of 7 – 8.
- General DDL type is able to produce holes of IT class of 11 – 12, mainly for drilling of pre-tap holes.
- DML type is DDL type with a chamfer edge, incorporating 2 processes in one operation.

### ■ DAL Type

Cat. No.	DA2200	DC (DMM)	LCF	OAL	PL

## Basics of Turning

### Calculating Power Requirement

$P_c = \frac{a_p \cdot f \cdot v_c \cdot K_c}{60 \times 10^3 \times \eta}$	$P_c$ : Net power requirement (KW) $v_c$ : Cutting speed (m/min) $f$ : Feed rate (mm/rev) $a_p$ : Depth of cut (mm) $\eta$ : Machine efficiency (0,70 ~ 0,85) $K_c$ : Specific cutting force (N/mm <sup>2</sup> ) $H$ : Required horsepower (HP)
$H = \frac{P_c}{0,75}$	
<b>● Rough value of specific cutting force (<math>K_c</math>)</b>	
General steel : 2.500 ~ 3.000 N/mm <sup>2</sup> Cast iron : 1.500 N/mm <sup>2</sup> Aluminum : 800 N/mm <sup>2</sup>	

### Cutting Force

$F_1$  : Principal force  
 $F_2$  : Feed force  
 $F_3$  : Back force

**● Calculating cutting force**

$P = K_c \cdot q$	$P$ : Cutting force (N) $K_c$ : Specific cutting force (N/mm <sup>2</sup> )
$= \frac{K_c \times a_p \times f}{1000}$	$q$ : Chip area (mm <sup>2</sup> ) $a_p$ : Depth of cut (mm) $f$ : Feed rate (mm/rev)

### Cutting Speed and Cutting Force

### Rake Angle and Cutting Force

### Calculating Cutting Speed

**① Calculating rotational speed from cutting speed**

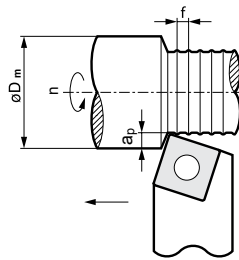

$n = \frac{1000 \cdot v_c}{\pi \cdot D}$	$n$ : Spindle speed (min <sup>-1</sup> ) $v_c$ : Cutting speed (m/min) $D$ : Diameter of workpiece (mm) $\pi \approx 3,14$
--	---

(Eg.)  $v_c = 150$  m/min,  $D = 100$  mm

$$n = \frac{1000 \times 150}{3,14 \times 100} = 478 \text{ (min}^{-1}\text{)}$$

**② Calculating cutting speed from rotational speed**

$v_c = \frac{\pi \cdot D \cdot n}{1.000}$	Refer to the above table
---	--------------------------

$n$  : Spindle speed (min<sup>-1</sup>)  
 $v_c$  : Cutting speed (m/min)  
 $f$  : Feed rate (mm/rev)  
 $a_p$  : Depth of cut (mm)  
 $D_m$  : Diameter of workpiece (mm)

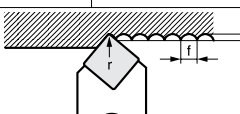

### Feed Rate and Specific Cutting Force (For carbon steel)

### Roughness

**● Theoretical Surface Finish**

$R_z = \frac{f^2}{8 \times r}$	$R_z$ : Surface finish (mm) $f$ : Feed rate (mm/rev) $r$ : Nose radius (mm)
--------------------------------	---

**● Actual surface roughness**

Steel : Theoretical surface finish x 1,5–3  
 Cast iron : Theoretical surface finish x 3–5

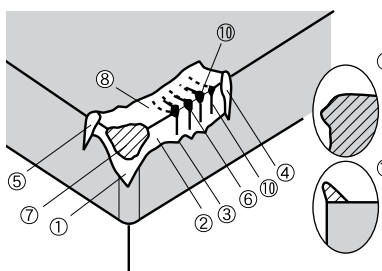

**● Ways to Improve Surface Finish**

- Use an insert with a larger nose radius.
- Optimize the cutting speed and feed rate so that built-up edge does not occur.
- Select an appropriate insert grade.
- Use wiper insert.

### Nose Radius and Cutting Force

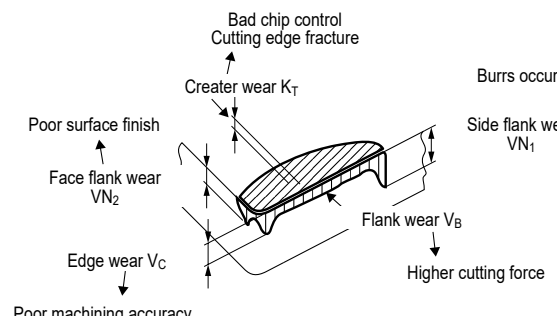

## Forms of Tool Failures

	Cat.	No.	Name of Failure	Cause of Failure
	Resulting from Mechanical causes	1-5	6	Flank Wear
		7	Chipping Fracture	Fine breakages caused by high cutting loads or chattering.
				Due to the impact of an excessive mechanical force acting on the cutting edge.
Resulting from Chemical reactions	8	8	Crater Wear	Swarf chips removing tool material as it flow over the top face at high temperatures.
	9	9	Plastic Deformation	Cutting edge is depressed due to softening at high temperatures.
	10	10	Thermal Crack	Fatigue from rapid, repeated heating and cooling cycles during machining.
	11	11	Built-up Edge	Work material is pressure welded on the top face of the cutting edge.

## Tool Wear

### Forms of Tool Wear

Bad chip control  
Cutting edge fracture

Creater wear  $K_T$

Burs occur

Side flank wear  $V_{N1}$

Flank wear  $V_B$

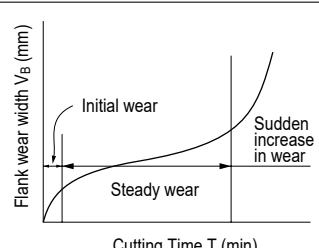

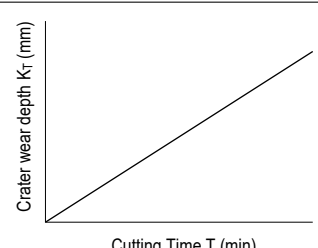

Higher cutting force

Poor surface finish

Face flank wear  $V_{N2}$

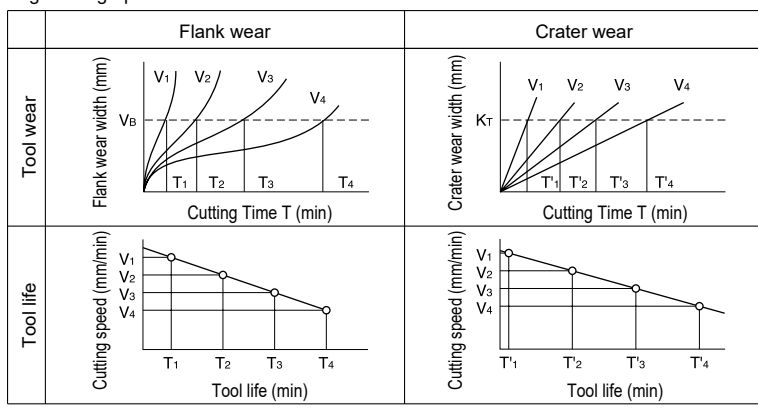

Edge wear  $V_c$

Poor machining accuracy  
Burs occur

Flank wear	Crater wear
	
<p>Wear is rapid initially, then it proceeds more gradually in proportion with cutting time until a certain limit, beyond which it increases rapidly again.</p>	<p>Crater wear is more progressive with no sudden breakdown pattern.</p>

