

An abstract geometric illustration featuring a large, stylized figure-eight shape composed of intersecting circles and arcs. The figure is rendered in shades of gray and black, with fine radial lines suggesting a metallic or polished surface. The background is a solid red color. On the right side, the word "WINE" is written vertically in a bold, sans-serif font, with each letter in a separate rectangular box. Below "WINE", the word "REAM" is also written vertically in a similar style, with each letter in a separate rectangular box.

## PRE-REAM DRILL SIZE TABLE FOR REAMING

Material	$\varnothing$ up to 6 mm	$\varnothing$ up to 10 mm	$\varnothing$ up to 16 mm	$\varnothing$ up to 25 mm	$\varnothing$ over 25 mm
Steels up to 700 N/mm <sup>2</sup>	0,1 - 0,2	0,2	0,2 - 0,3	0,3 - 0,4	0,4
Steels 700 - 1000 N/mm <sup>2</sup>	0,1 - 0,2	0,2	0,2	0,3	0,3 - 0,4
Cast steel	0,1 - 0,2	0,2	0,2	0,2 - 0,3	0,3 - 0,4
Cast iron GG	0,1 - 0,2	0,2	0,2 - 0,3	0,3 - 0,4	0,3 - 0,4
Cast iron GGG	0,1 - 0,2	0,2	0,3	0,3 - 0,4	0,4
Copper	0,1 - 0,2	0,2 - 0,3	0,3 - 0,4	0,4	0,4 - 0,5
Brass - Bronze	0,1 - 0,2	0,2	0,2 - 0,3	0,3	0,3 - 0,4
Light alloys	0,1 - 0,2	0,2 - 0,3	0,3 - 0,4	0,4	0,4 - 0,5
Plastics, hard	0,1 - 0,2	0,2	0,4	0,4 - 0,5	0,5
Plastics, soft	0,1 - 0,2	0,2	0,2	0,3	0,3 - 0,4

Stock allowance (recommended values in mm)

Due to the efficient action of the spiral, the values for quick spiral reamers may be increased by 50 to 100%.

## APPLICATION INDICATIONS AND SOLUTIONS FOR REAMING

Problem	Cause	Solution
Diameter is too large	<ul style="list-style-type: none"> <li>• Cutting speed is too high</li> <li>• Feed rate is too high</li> <li>• Insufficient lubricating coolant delivery</li> <li>• Incorrect lubricating coolant composition</li> <li>• Point is too short or very uneven</li> <li>• Tool or machine spindle rotation incorrect</li> <li>• Due to low-density or flexible structure, the working material enlarges</li> </ul>	<ul style="list-style-type: none"> <li>• Reduce cutting speed</li> <li>• Reduce feed rate</li> <li>• Ensure good lubricating coolant delivery</li> <li>• Ensure correct lubricating coolant composition</li> <li>• Lengthen point or reduce point angle</li> <li>• Centrally clamp or guide the reamer. Use a reamer chuck</li> <li>• Reduce reamer diameter</li> </ul>
Diameter is too narrow	<ul style="list-style-type: none"> <li>• Cutting speed is too low</li> <li>• Feed rate is too low</li> <li>• Chip removal rate is too low</li> <li>• Point is too long</li> <li>• Tool is ground smooth</li> <li>• The working material is of high density or has an inflexible structure</li> <li>• Reamer of insufficient size</li> <li>• Too much heat created when reaming.</li> <li>Shrinking borehole</li> <li>• Tool diameter too small</li> </ul>	<ul style="list-style-type: none"> <li>• Increase cutting speed</li> <li>• Increase feed rate</li> <li>• Increase machining allowance</li> <li>• Select a smaller point</li> <li>• Check the tool and replace in good time</li> <li>• Increase reamer diameter</li> <li>• Select a higher allowance</li> <li>• Increase lubricating coolant delivery</li> <li>• Select the correct diameter</li> </ul>
Heavy wear	<ul style="list-style-type: none"> <li>• Insufficient size</li> </ul>	<ul style="list-style-type: none"> <li>• Select a larger diameter</li> </ul>
Borehole is not round or is conical	<ul style="list-style-type: none"> <li>• Incorrect positioning in the machine spindle</li> <li>• Alignment error between the tool and the borehole</li> <li>• Asymmetrical point angle</li> <li>• Incorrect tool run-out</li> <li>• Clearance angle too great</li> <li>• Point is not round</li> <li>• Insufficient guide</li> </ul>	<ul style="list-style-type: none"> <li>• Check the spindle and correct its position</li> <li>• Use front-cutting reamers</li> <li>• Re-sharpen point angle</li> <li>• Centrally clamp tool, use reamer chuck and guide</li> <li>• Reduce clearance angle when re-sharpening</li> <li>• Evenly sharpen and round the point</li> </ul>
Poor surface quality	<ul style="list-style-type: none"> <li>• Worn tool</li> <li>• Front rake angle is too small</li> <li>• Cutting speed is too low</li> <li>• Feed rate is too low</li> <li>• Workpiece tends to stick (built-up edge)</li> <li>• Cutting exit is sharp-edged</li> <li>• Insufficient lubricating coolant delivery</li> <li>• Incorrect lubricating coolant composition</li> <li>• Cutting is uneven</li> <li>• Defective point</li> </ul>	<ul style="list-style-type: none"> <li>• Replace or re-sharpen tool in good time</li> <li>• Re-sharpen correctly</li> <li>• Increase cutting speed</li> <li>• Increase feed rate</li> <li>• Increase clearance angle and front rake angle; use highly fluid lubricant</li> <li>• Round and smooth the borehole exit</li> <li>• Ensure good lubricating coolant delivery</li> <li>• Ensure correct lubricating coolant composition</li> <li>• Grind the point and guide piece to an evenly round shape or to a tapered shape</li> <li>• Finely smooth or lap the point round and smooth the guide piece joint</li> </ul>
The tool jams and breaks	<ul style="list-style-type: none"> <li>• Borehole is too narrow</li> <li>• Bevel width is too great</li> <li>• Shaft is too short</li> <li>• Worn tool</li> </ul>	<ul style="list-style-type: none"> <li>• Reduce material cross-section</li> <li>• Check the tool and replace if necessary</li> <li>• Check the tool and replace if necessary</li> <li>• Replace or re-sharpen tool in good time</li> </ul>
Borehole exit too narrow	<ul style="list-style-type: none"> <li>• Feed rate when removing the reamer from the borehole is too high</li> </ul>	<ul style="list-style-type: none"> <li>• Reduce feed rate shortly before passing through or use even feed rate</li> </ul>
Broken off or deformed driver	<ul style="list-style-type: none"> <li>• Incorrect position between shaft and clamping device</li> </ul>	<ul style="list-style-type: none"> <li>• Keep shaft and clamping device clean and undamaged</li> </ul>