## Tool Life (V-T)

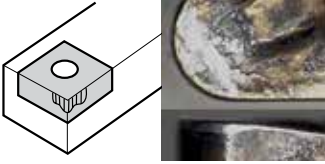

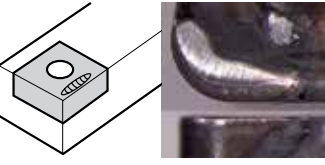

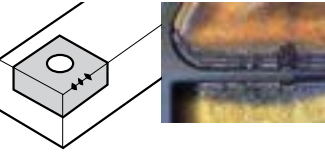

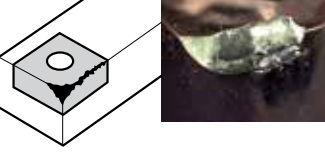

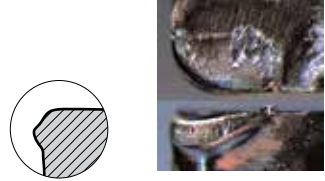

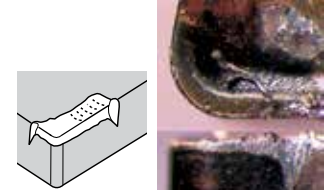

Measure the relative tool lives of the specified wear, over a range of cutting speeds, then plot the tool life along the X-axis and the cutting speed along the Y-axis on a double logarithm graph.

# Technical Guidance

## Tool Failure and Remedies

### ■ Trouble Shooting Guide for Turning

	Damage	Cause	Countermeasures
Tool Edge Failure	<p>Excessive flank wear</p> 	<ul style="list-style-type: none"> <li>- Grade lacks wear resistance.</li> <li>- Cutting speed is too fast.</li> <li>- Feed rate is far too slow.</li> </ul>	<ul style="list-style-type: none"> <li>- Select a wear resistant grade. ## ■ Type of Chip Generation

	a	b	c	d
Shape				
Condition	Continuous chips with good surface finish.	Chip is sheared and separated by the shear angle.	Chips appear to be torn from the surface.	Chips crack before reaching the cutting point.
Application	Steel, Stainless steel	Steel, Stainless steel (Low speed)	Steel, Cast iron (Very low speed, very small feedrate)	Cast iron, Carbon
Influence factor	Easy ← Work deformation → Difficult Large ← Rake angle → Small Small ← D.O.C. → Large Fast ← Cutting speed → Slow			

## ■ Type of Chip Control

Feed rate	A	B	C	D	E
Large feed rate					
Small feed rate					
NC lathe (For automation)	×	×	○	○	△
General lathe (For safety)	×	○	○	○ ~ △	×

Good : C type, D type

Poor {  
 A type : Twines around the tool or workpiece, damages the machined surface and affects safety.  
 B type : Bulky, causes problems in the automatic chip conveyor and chipping occurs easily.  
 E type : Causes spraying of chips, poor machined surface due to chattering, chipping, large cutting force and high temperatures.

## ■ Factor of Improvement Chip Control

### ① Increase feed rate

When feedrate increase, chips become thick and chip control improves.

### ② Decrease side cutting edge angle

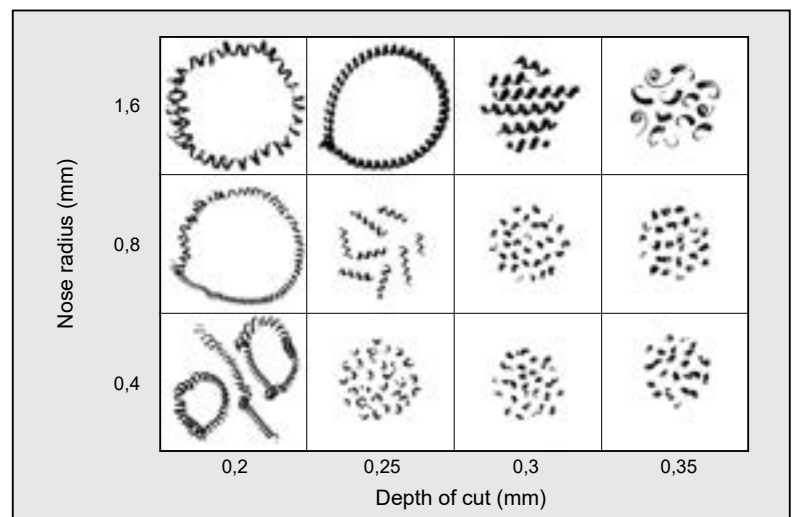

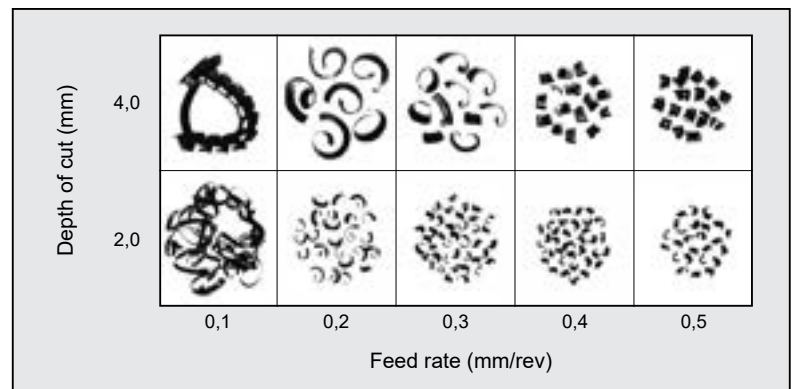

Even if feed rate is the same, smaller side cutting edge angle makes chips thick and chip control improves.

### ③ Decrease nose radius

Even if depth of cut is the same, smaller nose radius makes chip thick and chip control improves.

\* Cutting resistance increases in proportion with the width of the contact surface. Therefore, with a larger nose radius, cutting resistance and back force increases, chattering may also occur. However, with the same feedrate, a smaller nose radius would produce a poorer surface finish.

# Technical Guidance

## Basics of Milling

### Parts of a Milling Cutter

### Power Requirement

#### Calculating cutting force

$$P_c = \frac{a_p \cdot a_e \cdot v_f \cdot K_c}{60 \times 10^6 \times \eta} \text{ (kW)}$$

#### Horsepower

$$H = \frac{P_c}{0,75}$$

#### Chip removal amount

$$Q = \frac{a_p \times a_e \times v_f}{1.000} \text{ (cm}^3\text{/min)}$$

$P_c$  : Net power requirement (kW)

$H$  : Horsepower requirement (HP)

$Q$  : Chip removal amount (cm<sup>3</sup>/min)

$a_e$  : Cutting width (mm)

$v_f$  : Feed speed (mm/min)

$a_p$  : Depth of cut (mm)

$\eta$  : Machine efficiency (0,70 ~ 0,85)

$K_c$  : Specific cutting force (N/mm<sup>2</sup>)

Eg. rough value

( Steel : 2.500 ~ 3.000  
Cast iron : 1.500 )

#### Relation between feed rate, work material, specific cutting force

#### Calculating cutting speed

$$v_c = \frac{\pi \times D \times n}{1.000}$$

$v_c$  : Cutting speed (m/min)

$\pi \approx 3,14$

$D$  : Cutter diameter (mm)

$n$  : Rotation speed (rpm)

$v_f$  : Feed speed (mm/min)

$f_z$  : Feed rate (mm/tooth)

$Z$  : Number of teeth

#### Calculating feed rate

$$v_f = f_z \times Z \times n$$

$$f_z = \frac{v_f}{Z \times n}$$

### Functions of the Various Cutting Angles

	Description	Code	Functions	Influences
①	Axial rake angle	$\gamma_y$	Controls chip removal direction, effects adhesion of the chips and thrust force etc.	Rake angles can vary from positive to negative (large to small) with typical combinations of positive and negative, positive and positive or negative and negative configurations.
②	Radial rake angle	$\gamma_x$		
③	Approach angle	$\kappa$	Controls chip thickness and chip removal direction	The effect of the small approach angle is to reduce the chip thickness and cutting force.
④	True rake angle (Effective rake angle)	$\gamma$	Controls cutting performance and ability to retain a cutting edge	<ul style="list-style-type: none"> <li>- With a positive (large) angle, cutting ability and adhesion resistance are improved but the strength of the cutting edge is weakened.</li> <li>- With negative (small) angle, the strength of the cutting edge is improved but chips will tend to adhere more easily.</li> </ul>
⑤	Inclination angle	$\lambda$	Controls chip removal direction	- With a positive (large) angle, the chip removal is satisfactory with less cutting resistance but the strength of the corner is weaker.
⑥	Wiper flat clearance angle	$\alpha_f$	Controls surface finish	A smaller clearance angle will produce a better surface finish.
⑦	Clearance angle	$\alpha$	Controls edge strength, tool life and chattering, etc	

Example in using the above chart:	Solution:
① $\gamma_y$ : Axial rake angle = +10°	True rake angle
② $\gamma_x$ : Radial rake angle = -30°	④ $\gamma = -8^\circ$
③ $\kappa$ : Approach angle = 30°	

Formula :  $\tan \gamma = \tan \gamma_x \cdot \sin \kappa + \tan \gamma_y \cdot \cos \kappa$

Example in using the above chart :	Solution:
① $\gamma_y$ : Axial rake angle = -10°	Inclination angle
② $\gamma_x$ : Radial rake angle = +10°	⑤ $\lambda = -15^\circ$
③ $\kappa$ : Approach angle = 65°	

Formula :  $\tan \lambda = \tan \gamma_y \cdot \sin \kappa - \tan \gamma_x \cdot \cos \kappa$

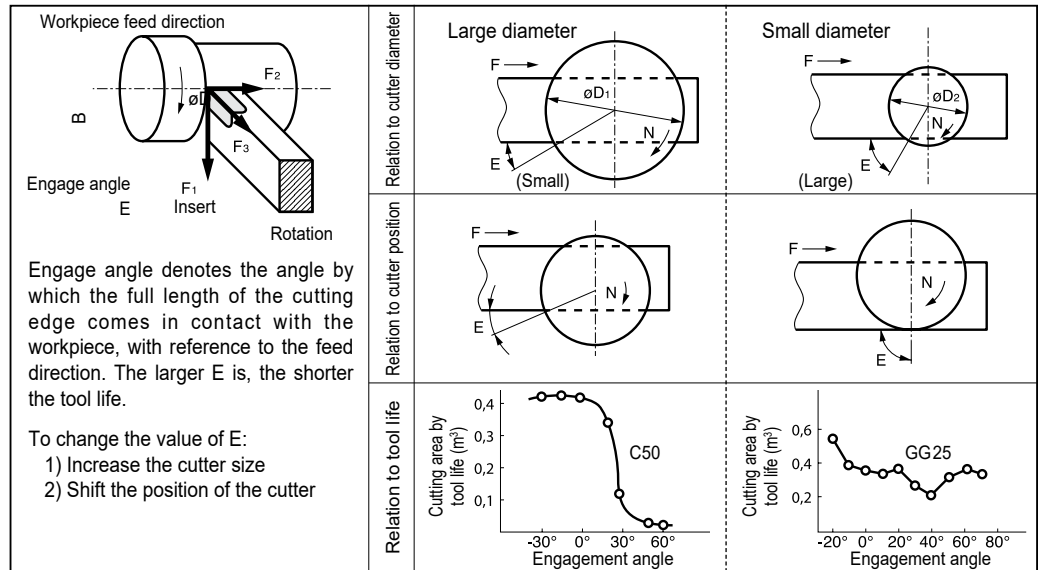

### Rake Angle Combination

	Negative - Positive Type	Double Positive Type	Double Negative Type
The effects of the various angle configurations with relation to chip formation and chip removal.			
Advantage	Excellent chip removal and good cutting action	Good cutting action	Double-sided inserts can be use and higher cutting edge strength
Disadvantage	Only single-sided inserts can be use	Lower cutting edge strength and only single-sided inserts can be use	Dull cutting action
Application	For Steel, Cast iron, Stainless steel, Alloy steel	For general milling of steel For low rigidly work piece	For light milling of cast iron and steel
Typical cutter	WGX, WGC, UFO	DPG	DNX, DGC, DNF
Chips (Eg.) Workpiece: 37Cr4 $v_c = 130$ m/min $f_t = 0.23$ mm/tooth $a_p = 3$ mm			

# Technical Guidance

## Basics of Milling

### Relation Between Engage Angle and Tool Life

### Relation between the number of simultaneously engaged cutting edges and cutting force:

### To Improve Surface Roughness

#### ① Milling inserts with wiper flat

When all the cutting edges have wiper flats, a few teeth are intentionally elevated to play the role of a wiper insert.

- Insert equipped with straight wiper flat (Face angle: Approx 15' - 1°)
- Insert equipped with curved wiper flat (Eg. curvature R500)

#### ● Surface roughness without wiper flat

#### ● Surface roughness with straight wiper flat

h : Projected value of wiper insert  
 Steels : 0,05 mm  
 Al : 0,03 mm

f : Feed rate per revolution

Hc : Surface roughness with only normal teeth  
 Hw : Surface roughness with wiper insert

#### ● Influence of different face angles on surface finish

- Workpiece: 34CrMo4  
 - Cutter: DPG 5160 R (Single tooth)

-  $v_c = 154$  m/min  
 $f_z = 0,234$  mm/tooth  
 $a_p = 2$  mm

- Face angle  
 (A) : 28'  
 (B) : 6'

#### ② Integral wiper insert system

A system to protrude one or two inserts (wiper insert) with a smooth curved edge just a little beyond the other teeth to wipe the milled surface.

- (Applies to WGC, RF types etc.)

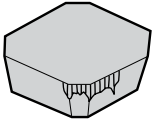

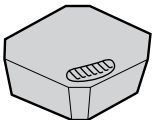

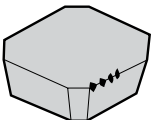

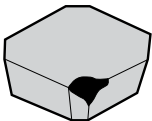

#### ● Effects of having wiper insert (example)

- Workpiece: GG25  
 - Cutter: DPG 4100 R  
 - Insert: SPKN 1203  
 - Axial run-out: 0,015 mm  
 - Radial run-out: 0,04 mm

-  $v_c = 105$  m/min  
 $f_z = 0,29$  mm/tooth (1,45 mm/rev)  
 (C) : Only normal teeth  
 (D) : with 1 wiper insert

# Technical Guidance

## Basics of Endmilling

### Parts of an Endmill

### Calculating Cutting Conditions

#### ● Cutting speed

$$v_c = \frac{\pi \cdot D \cdot n}{1.000} \quad n = \frac{1.000 \cdot v_c}{\pi \cdot D}$$

#### ● Feed rate

$$v_f = f \times n$$

$$v_f = f_z \times z \times n \quad f_z = \frac{v_f}{z \times n}$$

#### ● Depth of cut (D.O.C)

$a_p$  : Axial D.O.C. (depth)  
 $a_e$  : Radial D.O.C. (width)

#### ● Notch width ( $D_1$ )

$$D_1 = 2 \times \sqrt{2 \times R \times a_p - a_p^2}$$

#### ● Cutting speed and feedrate are calculated using the same formula as square endmill.

Side milling

$v_c$  : Cutting speed (m/min)

$\pi \approx 3,14$

$D$  : Endmill diameter (mm)

$n$  : Rotational speed ( $\text{min}^{-1}$ )

$v_f$  : Feed speed (mm/min)

$f_r$  : Feed rate per revolution (mm/rev)

$f_z$  : Feed rate per tooth (mm/tooth)

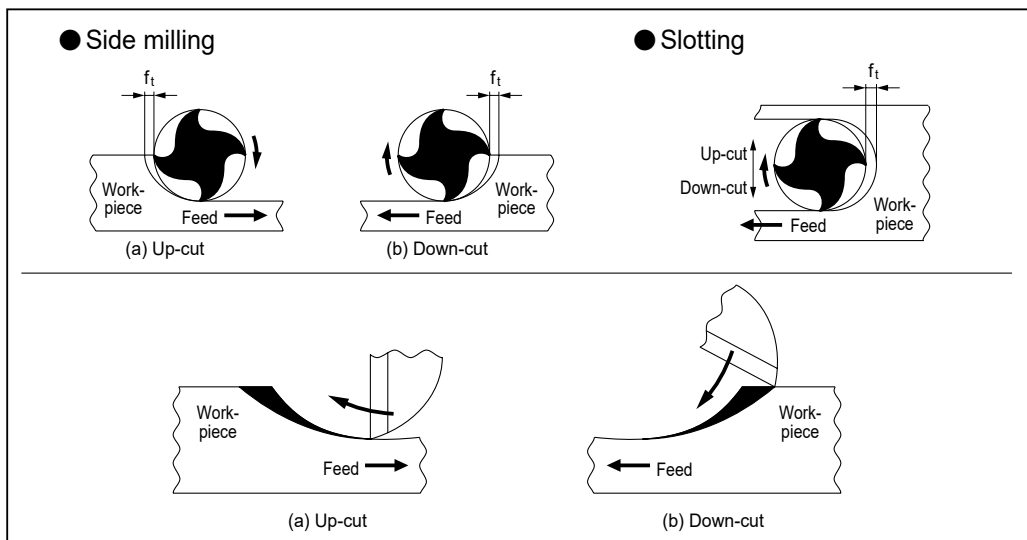

$z$  : Number of teeth

Slotting

(Ball Endmill)

### Up-cut and Down-cut

### Relation Between Cutting Condition and Deflection

Endmill			Side milling		Slotting					
			Work material: Pre-hardened steel (40HRC) Cutting data: $v_c = 25$ m/min $a_p = 12$ mm $a_e = 0,8$ mm		Work material: Pre-hardened steel (40HRC) Cutting data: $v_c = 25$ m/min $a_p = 8$ mm $a_e = 8$ mm					
Cat. No.	Number of teeth	Helix angle	Feed rate		Feed rate		Feed rate		Feed rate

## Tool Failure and Remedies

### ■ Trouble Shooting Guide for Endmilling

Failure		Cause		Remedies
Cutting Edge Failure	Excessive Wear	Cutting Conditions Tool Shape Tool Material	<ul style="list-style-type: none"> <li>- Cutting speed is too fast</li> <li>- Feed rate is too fast</li> <li>- The flank relief angle ist too small</li> <li>- Insufficient wear resistance</li> </ul>	<ul style="list-style-type: none"> <li>- Decrease cutting speed and feed rate.</li> <li>- Change to an appropriate flank relief angle.</li> <li>- Select a substrate with more wear resistance</li> <li>- Use a coated tool</li> </ul>
	Chipping	Cutting Conditions Machine Area	<ul style="list-style-type: none"> <li>- Feed rate ist too fast</li> <li>- Cutting depth is too deep</li> <li>- Tool overhang ist too long</li> <li>- Work clamps are weak</li> <li>- Tool is not firmly attached</li> </ul>	<ul style="list-style-type: none"> <li>- Decrease cutting speed.</li> <li>- Reduce depth of cut</li> <li>- Adjust tool overhang for correct length</li> <li>- Clamp the work piece firmly</li> <li>- Make sure the tool is seated in the chuck properly</li> </ul>
	Tool Fracture	Cutting Conditions	<ul style="list-style-type: none"> <li>- Feed rate ist too fast</li> <li>- Cutting depth is too deep</li> <li>- Tool overhang ist too long</li> <li>- Cutting edge is too long</li> </ul>	<ul style="list-style-type: none"> <li>- Decrease cutting speed.</li> <li>- Reduce depth of cut</li> <li>- Reduce tool overhang as much as possible</li> <li>- Select a tool with a shorter cutting edge</li> </ul>
Others	Shoulder Deflection	Cutting Conditions Tool Shape	<ul style="list-style-type: none"> <li>- Feed rate is too fast</li> <li>- Cutting depth is too deep</li> <li>- Tool overhang is too long</li> <li>- Cutting on the down-cut</li> <li>- Helix angle is large</li> </ul>	<ul style="list-style-type: none"> <li>- Decrease cutting speed.</li> <li>- Reduce depth of cut</li> <li>- Adjust tool overhang for correct length</li> <li>- Change directions to up-cut</li> <li>- Use a tool with a smaller helix angle</li> </ul>
	Unsatisfactory Machined Surface Finish	Cutting Conditions	<ul style="list-style-type: none"> <li>- Feed rate is too fast</li> <li>- Packing of chips</li> </ul>	<ul style="list-style-type: none"> <li>- Decrease cutting speed.</li> <li>- Use air blow</li> <li>- Use an insert with a larger relief pocket.</li> </ul>
	Chattering	Cutting Conditions Tool Shape Machine Area	<ul style="list-style-type: none"> <li>- Cutting speed is too fast</li> <li>- Cutting on the up-cut</li> <li>- Tool overhang is too long</li> <li>- Rake angle is large</li> <li>- Work clamps are weak</li> <li>- Tool is not firmly attached</li> </ul>	<ul style="list-style-type: none"> <li>- Decrease cutting speed.</li> <li>- Change directions to down-cut</li> <li>- Adjust tool overhang for correct length</li> <li>- Use a tool with an appropriate rake angle</li> <li>- Clamp the work piece firmly</li> <li>- Make sure the tool is seated in the chuck properly</li> </ul>
	Packing of Chip	Cutting Conditions Tool Shape	<ul style="list-style-type: none"> <li>- Feed rate is too fast</li> <li>- Cutting depth is too deep</li> <li>- Too many teeth</li> <li>- Packing of chips</li> </ul>	<ul style="list-style-type: none"> <li>- Decrease cutting speed.</li> <li>- Reduce depth of cut</li> <li>- Reduce number of teeth</li> <li>- Use air blow</li> </ul>

## Parts of a Drill

### Point Angle and Force

When point angle is large, thrust becomes large but torque becomes small.

### Min. Requirement Relief Angle

### Width of Edge Treatment and Cutting Force

### Point Angle and Burr

When point angle is large, burr height becomes low.

### Web Thickness and Thrust

### Decrease Chisel Width by Thinning

# Technical Guidance

## Basics of Drilling

### Reference of Power Requirement and Thrust

### Cutting Condition Selection

- Control cutting force for low rigid machine

The following table shows the relation between edge treatment width and cutting force. If a problem caused by cutting force occurs, reduce either the feedrate or the edge treatment width.

Condition		Edge treatment width			
		0,15 mm		0,05 mm	
$V_c$ (m/min)	$f$ (mm/rev)	Torque (N•m)	Thrust (N)	Torque (N•m)	Thrust (N)
40	0,38	12,8	2820	12,0	2520
50	0,30	10,8	2520	9,4	1920
60	0,25	9,2	2320	7,6	1640
60	0,15	6,4	1640	5,2	1.100

Drill :  $\phi 10$   
Work material: C50 (230 HB)

- High speed machining recommendation

When there is surplus capacity with enough machine power and rigidity drilling at normal recommended cutting conditions, we recommend higher drilling speeds.

Wear example

$V_c = 60$  m/min

$V_c = 120$  m/min

Work material: C50 (230HB)  
 Cutting data:  $f = 0,3$  mm/rev  
 $a_p = 50$  mm  
 Tool life: 600 holes (Cutting length : 30 m)

### Explanation of Margins (Difference between single and double margins)

● Single Margin (2 guides: circled parts)

● Shape used on most drills

● D Double Margin (4 guides: circled parts)

● 4-point guiding reduces hole bending and undulation for improved stability and accuracy during deep hole drilling.

### Run-out Accuracy

### Peripheral Run-out Accuracy when Tool Rotates

### Peripheral Run-out Accuracy when Workpiece Rotates

### Influence of Workpiece Surface

### How to Use Long Drill

● Problem

● Remedies

# Technical Guidance

## Tool Failure and Remedies

### ■ Trouble Shooting Guide for Drilling

Failure		Basic Remedies		Remedies Examples
Drill Failure	Excessive Wear on Cutting Edge	Cutting Conditions Cutting Fluid	- Use higher cutting speeds. - Increase feed rates.  - Reduce pressure if using internal coolant. - Use cutting fluid with more lubricity.	- $V_c = 80-100$ m/min - Refer to recommended cutting conditions listed in the general catalogue.  - Below 1,5 MPa.
	Chisel Point Chipping	Tool Design Cutting Conditions Others	- Increase size of chisel width. - Increase amount of honing on cutting edge.  - Reduce depth-of cut. - Reduce feed rate at entry point.  - Improve workpiece clamping rigidity.	- $f = 0,05-0,1$ mm/rev .
	Chipping on Peripheral Cutting Edge	Tool Design Cutting Conditions Cutting Fluid Others	- Increase amount of honing on cutting edge. - Reduce the amount of front flank angle. - Reduce cutting speeds. - Increase feed rates.  - Use cutting fluid with more lubricity. - Improve workpiece clamp rigidity.	- Refer to recommended cutting conditions listed in the general catalogue.
	Margin Wear	Tool Design Cutting Conditions Cutting Fluid Others	- Increase amount of back taper. - Reduce margin width. - Reduce cutting speeds. - Increase feed rates.  - Use cutting fluid with more lubricity. - Schedule for earlier regrind.	- Refer to recommended cutting conditions listed in the general catalogue.
	Drill Breakage	Tool Design Cutting Conditions Cutting Fluid Others	- Increase amount of back taper. - Reduce margin width. - Reduce cutting speeds.  - Use cutting fluid with more lubricity. - Improve workpiece clamp rigidity.	- Refer to recommended cutting conditions listed in the general catalogue.
Unsatisfactory Hole Accuracy	Oversized Holes	Tool Design Cutting Conditions Cutting Fluid Others	- Improve overall drill rigidity. (large web, small flute). - Reduce drill point angle.  - Reduce feed rate at entry phase. - Reduce cutting speeds.  - Improve workpiece clamp rigidity. - Improve drill clamp precision. - Improve drill clamp rigidity.	- $130^\circ-120^\circ$  - $f = 0,05-0,1$ mm/rev - Refer to recommended cutting conditions listed in the general catalogue.  - Drill run-out below 0,02 mm
	Poor Surface Finish	Tool Design Cutting Conditions Cutting Fluid	- Increase amount of back taper.  - Increase cutting speeds.  - Use cutting fluid with more lubricity.	- Refer to recommended cutting conditions listed in the general catalogue.
	Holes are Not Straight	Tool Design Cutting Conditions Others	- Reduce amount of edge honing.  - Reduce feedrates.  - Improve workpiece clamp rigidity. - Improve drill clamp precision. - Improve drill clamp rigidity.	- Refer to recommended cutting conditions listed in the general catalogue.  - Drill run-out below 0,02 mm
Unsatisfactory Chip Control	Packing of Chips	Cutting Conditions Cutting Fluid	- Increase cutting speeds. - Increase feed rates.  - Reduce pressure if using internal coolant.	- Refer to recommended cutting conditions listed in the general catalogue.  - Below 1,5 MPa.
	Long Stringy Chips	Tool Design Cutting Conditions Cutting Fluid	- Reduce amount of edge honing.  - Increase feed rates.  - Reduce pressure if using internal coolant.	- Refer to recommended cutting conditions listed in the general catalogue.  - Below 1,5 MPa.

## Application Map of the Various Tool Materials

## Work Materials and Cutting Speed Recommendations

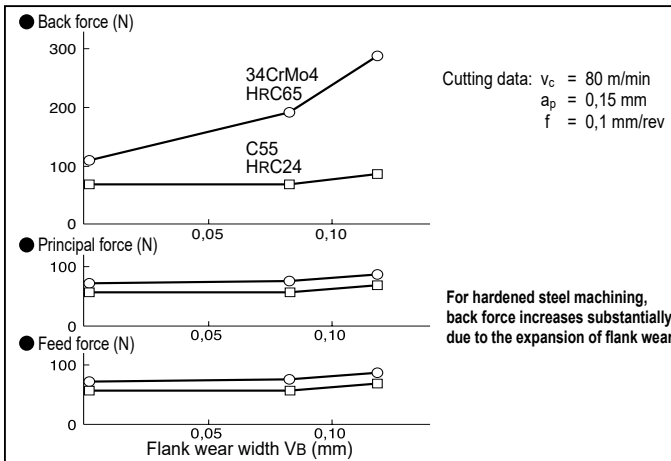

## Influence of Coolant on Tool Life

## Relation Workpiece Hardness and Cutting Forces

## Relation between Flank Wear and Cutting Force

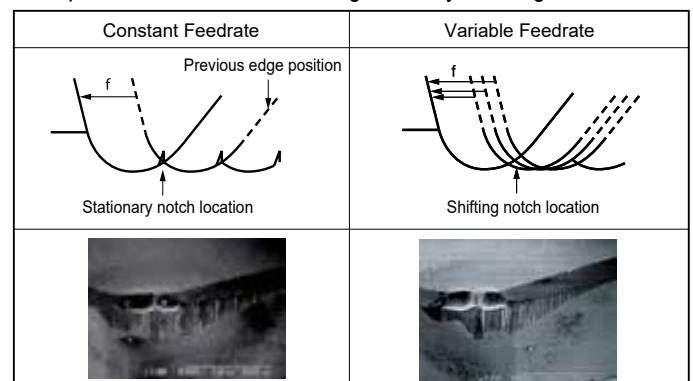

## Workpiece Hardness on Cutting Force and Accuracy

## Relation Cutting Speed and Surface Roughness

## Improvement of Surface Roughness by Altering the Feedrate

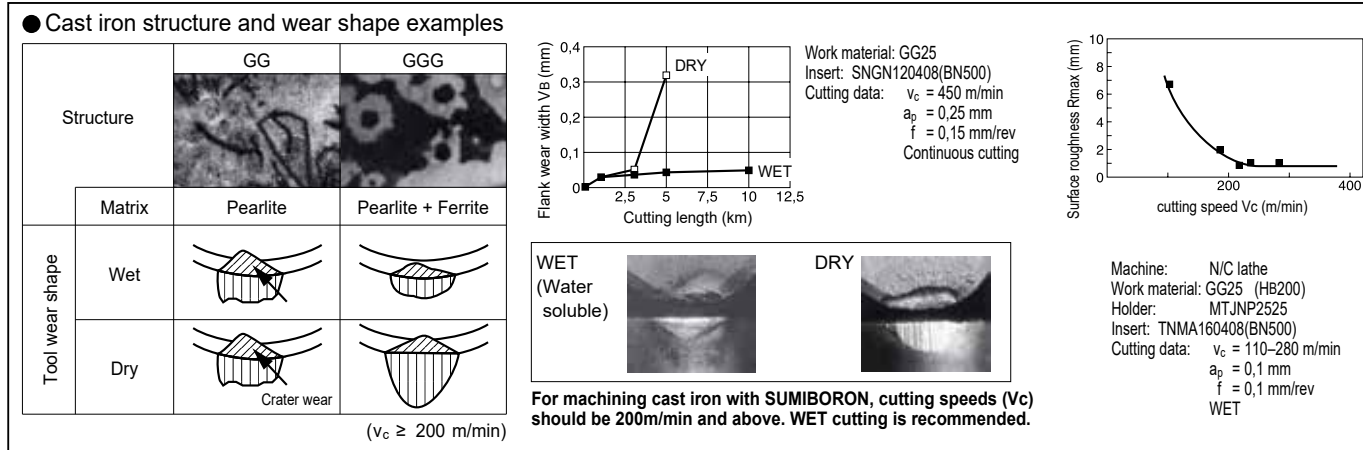

Varying the feedrate spreads the notch location over a larger area, surface finish improves and notch wear decreases.

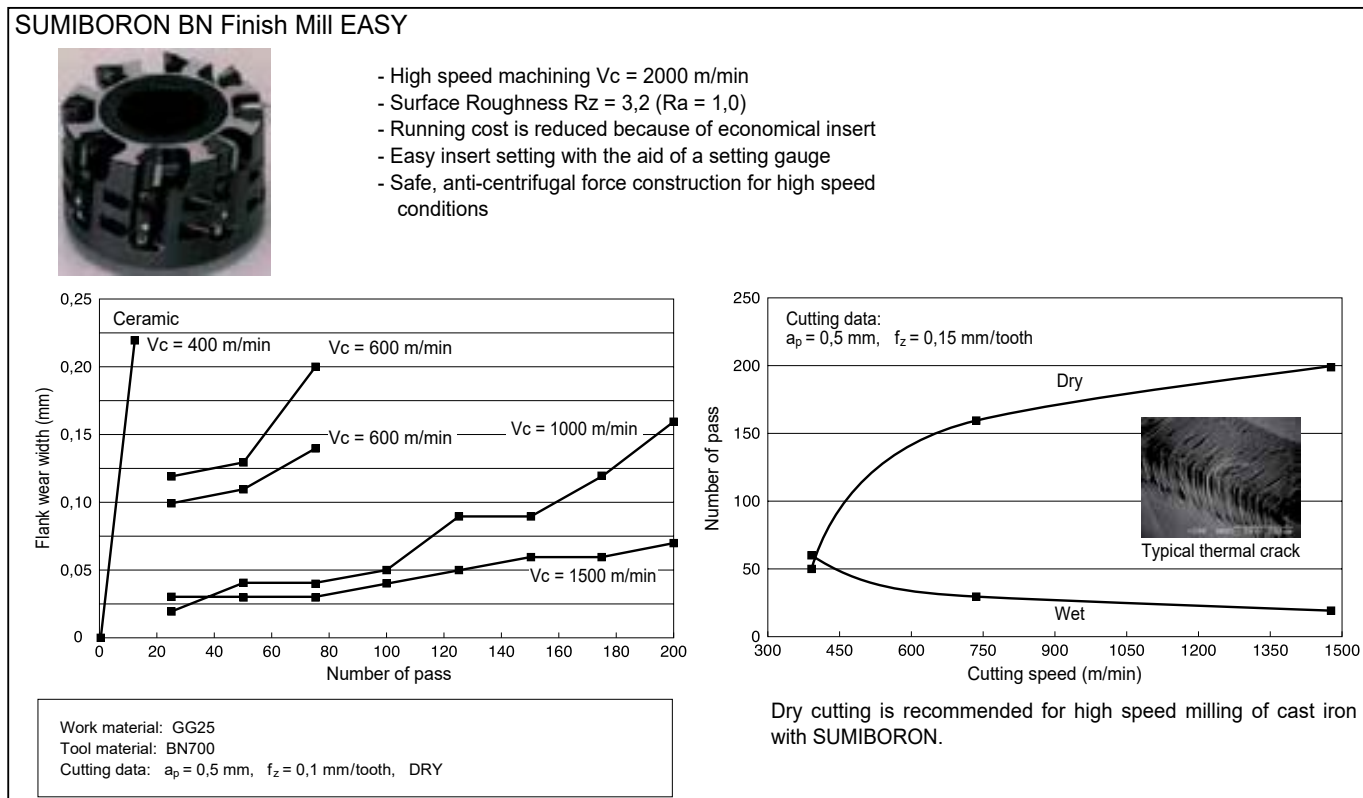

## Advantages of Using SUMIBORON for Cast Iron Machining

## Turning

## Milling

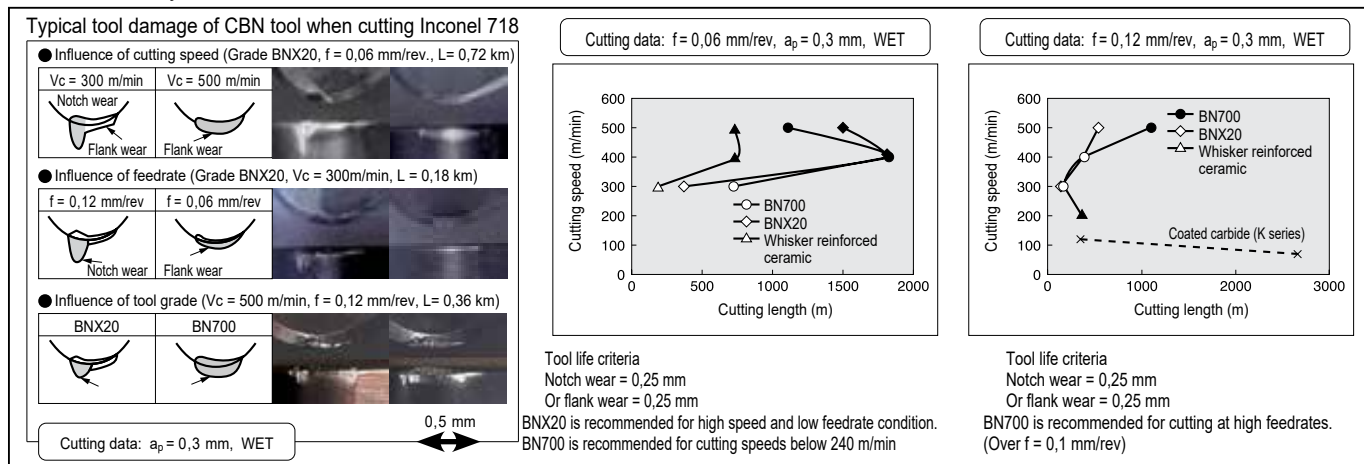

■ Powder Metal

■ Heat Resistant Alloy

● Ni based alloy

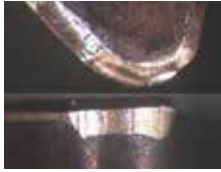

● Ti based alloy

● Hard facing alloys

		Damage	Remedies

- 1) Figures within the ( ) are not commonly used
- 2) Rockwell A, C and D scales utilise a diamond brale
- 3) 1 N/mm<sup>2</sup> = 1 MPa

## ■ Finished Surface Roughness

### ● Types of Surface Roughness Measurements

Types	Symbol	Method of Determination	Descriptive Figure
Maximum Height	* 1) Ry	This is the value (expressed in $\mu\text{m}$ ) measured from the deepest valley to the highest peak of the reference line, $\ell$ , extracted from the profile.  (Disregard unusually high peaks and deep valleys as they are considered as flaws.)	
Ten-point Mean Roughness	* 2) Rz	From the profile, extract a portion to be the reference line, $\ell$ .  Select the 5 highest peak and 5 deepest valleys. Measure the distance between the two lines and express it in $\mu\text{m}$ . (1 $\mu\text{m}$ = 0,001mm)	
Calculated Roughness	Ra	This method is to obtain a center line between the peaks and valleys within the reference line, $\ell$ . Fold along the center line to superimpose the valleys against the peaks. (Shaded portions with dashed outline on the right figure). Take the total shaded area and divided it by $\ell$ in $\mu\text{m}$ .	

Designated values of the above types of surface roughness, standard reference length values and the triangular symbol classifications are shown on the table on the right.

- \* 1) Ry : According to new JIS B 0601:2001 (Old symbol: Rz)  
 \* 2) Rz : According to new JIS B 0601:2001 (Old symbol: Rz<sub>JIS</sub>)

Designated values for * 1) Ry	Designated values for * 2) Rz	Designated values for Ra	Standard reference length values, $\ell$ (mm)	Triangular Symbols

# SAFETY INSTRUCTIONS

Target Products	Hazards	Measures
<b>General precautions for cutting tools</b>	The tools have sharp cutting edges. There is a risk of injury if held directly with bare hands.	Always wear protective equipment, such as protective tools when removing the tool from the case or mounting it onto a machine.
	Improper use or incorrect use conditions may cause the tool to break or scatter, and could cause injury.	Always use protective equipment such as safety covers and protective eyewear. Always use within the scope of the recommended conditions. Refer to the instruction manual, catalogue and other relevant documents.
	The tool could break and fly off if the cutting force increases suddenly because of impact loads or excessive wear and could cause injury.	Always use protective equipment such as safety covers and protective eyewear. Replace the tool at an early stage.
	Very hot chips could scatter or elongated chips could be discharged, and cause injury or burns.	Always use protective equipment such as safety covers and protective eyewear. When removing the chips, always stop the machine, wear protective gloves, and use tools such as nippers or clippers.
	The tool and work materials will become very hot during turning. There is a risk of burn if these are touched directly with bare hands immediately after machining.	Always wear protective equipment such as protective gloves.
	There is a risk of igniting or fires from the sparks generated during turning, or the heat generated from broken pieces and chips.	Do not use in an area where there is a risk of fires or explosions. Always provide fire prevention measures when using water-insoluble turning oil solution.
	When using at a high rotation speed, if the balance including the machine tool holder is poor, the deflection or vibration could cause tool damage and injury.	Always use protective equipment such as safety covers and protective eyewear. Always carry out trial operation, and confirm that there is no deflection, vibration or abnormal noise.
<b>General precautions for cutting edge indexable tools</b>	There is a risk of injury if you touch the burrs formed on the workpiece with bare hands.	Do not touch with bare hands.
	If insert or parts are not properly clamped, they could come off or fly off during turning and cause injury.	Clean the mounting surface and fixing parts free of foreign matter, before mounting the insert. When mounting, use the enclosed spanner and confirm that the insert and parts are securely clamped. Never use parts other than the designated inserts or parts.
	If the parts are tightened excessively with an auxiliary tool such as a pipe, the insert or part could break and come off or fly off.	Do not use auxiliary tools such as pipes. Use the enclosed spanner.
<b>Various cutters and other tools used with rotation</b>	Using the tool with high-speed rotation is extremely dangerous as the parts or inserts could fly off with the centrifugal force. Pay special attention to safety when handling.	Always use within the scope of the recommended conditions. Refer to the instruction manual, catalog and other relevant documents.
	The cutters have very sharp cutting edges. Touching these with bare hands could result in injury.	Always wear protective equipment such as protective gloves.
<b>Drills</b>	Tools could sway or vibrate if the eccentric rotation or balance is poor. There is a risk of injury if they break or fly off.	Keep the rotation speed within the scope of the recommended conditions. Periodically adjust the accuracy and balance of the rotating sections so that eccentric rotation or deflection do not occur because of bearing wear, etc.
	When machining a through hole while rotating the workpiece, a disc-shaped uncut section may fly off at the point of penetration. This disc is sharp and very dangerous.	Always use protective equipment such as safety covers and protective eyewear. Also take measures such as attaching a cover to the chuck section.
<b>Brazing tool</b>	The very small drill has a pointed end, and is very sharp. It could stab or break when directly touched with a finger, and be difficult to remove. The end could fly off if it breaks.	Take special care to safety when handling. Always wear protective gloves and protective eyewear, etc.
	There is a risk of injury if the insert comes off or breaks, etc.	Confirm that the insert is properly brazed before using. Do not use in conditions that could become very hot.
<b>Others</b>	Repeated brazing is dangerous as the insert could break during use.	Do not use an insert that has been repeatedly brazed as the strength will have dropped.
	Using this product for a purpose other than the designated application can break the machine or tool and is very dangerous.	Observe the designated usage.

Finally, this brochure describes the basic safety information. For further information, refer to the instruction manual, catalog and other relevant documents for each tool, or contact Sumitomo Electric Hardmetal. Sumitomo Electric Hardmetal will not be held liable for any damage and injuries resulting from changes to the specifications, including alterations and modifications, made without consent from Sumitomo Electric Hardmetal.

# Tool Engineering Services

In order to provide a higher level of support and satisfaction for our customers, Sumitomo Electric Industries has created the Tool Engineering Service system.

We have created several Tool Engineering Centers around the world as bases for this support. The Tool Engineering Centers provide a wide range of support to assist user manufacturing activities, with services including training (at the Center), test cuts, technical consulting, line diagnostics (at the user's site) and tooling proposals.

## Tool Engineering Center Locations

### Japan

- ▶ Itami Tool Engineering Center (I-TEC)
- ▶ Yokohama Tool Engineering Center (Y-TEC)
- ▶ Hokkaido Igetalloy Tool Engineering Center (H-TEC)
- ▶ Tokai Tool Engineering Center (T-TEC)
- ▶ Kyushu Tool Engineering Center (K-TEC)

### Overseas

- ▶ Germany / European Design & Engineering Center (E-DEC)
- ▶ Thailand / Thailand Tool Engineering Center (Ti-TEC)
- ▶ Shanghai / Shanghai Tool Engineering Center (S-TEC)
- ▶ U.S.A. / Americas Tool Engineering Center (A-TEC)
- ▶ Indonesia / Indonesia Tool Engineering Center (In-TEC)
- ▶ India Tool Engineering Center

## 1 Training

To make it easy for anyone to take part, the Centers offer training courses designed for a variety of different training objectives and participants.

\*Contact your nearest SEI sales office for detailed training curricula.

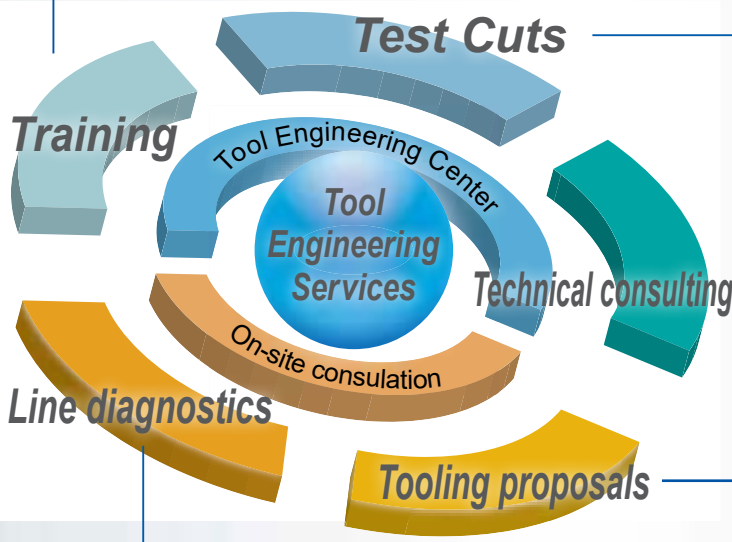

## 2 Performance evaluation technology

To attain improvements in machining on sites, manufacturers must rely on more than just the subjective guidance provided by experience and instinct. Today's advanced measuring instruments can make machining phenomena observable, and clarify problems.

## 3 Test cuts and technical consulting

The Tool Engineering Centers can make test cuts on user workpieces, and work with users to create more detailed technical proposals. The Centers can also provide solutions to various machining problems, general line diagnostics for machining lines, and tooling support for new lines.

\*Contact your nearest SEI sales office for more information.
